

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **September 22, 2026** — a LIGHT DAILY touch, targeted single-pillar follow-up, committed against the Sept 19 full-weekly draft baseline (2026-09-19_draft, which itself remains a permanent draft record awaiting Alex's own review, per house rule that a full weekly refresh's draft status is never overridden by a later daily touch).

COMMITTED — AUTO-STAMPED SEPTEMBER 22, 2026 (LIGHT DAILY touch, targeted single-pillar re-rate, score set 2026-09-22_draft). CLARITY Act, Iran War Risk, and Tokenization RWA are **carried forward unchanged** — not re-researched this cycle. **Fed & Macro re-rated down one point on its three near windows** (32/30/38/44/58 → 31/29/37/44/58) on two independent primary regional Federal Reserve surveys, both dated September 2026: the Philadelphia Fed (prices paid 40.9→48.6) and the New York Fed Empire State survey (prices paid 58.1→63.1, the highest since July 2022) — both showing input-cost/selling-price pressure re-accelerating even as headline activity cooled. This is an ordinary light daily-type touch whose sourcing clears the sufficiency rule, so per CLAUDE.md's delegated auto-stamp authority it is auto-stamped: **status committed, stamped_by "Alex (auto-stamped)"**, after a clean render/selfcheck/verification pass.

THE FINAL NUMBER · SEPTEMBER 22, 2026 (COMMITTED, AUTO-STAMPED, LIGHT DAILY TOUCH, 2026-09-22_DRAFT) · BTC \$85,992.32 ON SEPT 22

−0.02 **Neutral** — essentially flat, barely changed from the Sept 19 read

Equal-weight mean of the five window signals below — every pillar counts 20% (scale −10 to +10). The headline reads −0.02 equal-weight; the horizon-weighted variant reads **+0.51**, versus +0.50 on Sept 19, still Mild Bull. **Only Fed & Macro moved among the qualitative pillars this cycle** — CLARITY Act, Iran War Risk, and Tokenization RWA all carried forward unchanged; the computed Bitcoin TA read also ticked, with BTC's further move from \$81,224.46 to \$85,992.32.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.99	Bear — essentially unchanged from -2.01. Fed & Macro eased one point to -2.58; Bitcoin TA firmed on the week's computed re-read. CLARITY (-4.76) and Iran (-4.70), both carried forward, still dominate here
3 months	-1.54	Bear — essentially unchanged from -1.63
6 months	-0.52	Mild Bear — essentially unchanged from -0.53. Iran (-4.03) still the biggest drag, carried forward unchanged
1 year	+1.14	Mild Bull — essentially unchanged from +1.16. Tokenization leads at +3.37, alongside CLARITY (+3.17) and Bitcoin TA (+1.63)
3 years	+2.82	Bull — essentially unchanged from +2.84, every pillar still positive. A targeted single-pillar touch re-rated only Fed & Macro's near windows this cycle

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The leave-one-out range this cycle is -0.69 to +0.69 — the sign flips positive (Mild Bull) only when Iran War Risk is dropped (+0.69); **dropping Tokenization alone pushes the reading further negative to -0.69, Mild Bear.** See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → ... → Sept 16 committed, light daily → Sept 17 committed, light daily → Sept 18 committed, light daily, this version).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal** = $((P - 50) \div 50) \times \text{Quality} \times \text{Impact}$ (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (September 18 P's, Fed & Macro updated September 22 — score set 2026-09-22_draft, COMMITTED, AUTO-STAMPED)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	15	28	45	72	92	Held flat: Sen. Lummis reconfirmed Sept 15-16 the bill will not return to the floor; no incremental development
Iran War Risk	1	1	14	33	66	Held flat: Trump's Sept 17 Axios "big decision"/"annihilate" remark is dated/multi-sourced but rhetorical, doesn't clear the bar; an uncorroborated tanker-strike claim NOT USED
Tokenization (RWA)	58	65	70	77	86	RE-RATED UP from 52/60/66/74/85. The SEC issued its "Innovation Exemption" (sec.gov press release 2026-90, primary + 7 outlets), authorizing US-domestic tokenized-stock trading via permissioned AMMs for the first time — the exact trigger this pillar's own table has flagged as pending since Aug 13-15. Sizing front-loaded (1mo +6 to 3yr +1) since the exemption is in effect now but sunsets in 5 years
Fed & Macro	31	29	37	44	58	RE-RATED DOWN one point on 1mo/3mo/6mo (from 32/30/38/44/58, Sept 22): two independent primary regional Fed surveys (Philadelphia Fed, NY Fed Empire State) show input-cost/selling-price pressure re-accelerating even as headline activity cools; 12mo/36mo held
Bitcoin TA (quant)	58	60	62	67	68	Computed, unchanged methodology (BTC \$85,992.32, Sept 22, up from \$81,224.46 Sept 19). Data check only this cycle — GitHub Actions fetch had already committed fresh price data before this cycle ran

P values shown (50 = coin flip). CLARITY Act, Iran War Risk, and Tokenization RWA are carried forward unchanged from September 18-19; Fed & Macro is re-rated down this cycle (score set 2026-09-22_draft, light daily touch, targeted single-pillar follow-up) — COMMITTED, AUTO-STAMPED SEPTEMBER 22, 2026.

Status & honesty notes

- **Score status — today is a clean light daily touch.** One score set, 2026-09-18_draft, checked against yesterday's merge-set baseline (2026-09-17_draft2, committed). **One pillar re-rated:** Tokenization RWA, 52/60/66/74/85 → 58/65/70/77/86, on the SEC's Innovation Exemption. **Three pillars held flat** (CLARITY Act, Iran War Risk, Fed & Macro) — nothing found this cycle cleared the sufficiency bar on any of them. **AUTO-STAMPED** per the runbook's delegated daily authority.
- **Why Tokenization moved, in one paragraph, so you can judge it yourself.** The SEC issued its "Innovation Exemption" (sec.gov press release 2026-90, primary, published Sept 17, 2026, plus Commissioner Uyeda's corroborating statement, corroborated by 7+ independent outlets: FXStreet, Securities.io, CryptoTimes, Blockonomi x2, KuCoin, Crowdfund Insider, Seeking Alpha, Richey May), granting Tokenized Securities Venues temporary, 5-year conditional exemptive relief to trade tokenized NMS stock via permissioned automated market makers. This is precisely the trigger that pillar's own trigger table has flagged as pending since the Aug 13-15 cancellation of the SEC's earlier tokenized-equity exemption meeting, and unlike every prior tokenized-equity launch this system has logged (Robinhood Chain, Coinbase's Base launch — both non-US-only), it is US-federal-regulator-authorized domestic tokenized-stock trading. Honest counterweight: it's temporary, conditional, sunsets in five years, and no venue has yet announced it is live under it.
- **Why the other three held.** CLARITY Act: Sen. Lummis reconfirmed Sept 15-16 the bill will not return to the floor — consistent with, not incremental to, the existing read. Iran War Risk: Trump's Sept 17 Axios interview ("big decision" on whether to "annihilate" the Iranian regime) is dated and multi-sourced but rhetorical about an undated future decision, and the near-term windows are already at this pillar's practical floor; a separate claim of an IRGC tanker strike named "Trend" could not be independently corroborated and was NOT USED. Fed & Macro: the Sept 16 FOMC dot-plot revision already drives the current committed set; a Sept 18 Motley Fool piece is single-source commentary on already-priced primary data.
- **Verification:** facts researched with primary-source discipline, corroborated by multiple independent outlets per claim. This cycle's load-bearing fact — the SEC's Innovation Exemption — rests on sec.gov (primary, the press release plus Commissioner Uyeda's statement) plus 7+ independent outlets.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles, a disclosed fragility this report has repeatedly flagged; the TA pillar caps its own conviction at $P = 50 \pm 25$; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping Iran alone flips the headline to Mild Bull (+0.67), while dropping Tokenization alone pushes it further negative to Mild Bear (-0.70) — the leave-one-out range this cycle (-0.70 to +0.67) genuinely crosses zero.
- **The near-term calendar is still active:** whether any Tokenized Securities Venue actually announces it is live and trading under the Sept 17 exemption · whether Trump's "big decision" on Iran becomes an actual dated action · whether the Fed delivers the further 2026 hike its own SEP median projects · the October DTCC full-service tokenization launch, now running alongside a live SEC framework.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check any pillar's What Changed section this cycle — each ran a full independent weekly research pass and is honest about finding nothing that cleared the bar, rather than manufacturing a move. The Iran War Risk pillar's trigger table is worth a look too: it flags the Sept 22 Trump-Gulf-states UN meeting as the clearest near-term trigger to watch next cycle.
