Bitcoin Technical Analysis Quant Pillar Report

The Tape Itself — Measured, Scored, and Mapped to the Pillar Standard

*Machine-computed from 16 years of daily price data through a 7-indicator scoring stack, halving-cycle analogs, and a power-law valuation model. Every number is reproducible from the scripts in the BTC-TA folder. **These numbers are computed, not judged, so they carry no draft/committed status of their own — they enter the master blend directly. This cycle's active qualitative score set is 2026-09-22_draft, a LIGHT DAILY touch — Fed & Macro was re-rated on fresh primary-source Federal Reserve survey data; CLARITY Act, Iran War Risk and Tokenization RWA carry forward unchanged — COMMITTED, AUTO-STAMPED SEPTEMBER 22, 2026. See those pillar reports for the full research trail. This quant pillar's own output is unaffected by qualitative status and enters the master blend the same way regardless.***

COINPICKS QUANT PILLAR REPORT · THE QUANTITATIVE SLEEVE OF MY THESIS

Data through September 22, 2026 (BTC \$85,992.32) · Pipeline data refreshed via GitHub Actions; digest read via run.py numbers & verified September 22, 2026 (qualitative set: LIGHT DAILY touch, 2026-09-22_draft, draft — awaiting Alex's stamp) · Not Financial Advice

The Scores — September 22 Model Output

Computed September 22, 2026 (previous computed run September 21, 2026) — same standard as every qualitative pillar. This cycle the weekly bar closed (Sept 20); monthly and quarterly bars remain PARTIAL, and both as-is and completed-bar readings are quoted together throughout.

WINDOW	MODEL P	QUALITY	IMPACT	SIGNAL	CALL
1 month	58	0.75	8	+0.96	Mild Bull — the weekly close above the 200-week MA remains confirmed; the newly-forming week reads +60.2 as-is, +46.5 on completed bars; 1mo analog reads 1-of-3 positive, median −5.8%
3 months	60	0.70	8	+1.12	Mild Bull — the 3mo analog reads unanimous 3-of-3 positive, median +12.2%
6 months	62	0.55	8	+1.06	Mild Bull — unanimous 3-of-3 positive, median +59.0%
1 year	67	0.60	8	+1.63	Bull — the cycle turn; every prior cycle at this exact month was higher a year later (3-of-3), median +85.8%
3 years	68	0.50	8	+1.44	Bull — value + cycle (36-month analog 3-of-3 positive, median +1340.2%)

Impact: 8 (the tape aggregates every driver, but adds no causal force of its own) · **Formula:** Signal = ((P − 50) ÷ 50) × Quality × Impact · **Honesty cap:** P = 50 + 25 × (window score ÷ 100) — pure TA never claims odds more than 25 points from a coin flip, because its measured out-of-sample edge is modest. Math machine-verified.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds the tape is *good for Bitcoin* by then. Near-term still confirmed on a completed-bar basis, and the newly-forming week reads \$85,992.32 (weekly composite as-is +60.2/100, Moderate bullish, agreement 6-of-7; completed-bar weekly composite now +46.5, up from +31.3 after the Sept 20 close); long-term still high (at this exact point in prior cycles, the next 12 months were positive 3-for-3, median +85.8%, and price sits ~39% below its power-law fair value).

Quality — how trustworthy the evidence is. Highest near-term (weekly bars of history feeding the indicator stack), lowest at 3 years (only 3 completed cycles to learn from, and this cycle is already breaking the old pattern).

Impact — 8 out of 10, now the uniform value shared by every pillar; the TA pillar carries an equal 20% weight in the master, same as each qualitative pillar. Price is the thing itself — but a mirror, not an engine.

The Claim

The thesis, and where the numbers differ from the mood

The crowd: this cycle is a light daily touch — only Fed & Macro was re-rated, on fresh primary-source Federal Reserve survey data; CLARITY Act, Iran War Risk and Tokenization RWA carried forward unchanged — and the real story since this pillar's last refresh is the tape itself. (Price sits at \$85,992.32, up from \$81,224.46 on Sept 19 — a +5.9% gain, and +46.9% off the June 30 low; the tape doesn't know why price moved, only that it did.)

The model: the short-term tape firmed with the price move — the weekly composite (as-is) reads Moderate bullish (+60.2, agreement 6-of-7), the monthly composite reads Slight bullish (+20.1, agreement 3-of-7), and the quarterly composite reads Slight bullish (+33.0, agreement 5-of-7). The weekly bar closed Sept 20, so the completed-bar

weekly composite moved to +46.5 (from +31.3); monthly and quarterly bars remain unclosed (both close Sept 30), so their completed-bar composites are unchanged: monthly +1.8, quarterly +7.7. Repair Signal #1 (a weekly close above the 200-week MA) stays confirmed, and price sits further above the 50-week MA (\$78,208, +10.0%). The 1-month window reads Mild Bull (P 58) with its cycle analog at 1-of-3 positive (median -5.8%); 3 months firmed to Mild Bull (P 60) with its analog now unanimous (3-of-3 positive, median +12.2%). The 6-month window reads Mild Bull (P 62) with the analog still unanimous (3-of-3 positive, median +59.0%). The long read sits at 1yr (67) and 3yr (68): every prior cycle at this exact month was higher 12 months later (median +85.8%), price is ~39% below fair value (\$140,906), and the froth that precedes real crashes remains absent.

The edge: the model reads three separate clocks that don't take a position on the news cycle — tape (confirmed at the weekly level, and now firming further), cycle clock (bottoming window: prior cycles bottomed at months 26–30; we're at month 29.11, past the average-bottom date), and valuation (~39% below the power-law fair line, with price sitting above the -1σ "cheap" band at \$70,378). All three clocks point the same direction on the medium-to-long horizon — the near-term clock is the one doing the day-to-day flexing, exactly as its lower Quality input says it should.

The Facts — The Tape

*Computed September 22, 2026 from daily data (BTC \$85,992.32, daily close as of September 22). The weekly bar closed Sept 20; monthly and quarterly bars are still forming — scores use them as-is. Quantified: on completed bars only, the weekly composite is **+46.5** (a new week is now forming, closing 2026-09-27); monthly +1.8 and quarterly +7.7 (both bars closing 2026-09-30) are unchanged. Both readings are quoted deliberately — the as-is figure includes a bar that has not finished.*

- **Weekly composite +60.2/100 (Moderate bullish), agreement 6-of-7 indicators** — firmed further with price; on completed bars only it reads +46.5, and both must be quoted together because the current bar is still forming. Price is above the 20-week (\$70,397, +22.2%) and well above the **200-week average (\$65,844, +30.6%)**; price sits above the 50-week (\$78,208, +10.0%). RSI 62.8; MACD line +992 with histogram positive (+2,889) — momentum repair continuing; %B 1.00.
- ★ **Repair signal #1 (a weekly close above the 200-week MA) remains CONFIRMED.** Price (\$85,992.32) sits +30.6% above the 200-week average (\$65,844). The weekly bar closed Sept 20, moving the completed-bar weekly composite to **+46.5** (from +31.3); a new week is now forming, closing 2026-09-27.
- **Monthly composite +20.1/100 (Slight bullish), agreement 3-of-7** — firmed with price. Below the 20-month average (\$87,400, -1.6%), above the 50-month (\$62,305, +38.0%); RSI 54.3; monthly MACD line +913 with histogram -3,252 — still negative; %B 0.48. Completed-bar monthly composite (August's closed bar) holds at +1.8, unchanged.
- **Quarterly composite +33.0/100 (Slight bullish), agreement 5-of-7** — firmed with price and the cycle-month clock. Comfortably above the 20-quarter average (\$58,522, +46.9%) and the 50-quarter (\$28,885, +197.7%); RSI 59.0, MACD line +16,822 with histogram +43. Completed-bar quarterly composite is +7.7, unchanged (current bar dated 2026-09-30, still forming).
- **Levels that matter:** price (\$85,992.32) sits just below overhead resistance at \$89,164 (+3.7%, 1x touch) — the nearest test on the board — then \$98,090 (+14.1%, 2x) and \$108,330 (+26.0%, 3x). Support sits at \$81,685 (-5.0%, 2x touch), then \$74,434 (-13.4%, 1x) and \$59,930 (-30.3%, 1x) further below. The falling weekly support trendline sits at \$40,880; the falling resistance trendline sits at \$73,991, now well below current price.
- ★ **June 30 remains the cycle low: \$58,526 close** — the flush tagged the Fib golden pocket (\$54,257–\$57,802 = 61.8–65% retrace of the \$15,479 → \$126,272 run) and has since built a **+46.9% bounce to \$85,992.32. \$58,526 is still the line in the sand** — a decisive break back below it would undo this entire recovery leg.

Weekly tape, scored +60.2/100 as-is (Moderate bullish, +46.5 on completed bars only) with agreement 6 of 7 indicators: the weekly close above the 200-week MA remains confirmed, MACD histogram remains positive, price further above the 50-week MA. Machine-annotated from the same data that feeds the scores.

The Facts — The Cycle Clock & The Value Floor

The two slower clocks. Same data, longer lenses.

- **The halving clock says "bottoming window."** The three completed cycles topped 12–18 months after their halving (avg 15.8) and bottomed at months 26–30 (avg 28.4). This cycle topped at month 18 (Oct 6, 2025 — \$124,728) and printed its low-so-far at month 26 (June 30, \$58,526, –53% from the top). **We are at month 29.11 — past the average-bottom date.**
- ★ **The cycle analogs are the spine of the long-window scores.** Standing at this exact cycle-month in C1/C2/C3: next 1 month positive **1-of-3** (median –5.8%) · next 3 months positive **3-of-3** (median +12.2%) · next 6 months positive **3-of-3** (median +59.0%) · next 12 months positive **3-of-3** (median +85.8%) · next 36 months positive **3-of-3** (median +1340.2%). *Fragility disclosure: the medians and agreement counts move as the cycle-month clock advances; treat the analog levels as soft, the direction as the signal. And know what the 36-month number is: from month ~29 that window reaches month ~65 — it contains the NEXT halving's rally.*
- **1-year momentum turned positive at months 34–37 in every completed cycle (avg 35.5) → still projects to ~April 2027 for this cycle.**
- **The power-law floor:** a log-log fit over the full price series puts fair value at **\$140,906** — price is **–39%** versus fair. Fit-window honesty: starting the fit in 2011, 2012, 2013, or 2015 instead moves fair value materially (\$130,600 / \$135,517 / \$118,732 / \$145,586) — the level is soft, but the **"well below fair" verdict holds across every window tested**. Price (\$85,992.32) sits above the **–1σ band (\$70,378)** — out of the "cheap" zone (the –2σ band sits at \$35,152, far below). Every halving-era cycle trough was –77% to –85% from ATH (\$18.7K–\$28.7K

equivalent today) — the pre-halving 2011 bear went $\sim -93\%$ ($\sim \$8.7K$ equivalent), excluded from the range but in the data; this cycle's low-so-far was -53% from the ATH.

- **No froth in the system:** the altcoin-froth index reads $z = -0.87$ — the opposite of the euphoric signature that preceded prior deep crashes. Validated on 16 years of data: high-froth days led to -39% average 12-month drawdowns vs -23% for low-froth days (gap significant, 95% CI excludes zero). *Data lags ~ 6 weeks (through May 23, unchanged)* — used as a tilt, not a score input.
- ★ **What we rejected:** a 5-feature logistic crash model was tested leave-one-cycle-out and **failed** (AUC 0.44 vs 0.58 for froth alone; 0.70 = useful). It is not in this report's numbers. The scores rest only on what survived out-of-sample testing.

All four halving cycles aligned (log scale, price ÷ price-at-halving). Triangles mark where 1-year momentum turned positive in each prior cycle — months 34–37, projecting to $\sim$ April 2027 for this one. The red dot is today: month 29.11, past the historical bottoming window.

The downside map, updated after the June 30 flush: the projected \$54K–\$61K bottom zone was hit (\$58,526 close / \$57,735 intraday, inside the golden pocket's doorstep) and bounced. Odds re-weighted accordingly: ~40% the low is in, ~35% one more flush to \$54–\$58K, ~17% deeper bear, ~8% tail.

The Prize

Illustrative only — not price targets, not advice

From \$85,992.32: the 20-week average (~\$70.4K) is well behind us — price sits **+22.2%** above it; the 50-week average (\$78,208) is further behind, price sitting **+10.0%** above it. A retest of the \$124,728 ATH is **+45.1%**; the power-law fair line is **+63.9%**. The median 12-month analog from this cycle-month is now **+85.8%**; the median 36-month analog is +1340.2% — **discount that one hard**, it leans on regimes (2017 mania, post-COVID ZIRP) that don't repeat on demand.

The Prize doesn't feed the math — it tells you what the lean is worth acting on. Here it says: the near-term signal remains confirmed on a completed-bar basis and holds Mild Bull (1mo P 58) in a cycle where the only qualitative move was a targeted Fed & Macro re-rate — this stretch's price move is the tape's own, not that catalyst's; the near quarter has firmed to Mild Bull (3mo P 60, analog now unanimous), and the 6-month-and-beyond case remains unanimous (3-of-3) and firm (6mo P 62).

The Other Side

The strongest honest case the model is wrong

- **n = 3.** Every long-window claim rests on three completed cycles. Three coin flips landing heads is not a law of nature.
- **This cycle already broke the pattern.** A -53% drawdown at month 26 vs -77/-85% in prior cycles could mean dampened cycles (bullish read) — or it could mean *the bottom isn't in*: a historic-depth trough from this ATH is \$18.7K–\$28.7K, far below every level in this report.

- **The ETF era changed the machine.** Prior cycles had no spot-ETF flow channel, no CME basis trade at this scale, no corporate treasuries. Analogs may simply not transfer.
- **The power law is a curve fit, not a promise.** R^2 0.96 in-sample says nothing about a structural break — a fit like this "said cheap" through most of 2022's decline too. It bounds scenarios; it doesn't time anything.
- **The tape's edge is small by construction.** The honesty cap exists because measured predictive validity is modest (froth AUC 0.58). If you removed the cap, this report would be louder — and less true.

The Triggers

Price and dated events — some prove the read right, some prove it wrong

WHEN / LEVEL	EVENT	MEANS
\$58,526	Daily close below the June 30 low	Flush scenario live — golden pocket \$54.3–57.8K is the target; re-rate 1/3-month down
~\$65,844	Weekly close above the 200-week MA	CONFIRMED — price sits +30.6% above this level; the weekly bar closed Sept 20, moving the completed-bar weekly composite to +46.5 (from +31.3); a new week is now forming, closing Sept 27
~\$78,208	Weekly close above the 50-week MA	CONFIRMED — price sits +10.0% above it on the Sept 20 weekly close, extending trend repair further
~Aug 31, 2026	Historical average-bottom month (28.4) has now passed (we're at month 29.11)	Price sits well off the June 30 low (+46.9%); a higher low + improving monthly momentum after this date = basing confirmed — August's completed monthly bar (+1.8) is an early such sign
Jan–Jul 2027	Projected 1-yr momentum turn window (point: ~Apr 2027)	Arriving without new lows = cycle thesis on track; re-rate 1-year up
\$50,000	Weekly close below	–60% from ATH; the dampened-cycle story is failing — see the flip line

The flip line: a decisive weekly close below **\$50,000** breaks the base case and the golden pocket both — treat the dampened-cycle thesis as broken and put the historic trough zone (\$18.7K–\$28.7K) back on the table. Above it, a bearish quarter is the plan, not a surprise.

My Decision

QUALITATIVE SET: COMMITTED — AUTO-STAMPED SEPTEMBER 22, 2026 (2026-09-22_draft, LIGHT DAILY TOUCH) · THIS PILLAR: COMPUTED SEPTEMBER 22, 2026 (NO DRAFT/COMMITTED STATUS OF ITS OWN)

Computed P: 58 / 60 / 62 / 67 / 68 · Quality: 0.75 / 0.70 / 0.55 / 0.60 / 0.50 · Impact: 8

This is the quantitative sleeve of the thesis — the same five windows, same formula, same table as every qualitative pillar, but computed instead of judged. The weekly bar closed Sept 20 (the completed-bar weekly composite moved to +46.5, from +31.3), and the as-is weekly composite firmed further to +60.2 (6-of-7) with price. The 1-month window holds Mild Bull (P 58) with its cycle analog at 1-of-3 positive (median −5.8%) as the cycle-month clock advanced to 29.11. The 6-month window reads Mild Bull (P 62) with its analog still unanimous (3-of-3 positive, median +59.0%). The 3-month window firmed to Mild Bull (P 60), its analog now unanimous (3-of-3 positive, median +12.2%). The long read sits at 1yr (67) and 3yr (68) — the direction, not the level, is the signal.

These numbers enter the master blend exactly as computed — this pillar has no override/re-stamp step of its own. Unlike the four qualitative pillars, this pillar carries no draft/committed status of its own: this cycle's active qualitative score set is 2026-09-22_draft, a LIGHT DAILY touch — Fed & Macro was re-rated on fresh primary-source Federal Reserve survey data; CLARITY Act, Iran War Risk and Tokenization RWA carry forward unchanged — COMMITTED, AUTO-STAMPED SEPTEMBER 22, 2026. This pillar's own computed output is unaffected by that process and enters the master blend the same way it does every cycle.

What Changed Since Last Check

Pipeline data refreshed September 22, 2026 via GitHub Actions (previous computed run September 21, 2026; this pillar's own report was last refreshed September 19, 2026, so figures below reflect the full catch-up since then).

- **Today's refresh in one line:** this is a light daily touch syncing this pillar's price/indicator snapshot to current. BTC moved from \$81,224.46 (Sept 19) to **\$85,992.32** (Sept 22), a +5.9% gain, and the model P moved from 56/55/60/68/69 to **58/60/62/67/68**.
- **No data revision this cycle:** this cycle read the current GitHub Actions relay data already committed to the repo — no conflicting prior-close values to disclose.
- **Price: \$81,224.46 (Sept 19) → \$85,992.32 (Sept 22).** A +5.9% gain over the intervening cycles — price extended further above the 50-week MA; this pillar scores the tape, not the day's qualitative news, and only Fed & Macro was re-rated this cycle (a separate, targeted pillar touch), so this move is the tape's own.
- ★ **Repair signal #1 remains CONFIRMED:** price sits +30.6% above the 200-week average (\$65,844). The weekly bar closed Sept 20, moving the completed-bar weekly composite to +46.5 (from +31.3).
- **The weekly bar closed Sept 20; monthly and quarterly bars remain unclosed.** Completed-bar composites: weekly **+46.5** (up from +31.3), monthly **+1.8** (unchanged), quarterly **+7.7** (unchanged). The now-forming (as-is) composites read: weekly **+60.2** (agreement 6/7, bar closes Sept 27), monthly **+20.1** (agreement 3/7), quarterly **+33.0** (agreement 5/7). Both readings must be quoted together because the current bars are PARTIAL.
- **Model P vs Sept 19: 56/55/60/68/69 → 58/60/62/67/68.** The cycle-month clock advanced to **29.11**; the 1-month analog reads 1-of-3 positive (median −5.8%), the 3-month analog is now unanimous (3-of-3 positive, median +12.2%), and the 6-month analog remains unanimous (3-of-3, median +59.0%). Honesty note, unchanged: analogs rest on **n=3 completed cycles** and single windows flip when alignment shifts by days — the direction is the signal, the levels are soft.
- **Power-law fair value: \$140,631 (Sept 19) → \$140,906 (Sept 22)** (price now −39% vs. fair, up from −42%, on the real price gain) — normal drift as new daily bars extend the fit. Fit-window sensitivity this cycle spans

\$118,732 (2013 start) to \$145,586 (2015 start): quote it as a range, never a target.

- **Froth unchanged at $z = -0.87$** , still dated 2026-05-23 — Coin Metrics community data lags ~6 weeks, so this stays a robustness tilt, never a score input.
- **Data refreshed:** daily price data through September 22, 2026 via the GitHub Actions relay; indicators/levels/scores/cycle/mapping read via `run.py` numbers.
- **Context:** this cycle's active qualitative score set is **2026-09-22_draft**, a LIGHT DAILY touch, DRAFT and awaiting Alex's manual review, in which Fed & Macro was re-rated on fresh primary-source Federal Reserve survey data while CLARITY Act, Iran War Risk, and Tokenization RWA carried forward unchanged. This quant pillar is computed fresh every run regardless of qualitative status.

Method & Sources

Everything is reproducible — the scripts and data live in the BTC-TA folder. Run order below.

- **Price data:** Bitstamp OHLC API (daily, 2011–2026, no key) via [fetch_btc_history.py](#) · Coin Metrics community reference price (2010–2011 close-only) via [build_master_history.py](#) — 5,838 days total, each row tagged by source.
- **Indicator stack:** [indicators.py](#) — SMA 20/50/200, EMA 12/26, RSI-14 (Wilder), MACD 12/26/9, Bollinger 20/2, OBV — on weekly (W-SUN), monthly, quarterly bars. [levels.py](#) — swing-cluster S/R + least-squares trendlines.
- **Scoring:** [score.py](#) — each indicator → conviction in $[-100, +100]$ (bounded inputs mapped linearly, unbounded squashed with tanh); composite = fixed weights (MA .20, RSI .15, MACD .15, BB .15, S/R .15, OBV .10, TL .10); agreement = indicators sharing the composite's sign.
- **Cycle & value:** [cycle_analysis.py](#) — halving-aligned tops/bottoms/momentum turns, projections from C1–C3 · [downside.py](#) / [downside_map.py](#) — power-law bands (R^2 0.96) + historical troughs + 6-method bottom-zone synthesis · [test_altcoin_froth.py](#) — froth quartiles vs forward drawdowns, block-bootstrap CI.
- **The mapping (new):** [pillar_mapping.py](#) — window scores from tape composites + cycle analogs + power-law value; $P = 50 + 25 \times (S/100)$; Quality rubric per window; writes data/pillar_scores.json for the master blend.
- **Run order:** `fetch_btc_history` → `build_master_history` → `fetch_altcoin_data` → `indicators` → `levels` → `score` → `charts` → `cycle_analysis` → `downside` → `downside_map` → `pillar_mapping`.
- **Honesty notes:** monthly/quarterly bars are partial as of Sept 22 (completed-bar composites: weekly +46.5, following the Sept 20 close / monthly +1.8, August's bar having closed / quarterly +7.7, current bar still forming) · the multi-signal crash model failed out-of-sample (AUC 0.44) and is excluded · the AUC figures are the pipeline's own attestation · froth data lags ~6 weeks · $n=3$ on all cycle claims, and analog windows can cross into the next cycle · the 2024 halving is dated Apr 19 (US ET; block 840,000 hit Apr 20 00:09 UTC — 0.03 cycle-month effect) · S/R levels are algorithmic swing-clusters with 1–2 touches each · the bottom-odds split (40/35/17/8) is a judgment synthesis, not a model output.
