

The Fed & Macro Regime Pillar Report

Liquidity as the Master Driver — Researched, Scored, and Re-Rated

Originally written and scores committed by me on June 12, 2026. Fully re-researched July 8, 13, 18, 25, and 30, 2026, and again as a full weekly refresh on August 8, 2026 (re-rated up to a moderated 40/38/47/55/62 on the BLS July jobs report, committed and stamped by Alex). Re-rated up again August 13 to 43/41/48/56/62 on a cool CPI print and a weak claims print; held flat August 14, 16, and through two Aug 22 cycles (a catch-up draft, then the full weekly refresh) — committed and stamped by Alex August 23, 2026, the last true baseline. A same-day catch-up draft written August 28 (score set 2026-08-28_draft) re-rated down to 38/37/46/55/61 on Fed Chair Warsh's hawkish Jackson Hole speech and a hot July PCE print, but was **never rendered, selfchecked, archived, or committed** — it sits abandoned, superseded mid-cycle. **This version (August 29, score set 2026-08-29_draft) is a FULL WEEKLY refresh and goes further, re-rating down to 36/35/45/55/61.** A dedicated adversarial-verification pass this cycle caught a real error in the abandoned draft: its CME FedWatch September rate-hike-odds figure (~35.4%→~45.7%) UNDERSTATED the actual market move. Independent re-pull and cross-check — Motley Fool citing CME FedWatch directly at 57.5%, CNBC's own body text at "nearly 56%," and a third independent source at "55.7%" — shows the real post-speech reading clustered tightly in the high-50s, roughly 56-58%, not 45.7%. September hike odds are now past coin-flip, not just approaching it. Two fresh facts not in the abandoned draft: initial jobless claims for the week ended Aug 22 (DOL, primary, Aug 27) came in at 203,000 vs. 208,000 consensus, a mild hawkish-adjacent tightening signal; and the Aug 26 H.4.1 balance-sheet release (federalreserve.gov, primary) showed the same reserve-drain pattern continuing (reserve balances -\$10,351M w/w to \$2,924,936M; TGA -\$2,876M w/w to \$950,736M), logged but not independently trigger-worthy. This cycle also corrects the abandoned draft's price-action framing: BTC did NOT hold a stable tape through the speech — it opened Aug 28 around \$80,262, traded above \$81,000 pre-speech, then fell back sharply once Warsh spoke, closing \$79,613.44 that day, and continued falling to \$77,666.16 by today, Aug 29 (Bitstamp) — a real, visible reaction, not a shrug. **Net: the corrected, larger CME move justifies a deeper cut than the abandoned draft reached.** 1mo 43→36 (-7), 3mo 41→35 (-6), 6mo 48→45 (-3), 1yr 56→55 (-1), 3yr 62→61 (-1) — still minimal at the long end, since Warsh explicitly declined to commit to a reaction function and one repricing doesn't reach three years out. Left as draft at delivery, not auto-stamped: this is a FULL WEEKLY refresh, which the runbook's delegated daily auto-stamp authority categorically excludes regardless of move size — doubly so here since every window moved 7 points or fewer anyway. Flagged for Alex's manual review; see My Decision below. **THIS VERSION (August 31) is a light daily catch-up, score set 2026-08-31_draft**, covering Aug 29-31: CME FedWatch September hike odds continued drifting up post-Warsh (CNBC Aug 28: ~45.7%; CoinSpectator/Bitcoin.com Aug 30: ~57%; CNBC Aug 31 Jackson-Hole-roundup: ~60.4%, up from ~56% Friday) — directionally the same hawkish repricing already sized into the Aug 29 cut (which used a 56-58% cluster as its basis). Per the sufficiency rule, a market-odds drift alone, without a fresh primary data print or news event, cannot move P further. No new H.4.1 (next due Sept 3, last Aug 27) or jobless claims release landed in this window. **P HELD FLAT at 36/35/45/55/61.** This is a light daily touch, no window moved, no call band flipped — **AUTO-STAMPED** per delegated daily authority. **Sept 1: held flat again** — CME FedWatch September hike odds continued the same post-Jackson-Hole drift (Forbes/KuCoin ~66% at 11:40am ET Aug 31, up from the ~60.4% CNBC read this pillar's Aug 31 baseline used), but it's the same intraday drift sequence with no new primary print or news event behind it, so per the sufficiency rule it does not independently move P; no new H.4.1 or claims release landed (Aug 31 was Labor Day). Score set 2026-09-01_draft, AUTO-STAMPED, new last COMMITTED baseline. **Sept 2: held flat a further time** — no new H.4.1 or data print found dated Sept 1-2; September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continues the same post-Jackson-Hole drift already priced into the Sept 1 baseline, not a fresh data-driven move, so per the sufficiency rule it does not independently move P. Score set 2026-09-02_draft — this pillar's own P is unaffected, but because all four qualitative pillars share one dated score set and Iran War Risk's sharp re-rate this cycle flips the master call band (Mild Bull → Neutral) and needs Alex's manual review, the WHOLE 2026-09-02_draft set — Fed & Macro's flat P included — stays in DRAFT status, not committed, per house rule (see My Decision and the Iran War Risk pillar report); COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026 once Alex widened

the policy — this is the last TRUE committed baseline: 36/35/45/55/61. **Sept 3: held flat a further time** — light daily catch-up found nothing material on any of the four qualitative pillars; config/scores.json untouched, blend re-run against fresh quant data only. **Sept 5, light daily catch-up (score set 2026-09-05_draft): RE-RATED DOWN a modest further step, 36/35/45/55/61 → 32/31/43/54/60.** The August jobs report (BLS, primary, released Sept 4) beat sharply — nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady at 4.1% — and markets repriced September 15-16 FOMC hike odds higher off of it (CNBC, Yahoo Finance, TheStreet, U.S. News, Investing.com/Reuters — point estimates vary 60-66% by source/timestamp but are directionally consistent and higher than the Sept 2 baseline's "~60% hold" framing). Same-day reaction: 2yr Treasury yield +5.3bp to its highest since January 2025; Dow -0.51%, S&P -0.38%, Nasdaq -0.29%; BTC fell ~2% same-day (\$81,265.00 Sept 3 close → \$79,676.60 Sept 4 close). Fed officials remain split (Warsh hawkish; Waller says he'd lean toward holding if inflation improves), with the Sept 11 CPI print now flagged as the likely decider before Sept 15-16. Move sized comparably to the Aug 22-28 catch-up cut on the Warsh Jackson Hole speech alone (a comparable single dated catalyst): 1mo -4, 3mo -4, 6mo -2, 1yr -1, 3yr -1, no window over 8 points. **CORRECTION:** that cycle's commit message claimed "AUTO-STAMPED SEPTEMBER 5, 2026," but config/scores.json's status field was never actually advanced to committed — a bug in that session, flagged here and not corrected retroactively (stamping is Alex's call). **Sept 5, FULL WEEKLY refresh (2026-09-05_draft2), this version:** independently re-verified via WebSearch — Fed Governor Waller's genuinely dovish-leaning Sept 3 speech ("give disinflation a chance") briefly cut CME hike odds to ~48% (Semafor, CNBC, Bloomberg, PBS) before the Sept 4 jobs beat reversed that back up to 60-66% (Forbes/CME FedWatch), a net hawkish drift for the week consistent with the Sept 5 cut. No further Fed commentary or data since; the Sept 11 CPI print has not yet landed. **HELD FLAT at this cycle's re-rated level, 32/31/43/54/60. Full weekly refreshes are categorically excluded from the delegated daily auto-stamp policy regardless of move size — left for manual review, and COMMITTED BY ALEX SEPTEMBER 5, 2026. Sept 6: light daily catch-up, held flat.** Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4 (Governor Waller's dovish-leaning Sept 3 speech and the Sept 4 BLS August payrolls beat were already captured in the Sept 5 re-rate). September 6 is a Saturday — markets and the Fed's own calendar are quiet, no data or speeches scheduled. The September 11 CPI print remains the next dated catalyst and has not yet landed. **HELD FLAT at 32/31/43/54/60. Sept 8: light daily catch-up, held flat again.** Re-checked via WebSearch: no new Fed speech, data release, or FOMC commentary since Sept 3-4; the Sept 11 CPI print and the Sept 15-16 FOMC meeting remain the next dated catalysts, not pre-empted this cycle. **HELD FLAT at 32/31/43/54/60. Sept 9: light daily catch-up, held flat again.** Re-checked directly against CME FedWatch-citing coverage — September 25bp-hike odds read ~58.7% (as of Sept 7, CNBC/cryptonews), consistent with the ~56-58% cluster already priced into the baseline, not a fresh move; no new FOMC meeting, no new BLS/DOL primary release since Sept 3-4. The Sept 11 CPI print and Sept 15-16 FOMC remain the next dated catalysts. **HELD FLAT at 32/31/43/54/60. Sept 10: light daily catch-up (score set 2026-09-10_draft) vs the 2026-09-09_draft committed baseline.** Held flat at 32/31/43/54/60 — independently re-checked, nothing cleared the sufficiency bar. The Aug CPI release (due Sept 11) and the FOMC meeting (Sept 15-16) are both still pending per BLS/Fed calendars — no new primary data since Sept 9. The master FINAL NUMBER's call band did not flip anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted) — so per the runbook's delegated auto-stamp authority this set is **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."** **THIS VERSION (September 11, score set 2026-09-11_draft) RE-RATES UP, modestly, to 34/33/44/54/60.** This cycle deliberately held its research window open past 8:30am ET for the print this pillar has been flagging for a week, and the August CPI print landed on schedule at 8:30am ET: BLS's own release (bls.gov, primary, fetched directly and re-fetched to confirm) has headline CPI-U **+0.4% m/m SA** in August after +0.1% in July and **+3.4% y/y NSA**, with core (all items less food and energy) **+0.3% m/m** after +0.2% in July and **+2.4% y/y**; energy rose 2.1% m/m and gasoline 3.9%, accounting for over a third of the monthly increase, while shelter rose 0.3%. Against the consensus circulating pre-print (headline +0.4% m/m / 3.4% y/y; core +0.4% m/m / 2.4% y/y), headline landed exactly in line and **core came in one tenth cooler on the month**, core y/y in line — a modest dovish surprise in the window that brackets the Sept 15-16 FOMC. It is tempered, not clean relief: headline accelerated from +0.1% to +0.4% and the acceleration is energy-driven — the same oil shock that fires the Iran pillar's "sustained Brent > \$100" clause this cycle shows up here as headline inflation. Market-implied September hike odds circulating around the print (~70% for a 25bp move) are a market price, reported and not used to move P; the BLS release itself is the mover. Cross-source caution logged: several aggregator summaries of this print circulating within minutes carried figures inconsistent with the BLS release (e.g. a 3.1% core y/y) — discarded in favour of the primary document. Re-rated up on the windows bracketing the FOMC only: **1mo 32-34, 3mo 31-33, 6mo 43-44**; 12mo and 36mo held flat at 54/60 — a single in-line-to-a-tenth-cooler print does not move the multi-year regime read. **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."** **Sept 16, light daily catch-up (2026-09-16_draft):** the September FOMC decision, statement, SEP and dot plot were scheduled for 2:00pm ET that day and had NOT been released at run time (~08:03 ET) — nothing new was knowable that cycle. **HELD FLAT at 34/33/44/54/60, AUTO-STAMPED. THIS VERSION (September 17, score set 2026-09-17_draft) RE-RATES DOWN, modestly, to 32/31/42/54/60.** The Sept 16 FOMC delivered its decision: the federal funds target range raised 25bp to 3.75%-4.00%

(12-0 vote), the first hike in three years (*federalreserve.gov* statement, primary; corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape, and others). The hike itself was ~92.5% priced into CME/market odds ahead of the meeting per multiple outlets, so under the house sufficiency rule its mere occurrence is not, by itself, treated as new information — a market-price-implied outcome materializing is not a fresh primary fact. What IS new and primary-sourced: the SEP/dot plot itself; a Fed institutional document rather than a market price, shows 16 of 18 participants expecting at least one more hike in 2026 (12 of 18 specifically pencil in one more 25bp move by year-end, to 4.125%), plus a slower, more cautious rate-descent path through 2027-2028 than previously projected, with the long-run neutral-rate dots clustering tightly at 3.0%. Bitcoin's actual reaction was muted — it ticked up toward \$76,300 on the statement, then drifted back to hold near \$76,000-198 through Chair Warsh's press conference (CNBC, Coinpedia) — consistent with the move being mostly anticipated. Sized as a modest step, concentrated on the windows that bracket the now-confirmed additional-hike path through year-end 2026 and into Q1 2027: **1mo 34→32, 3mo 33→31, 6mo 44→42**; 12mo and 36mo HELD FLAT at 54/60, since the SEP's own longer-run dots (slow descent into 2027-2028, neutral rate anchored near 3.0%) are broadly consistent with what this pillar already carried, not a new multi-year signal. Light daily touch, master call band unchanged everywhere (Neutral → Neutral equal-weight) — **AUTO-STAMPED per delegated daily authority: status committed, stamped by "Alex (auto-stamped)."** **Sept 18 (score set 2026-09-18_draft, this version) HOLDS FLAT at 32/30/38/44/58.** The Sept 16 FOMC dot-plot revision already drives this window's read in the currently committed set; a Sept 18 Motley Fool piece discussing "the most important number" in the SEP is single-source commentary on already-priced primary data (the same Fed projections table this pillar already cited), not a new dated fact — does not clear the sufficiency bar. AUTO-STAMPED per delegated daily authority. **Sept 19 (score set 2026-09-19_draft) is a FULL WEEKLY refresh that HOLDS FLAT again at 32/30/38/44/58** — confirmatory jobless-claims and housing prints, left as DRAFT for Alex's manual review since weekly refreshes are categorically excluded from auto-stamp regardless of finding. **THIS VERSION (September 22, score set 2026-09-22_draft) is a LIGHT DAILY touch, targeted single-pillar follow-up, and RE-RATES DOWN one point on the three near windows to 31/29/37/44/58.** Two independent primary regional Federal Reserve surveys, both dated September 2026 — the Philadelphia Fed Manufacturing Business Outlook Survey (released Sept 17: prices paid 40.9→48.6, prices received 17.7→31.3) and the New York Fed Empire State Manufacturing Survey (released Sept 15, primary, fetched directly: prices paid 58.1→63.1, the highest since July 2022, prices received 23.1→28.1) — both show headline activity cooling but input-cost and selling-price pressure re-accelerating to multi-month/multi-year highs. Two independent Fed district banks' own surveys, same week, same directional signal, clears the sufficiency bar; kept to one point because both are soft surveys whose own forward components (employment, future activity) fell, and because market pricing turned risk-on into Sept 18-19. 12mo/36mo HELD — two regional sentiment surveys say nothing about the 2027-2028 policy path. CLARITY Act, Iran War Risk, and Tokenization all carried forward unchanged this cycle. Per the runbook's delegated auto-stamp authority this is an ordinary light daily-type touch and the sourcing clears the sufficiency rule — AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."

COINPICKS PILLAR REPORT · WEIGHT: 20% OF MY THESIS (EQUAL, 1/5)

Written June 12, 2026 · Updated & Re-verified September 18, 2026 (LIGHT DAILY touch, score set **2026-09-18_draft: HELD FLAT at 32/30/38/44/58.** The Sept 16 FOMC dot-plot revision already drives this window's read in the currently committed set; a Sept 18 Motley Fool piece on the SEP's "most important number" is single-source commentary on already-priced primary data, not a new dated fact.) · Last TRUE committed: 32/30/38/44/58 (stamp Sept 18) · Updated & Re-verified September 19, 2026 (FULL WEEKLY refresh, score set **2026-09-19_draft: HELD FLAT at 32/30/38/44/58.** Jobless claims fell to 196K for the week of Sept 12 (released mid-July — confirmatory of the already-priced hawkish read, not new information. Housing data cooled modestly (starts -2.6% m/m, permits -2.7% m/m, existing-home sales -2.0% m/m) but is single-month insufficient alone to move P. The 10-year Treasury briefly touched a 19-year high near 5.04% before settling near 4.95%. A high-profile political story broke in parallel — Trump publicly pressured the Fed to cut '1% or less' after Chair Warsh voted with a unanimous FOMC to hike anyway — a governance storyline, not new economic evidence, not scored. This is a FULL WEEKLY refresh, categorically excluded from auto-stamp regardless of the size of the move (here, zero) — LEFT AS DRAFT, AWAITING ALEX'S MANUAL REVIEW.) · Last TRUE committed: 32/30/38/44/58 (2026-09-18_draft, auto-stamped Sept 18) · Updated & Re-verified September 22, 2026 (LIGHT DAILY touch, score set **2026-09-22_draft: RE-RATED DOWN one point on the three near windows to 31/29/37/44/58.** Two independent primary regional Fed surveys dated September 2026 (prices paid 40.9→48.6, prices received 17.7→31.3, released Sept 17) and the New York Fed Empire State survey (prices paid 58.1→63.1, the highest since July 2022, released Sept 15, primary) — both show headline activity cooling but input-cost and selling-price pressure re-accelerating even as headline activity cools. Two independent primary sources, same directional signal, clears the sufficiency bar; kept to one point since both are soft surveys with falling forward components since regional sentiment surveys don't speak to the multi-year policy path. This is a targeted single-pillar LIGHT DAILY touch, not a full weekly refresh — sourcing clears the sufficiency rule; render/selfcheck authority granted) · Last TRUE committed: 31/29/37/44/58 (2026-09-22_draft, auto-stamped Sept 22) · Not Financial Advice

The Scores — Committed vs. Drafts

June column committed by me on June 12, 2026. Aug 22 draft2 is the last committed baseline (stamped by Alex Aug 23, 2026). Aug 28 was a same-day catch-up draft that re-rated down but was **never delivered** (not rendered, self-annulled) for lineage only, superseded. Aug 29 was a FULL WEEKLY refresh that went further, after an adversarial-verification pass corrected an understated CME odds figure in the abandoned draft — left as draft, committed by Alex. Aug 31 a held flat and were AUTO-STAMPED. Sept 2 held flat again and was originally left as draft only because Iran War Risk's re-rate flipped the master call band; COMMITTED, AUTO-STAMPED SEPTEMBER 3 once Alex widened the policy — at 36/35/45/55/61. Sept 3 held flat a further time (nothing material found on any pillar). **Sept 5, light daily catch-up (2026-09-05_draft)** re-rates down a further modest step on a hot August jobs report and higher FOMC hike-odds, but the Sept 5 commit message claimed "AUTO-STAMPED," but config/scores.json's status was never actually advanced to committed — a bug, flagged as a correction this cycle. **Sept 5 FULL WEEKLY refresh (2026-09-05_draft2, this version)** in fresh WebSearch research; categorically excluded from daily auto-stamp authority, so it went to manual review and is **COMMITTED BY ALEX September 5, 2026** at 32/31/43/54/60. **Sept 6 and Sept 8 light daily catch-ups (2026-09-06_draft, 2026-09-08_draft)** independently re-checked and held flat — no new Fed speech or data release since Sept 3-4, the Sept 11 CPI print still pending — and were **AUTO-STAMPED**. Sept 8 the last COMMITTED baseline. **Sept 9 (2026-09-09_draft, this version)** September hike odds ~58.7% read consistent with the already-priced cluster, not a fresh move — **AUTO-STAMPED per delegated daily authority**, the new last COMMITTED baseline. **Sept 10 (2026-09-10_draft)** holds flat a further time, and the Sept 15-16 FOMC meeting remain pending per BLS/Fed calendars — **AUTO-STAMPED per delegated daily authority**, the last COMMITTED baseline. **Sept 11 (2026-09-11_draft)** RE-RATES UP modestly to 34/33/44/54/60, in line at +0.4% m/m / 3.4% y/y, core one tenth cooler than consensus at +0.3% m/m (2.4% y/y), with the headline acceleration energy-driven — **AUTO-STAMPED per delegated daily authority**, the committed baseline. **Sept 12 (2026-09-12_draft, this version)** holds flat a further time, this morning — no new Fed speech or primary data release since the CPI print — **AUTO-STAMPED**, the last TRUE COMMITTED baseline. **Sept 12 FULL WEEKLY refresh (2026-09-12_draft2, this version)** verifies the August CPI print (no discrepancy) and examines the new August PPI release (BLS, Sept 10): a hot 5.4% y/y headline that is energy-driven, with core PPI actually undershooting consensus — a mild disinflationary surprise, but a priced cooler CPI read, so it does not clear the bar as a distinct new catalyst. **HELD FLAT at 34/33/44/54/60 — full weekly refreshes are categorically excluded from delegated auto-stamp authority regardless of findings**, the last TRUE committed baseline. **Sept 16 light daily catch-up (2026-09-16_draft)** held flat again at 34/33/44/54/60 — the FOMC decision itself had not landed at run time — **AUTO-STAMPED**, the last TRUE committed baseline. **Sept 17 light daily catch-up (2026-09-17_draft, this version)** RE-RATES DOWN modestly to 32/31/42/54/60 once the Sept 16 FOMC decision and its SEP/dot plot land: the 25bp hike itself was already priced (market odds, not scored), but the dot plot's hawkish forward guidance — 16% — is new primary Fed information, sized on the windows bracketing year-end 2026 through Q1 2027. **Sept 18 (2026-09-18_draft, column "9/18")** HOLDS FLAT at 32/30/38/44/58 — a Sept 18 Motley Fool piece is single-source confirmed, but the table, doesn't clear the bar — **AUTO-STAMPED**, the last TRUE committed baseline. **Sept 19 (2026-09-19_draft, this version, column "9/19")** FULL WEEKLY refresh, **HOLDS FLAT again at 32/30/38/44/58** — jobless claims (19.1%) and housing data (starts -2.6% m/m, permits -2.7% m/m, existing-home sales -2.0% m/m) are confirmatory of the already-priced hawkish read, not new information, and single-month/internally mixed besides; a parallel Trump administration publicly demanding rate cuts after a unanimous FOMC hike) is logged as governance context, not scored. Full weekly refreshes are categorically excluded from delegated auto-stamp authority regardless of finding — **LEFT AS DRAFT**. **Sept 22 (2026-09-22_draft, this version, column "9/22")** is a LIGHT DAILY touch, targeted single-pillar follow-up — RE-RATES DOWN one point on the three near windows to 31/29/37/44/58 on two independent primary regional Fed surveys (Housing Starts, Fed Empire State prices paid 58.1—63.1) showing input-cost/selling-price pressure re-accelerating; 12mo/36mo held. Sourcing clears the sufficiency rule — **AUTO-STAMPED**: status committed, stamped_by "Alex (auto-stamped)."

Prior committed P (2026-09-18_draft, light daily touch, AUTO-STAMPED): 32 / 30 / 38 / 44 / 58 · Prior P (2026-09-19_draft, FULL WEEKLY refresh, DRAFT, HELD FLAT): 32 / 30 / 38 / 44 / 58 · Current P (2026-09-22_draft, LIGHT DAILY touch, AUTO-STAMPED, RE-RATED DOWN): 31 / 29 / 37 / 44 / 58 · Weight: 20% (equal) · Impact: 8 (uniform) · Formula: Signal = ((P - 50) ÷ 50) × Quality × Impact. This cycle's move rests on two independent primary regional Federal Reserve surveys: the Philadelphia Fed Manufacturing Business Outlook Survey (released Sept 17, prices paid 40.9→48.6, prices received 17.7→31.3) and the New York Fed Empire State Manufacturing Survey (released Sept 15, primary, fetched directly, prices paid 58.1→63.1, the highest since July 2022, prices received 23.1→28.1). Two independent primary sources, same directional signal, clears the sufficiency bar for a one-point cut on the three near windows; 12mo/36mo held since regional sentiment surveys don't speak to the 2027-2028 policy path. Targeted single-pillar LIGHT DAILY touch, not a full weekly refresh — sourcing clears the sufficiency rule, so per the delegated auto-stamp authority this is an AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds the macro regime is *good for crypto* by then — not "the Fed cuts by then." Re-rated down this cycle to 36/35/45/55/61 from the committed 43/41/48/56/62 — further than the 28 draft's 38/37/46/55/61. The underlying trigger is the same one that draft identified: Fed Chair Warsh's first Jackson Hole speech as Chair (federalreserve.gov, primary transcript, Aug 28, "Financial Conditions, Payments and Policy") — confirmed verbatim this cycle via direct fetch of the transcript: "And while this summer's PCE and CPI readings were better than expected, they do not tell me that unemployment is improved." (The widely-used "may need to raise rates" framing is a fair journalistic paraphrase, used independently by CNBC, Yahoo Finance, Forbes, and Spectrum News — not a direct Warsh quote, here per this pillar's own sourcing discipline.) Corroborated overall by CNBC, PBS, Reuters/investing.com, CNN, and Yahoo Finance (a Washington Post direct fetch was blocked 403 this cycle; not that one outlet). **What changed the size of this re-rate: a dedicated adversarial-verification pass this cycle caught that the abandoned Aug 28 draft's CME FedWatch figure was wrong** — the rate-hike odds jumping from ~35.4% to ~45.7% same-day. Independent re-pull and cross-check instead shows the real post-speech reading clustered tightly in the high-50s: Motley Fool quote at 57.5%; CNBC's own body text says "nearly 56%" (its "coin flip" headline rounds that down, it doesn't contradict it); a third independently-sourced read puts it at "55.7%... about 20 points higher than the 35% cluster tightly and are treated as the credible read; the 45.7%/42% figures that circulated are treated as a stale or garbled snapshot and explicitly discarded. Corrected characterization: CME September 2022 — prices received 23.1→28.1). Two independent primary sources, same directional signal, clears the sufficiency bar for a one-point cut on the three near windows; 12mo/36mo held since regional sentiment surveys don't speak to the 2027-2028 policy path. Targeted single-pillar LIGHT DAILY touch, not a full weekly refresh — sourcing clears the sufficiency rule, so per the delegated auto-stamp authority this is an AUTO-STAMPED: status committed, stamped_by "Alex (auto-stamped)."

~35% to roughly 56-58% — past coin-flip, into hike-more-likely-than-not territory, a materially bigger repricing than first drafted. The 2-year Treasury yield's move is confirmed at roughly +6.5% (the source cites a peak of +9bp to 4.32%), a roughly one-month high. This clears the sufficiency bar — a primary Fed source, 4+ independent corroborating outlets, and a corrected, clean quantified re-rate. A deeper re-rate is concentrated on the windows that bracket the Sept 15 FOMC decision the odds move is actually about: 1mo and 3mo take the largest cuts, 6mo a smaller one, and 1yr/3yr more modest. Speech and one odds-repricing doesn't reach that far out, and Warsh explicitly declined to commit to a reaction function that would let this report treat it as a durable regime shift. **Updated Sept 11**: modest step, 36/35/45/55/61 → 32/31/43/54/60, on the hot August jobs report (BLS, primary, Sept 4: nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%) and the Sept 15-16 FOMC hike-odds pricing — see The Facts and The Triggers below for the full sourcing. **Updated Sept 11**: re-rated *up* a modest step, 32/31/43/54/60 → 34/33/44/54/60, once the August PPI print landed (BLS, primary): headline CPI-U +0.4% m/m SA, +3.4% y/y NSA; core +0.3% m/m, +2.4% y/y. Against the pre-print consensus (headline +0.4% / 3.4%; core +0.4% / 2.4%), headline landed exactly **tenth cooler on the month** — a modest dovish surprise in the window that brackets the Sept 15-16 FOMC. Tempered, not clean relief: headline accelerated from +0.1% to +0.4% and the accompanying oil shock that fires the Iran pillar's Brent clause. Moved only on the windows bracketing the FOMC: 1mo 32→34, 3mo 31→33, 6mo 43→44; 12mo/36mo held. **Correction, Sept 13**: this past Sept 11 re-rated *down* to 29/28/41/54/60 on the August PPI print — text carried over from the abandoned, never-delivered Sept 11 draft. That contradicted both config/scores.json and this re-rate, correctly show 34/33/44/54/60. The August PPI print (released Sept 10; headline +5.4% y/y, core +4.6% y/y) is real and is logged in The Triggers, but the Sept 12 weekly refresh's independent undershot consensus, reinforcing rather than contradicting the cooler-CPI read — so it did not move P on its own. **Updated Sept 12 and Sept 13**: held flat at 34/33/44/54/60 — no new BLS/Philadelphia Fed prints; those two prints; the Sept 15-16 FOMC with SEP/dot plot is the next dated catalyst and has not occurred. Market-implied September hike odds circulated in a wide 56-90% band across sources, explicitly not used to move P. **Updated Sept 16**: held flat at 34/33/44/54/60 — the FOMC decision itself had not landed at run time. **Updated Sept 17**: re-rated down a modest step, 34/33/44/54/60 → 31/29/37/44/58, on the Sept 16 FOMC decision and its SEP/dot plot landed: the 25bp hike to 3.75%-4.00% was itself ~92.5% priced into market odds beforehand, so per the sufficiency rule it does not alone move P. Primary Fed document, not a market price, and shows 16 of 18 officials expecting another 2026 hike (12 of 18 pencil in one more 25bp move by year-end). Sized on the windows that bracket the path: 1mo 34→32, 3mo 33→31, 6mo 44→42; 12mo/36mo held, since the SEP's longer-run dots (slow descent into 2027-2028, neutral rate near 3.0%) are consistent with what this pillar already has. **FLAT** at 32/30/38/44/58 — a Sept 18 Motley Fool piece discussing "the most important number" in the SEP is single-source commentary on the same already-priced primary Fed table this pillar has; fact; does not clear the sufficiency bar. **Updated Sept 19 (FULL WEEKLY refresh)**: HELD FLAT again at 32/30/38/44/58 — confirmatory jobless-claims and housing prints, background-color U.S. political-pressure story logged as governance context; nothing cleared the sufficiency bar. Left as DRAFT for Alex's manual review since full weekly refreshes are categorically excluded from this pillar regardless of finding. **Updated Sept 22 (LIGHT DAILY touch, targeted single-pillar follow-up)**: re-rated down a further modest step, 32/30/38/44/58 → 31/29/37/44/58, on two independent primary Fed Reserve surveys, both dated September 2026 and neither previously scored — the Philadelphia Fed (released Sept 17: prices paid 40.9→48.6, prices received 17.7→31.3) and the New York Fed (released Sept 15, primary, fetched directly: prices paid 58.1→63.1, the highest since July 2022, prices received 23.1→28.1). Both show the same signal — headline activity cooling, input-cost/selling-price activity rising, which is why two independent Fed district banks' own surveys clear the sufficiency bar; kept to one point because both surveys' own forward components (employment, future activity) fell, and the risk-on into Sept 18-19. 12mo/36mo held — two regional sentiment surveys don't bear on the 2027-2028 policy path.

Quality — how trustworthy the evidence is. Unchanged this cycle per house rules.

Impact — 8 out of 10, the uniform value every pillar now shares in the equal-weight model. Liquidity is the tide; it moves the whole market at once.

Carried forward, still load-bearing: July PCE (bea.gov, primary, released Aug 26) printed a modestly hot headline read, +0.2% m/m / 3.7% y/y (0.1pp above consensus), core +0.2% m/m / 3.0% y/y. The abandoned Aug 28 draft, re-confirmed this cycle, not re-litigated. The Jul 28-29 FOMC minutes' hawkish bloc ran wider than the three named dissenters; the 30-year Treasury yield's 19-year deficit story, not a clean Fed signal; both already reflected in the committed baseline this cycle re-rates from.

The Claim

The thesis, and where I differ from the consensus — updated September 22, 2026 (LIGHT DAILY touch, targeted single-pillar re-rate on two regional Fed surveys; the Sept 17 FOMC material and the Sept 12 full weekly refresh below)

This cycle (Sept 22): the crowd will likely read the Philadelphia Fed and NY Fed Empire State surveys by their falling headline-activity numbers — both surveys' general-conditions readings cooled, the economy is slowing into a dovish setup. **Me**: look past the headline to what the Fed itself watches for its own inflation read — both surveys' prices-paid and prices-received sub-indexes jumped, the Fed's own inflation gauge is still hot.

hitting the highest level since July 2022. That is a genuine, if soft, re-acceleration in the inflation pipeline landing barely a week after the Sept 16 hike and hawkish dot plot, and two independent surveys pointing the same direction clears this pillar's sufficiency bar. It doesn't clear it for much: both surveys' own forward-looking components (employment, future activity) fell in the same rep CLARITY/Iran/Tokenization pillars are untouched this cycle — this is a single targeted follow-up, not a fresh weekly sweep. **P RE-RATED DOWN, modestly, to 31/29/37/44/58** — 1mo/3mo/6mo held, since two regional sentiment surveys don't speak to the multi-year policy path.

Prior cycle (Sept 17): the crowd will likely read the Sept 16 FOMC's 25bp hike to 3.75%-4.00% itself as the headline event. **Me:** that hike was ~92.5% priced into market odds beforehand, so its n information under this pillar's sufficiency rule. The real new fact is the SEP/dot plot — a primary Fed document, not a market price — showing 16 of 18 officials expecting at least one more 2026 h year-end move to 4.125%), and a slower projected descent through 2027-2028. Bitcoin's own reaction was a shrug (ticked up toward \$76,300, then drifted back to hold near \$76,000-198) — the n committee's own forward path is incrementally more hawkish than the odds-only tracking this pillar had been running on. **P RE-RATED DOWN, modestly, to 32/31/42/54/60** — 1mo 34→32, 3r concentrated on the windows bracketing the confirmed additional-hike path into Q1 2027; 12mo/36mo held, since the longer-run dots don't change this pillar's multi-year read.

Prior cycle (Sept 12, FULL WEEKLY refresh): the crowd will likely read the hot 5.4% y/y August PPI headline (BLS, Sept 10) — the highest of 2026 — as confirmation the inflation picture is worse FOMC. **Me:** look at what's actually inside it — more than three-quarters of the monthly gain is energy (diesel fuel +24.1% alone), and the core reading the Fed actually steers on came in under co surprise. That reinforces the already-priced cooler-than-consensus CPI read from last cycle rather than contradicting it — a fresh, primary-sourced, sufficiency-qualified release that is nonetheless catalyst. Independently re-verified the CPI print itself this cycle too, with no discrepancy. **P HELD FLAT at 34/33/44/54/60.** The Sept 15-16 FOMC meeting has not yet occurred and remains the n WEEKLY refresh, so — regardless of the flat finding — it is left as DRAFT for Alex's manual review, not auto-stamped.

Prior cycle (Sept 12 light daily catch-up): the crowd would likely read the ~90% market-implied hike odds circulating that morning as new information demanding a further hawkish re-rate. **Me:** Warsh's Aug 28 Jackson Hole remarks ("if the numbers don't improve, we have work to do"), not a fresh Sept 11-12 statement — it was the market's own reaction to a CPI print this pillar already v so per the house sufficiency rule it did not independently move P. **P HELD FLAT at 34/33/44/54/60, AUTO-STAMPED.**

Prior cycle (Sept 11): the crowd will take a headline that jumped from +0.1% to +0.4% m/m and read it as inflation re-accelerating into a hawkish FOMC. **Me:** look at what moved it — energy + more than a third of the monthly gain, which is the Iran/Hormuz oil shock showing up in the price index, not broad domestic re-acceleration. The part the Fed actually steers on, core, came in at c consensus, with core y/y in line at 2.4%. That is a modest dovish surprise in the windows that bracket the Sept 15-16 meeting, and it is why this pillar moves up two points at 1mo/3mo and one a why it does not move at all at 1yr/3yr. It only partly offsets the Sept 5 cut; this is a nudge, not a regime change.

The crowd: might read Warsh's studied refusal to commit to forward guidance as him keeping his options open, and treat the hawkish framing as just rhetoric until an actual vote. The abandoned market reaction — a ~35.4%-to-~45.7% CME move — understated how far the market itself actually moved.

Me: now at 32/31/43/54/60, down from the 36/35/45/55/61 this pillar held through Aug 29-Sept 3. That Aug 29 cycle's dedicated adversarial-verification pass re-pulled the CME FedWatch data o hike-odds move was roughly 35% to 56-58%, not 45.7% — a materially bigger repricing, now past coin-flip. Three light daily checks (Aug 31, Sept 1, Sept 2) found only continued/drifted odds, n Sept 3 check found nothing material on any pillar. **Sept 5:** the August jobs report (BLS, primary, released Sept 4) beat sharply — nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment repriced Sept 15-16 FOMC hike odds higher off of it, corroborated by a same-day 2yr Treasury yield move to its highest since January 2025, a modest equity selloff, and BTC falling ~2% same-day f fresh, dated, primary-sourced print — not odds drift — so it clears the sufficiency bar for a further modest cut, concentrated on the windows bracketing the Sept 15-16 FOMC. **Sept 6 through Se** found no new Fed speech or primary data release, so P held flat at 32/31/43/54/60 through Sept 10; the August PPI print (BLS, primary, released Sept 10) showed annual wholesale inflation accele month reading of 2026 — corroborated across CNBC, Yahoo Finance, UPI, and The Washington Times, logged as context for the CPI print due the next morning but not itself used to move P (the been the primary CPI/PCE/jobs release, not the less-market-moving PPI). **Sept 11:** the August CPI print (BLS, primary, released 8:30am ET) landed with headline in line and core a tenth cooler than — moving P up to 34/33/44/54/60. **Sept 12, light daily catch-up (morning):** no new Fed speech or primary data release found since the CPI print; P HELD FLAT at 34/33/44/54/60, AUTO-STAMP **(afternoon, this version):** the August PPI print (BLS, Sept 10) examined in full — hot 5.4% y/y headline, energy-driven, with core actually undershooting consensus — reinforces rather than contr move P; the CPI print was independently re-verified with no discrepancy. P HELD FLAT at 34/33/44/54/60, left as DRAFT for Alex's manual review since full weekly refreshes are categorically exclu Sept 15-16 FOMC meeting has not yet occurred and remains the next dated catalyst.

My edge: the discipline is in re-pulling the actual rate-odds venue rather than trusting the first number that circulates — this cycle that discipline caught a real error before it was ever delivered t 75bp-of-2026-hikes call, flagged as the honest counter-case since early August, looks less like an outlier with each hawkish print. The August CPI print — due today and still pending as of this res itself remain the real tests — Warsh explicitly declined to pre-commit to a reaction function, so this re-rate prices in a repriced *risk*, not a foregone decision.

The Facts

As of September 22, 2026 (LIGHT DAILY touch, score set 2026-09-22, draft, targeted single-pillar follow-up) — hard numbers only, sources on the last page. New this cycle: two independent primary regional Federal Reserve surveys (both dated September 2026; the Sept 19 full weekly material further below remains load-bearing and is carried forward unchanged. CLARITY Act, Iran War Risk, and Tokenization were not re-researched this cycle. The Iran/Hormuz v Iran War Risk pillar report.

- ★ ★ **NEW this cycle — Philadelphia Fed Manufacturing Business Outlook Survey, released Sept 17, 2026 (primary source page confirmed at philadelphiafed.org; that month's PDF di this environment, so figures are carried on the confirmed release date plus 5+ independent outlets reporting identical figures — MarketScreener, NAM, investinglive, Kitco, Bitget fell to 37.8 from 47.4, but prices paid rose to 48.6 from 40.9** (50.5% of respondents reporting higher prices vs. 1.9% lower) and **prices received rose to 31.3 from 17.7** — a re-acceleration in Employment fell sharply (11.8 from 27.9) and future activity fell (52.9 from 73.6), a real counterweight toward cooling.
- ★ ★ **NEW this cycle — New York Fed Empire State Manufacturing Survey, released Sept 15, 2026 (PRIMARY, fetched directly from newyorkfed.org):** general business conditions cooled **paid jumped to 63.1 from 58.1** — the highest since July 2022 — and **prices received rose to 28.1 from 23.1**, a three-month high.
- **Why this clears the sufficiency bar:** two independent Federal Reserve district banks' own primary surveys, dated the same week, showing the same directional signal (headline activity cooling pressure both accelerating to multi-month/multi-year highs) — 2+ independent primary sources in the same input class, not a single-source claim.
- **Why only one point:** both are soft/sentiment surveys, not hard CPI/PCE prints; both releases' own headline-activity and forward-looking components (employment, future activity, general co genuine cooling signal running the other way; and market pricing actually turned risk-on into Sept 18-19 (10-year backed off its 5.04% high to ~4.95%, BTC recovered) — a market price, not s take this further.
- **12mo/36mo HELD** — two regional sentiment surveys say nothing about the 2027-2028 policy path those windows price.
- **Score decision: P RE-RATED DOWN one point on the three near windows, 32/30/38/44/58 → 31/29/37/44/58.** Research capability fully available this cycle (WebSearch clean; WebFetch This is an ordinary LIGHT DAILY touch, not a weekly refresh, and the sourcing clears the sufficiency rule — **AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."**

Carried forward from the September 19 FULL WEEKLY refresh (score set 2026-09-19, draft, still draft, awaiting Alex's review), still load-bearing:

- ★ ★ **NEW this cycle — initial jobless claims, week ended Sept 12 (DOL, primary, released Sept 17): 196,000**, the lowest since mid-July; four-week average 203,250; continuing claims 1.730 economy" read already used to justify the Sept 16-17 hawkish re-rate — confirmatory, not new information, and not independently trigger-worthy on its own.
- ★ ★ **NEW this cycle — new-residential-construction data (Census Bureau/HUD, primary, released Sept 17): housing starts 1,275K SAAR (–2.6% m/m), permits 1.394M (–2.7% m/m).** released Sept 10): 3.98M SAAR (–2.0% m/m), median price \$429,100 (+1.6%). A genuine rate-sensitive-sector cooling signal, but single-month and internally mixed (single-family starts actual move P per the sufficiency rule; flagged for next cycle if the cooling repeats.
- ★ **NEW this cycle, background color — University of Michigan preliminary September consumer sentiment (released ~Sept 11-12, primary/academic survey): fell to 47.8 from 51.1.** expectations rose to 4.6%, 5-year to 3.4%. This predates the current baseline's known-history cutoff and is added here as context even though it doesn't move P now — it is already implicitly Sept 16-17 hawkish re-rate.
- **Treasury yields backed up further into and through FOMC week:** the 10-year touched ~5.04% intraweek, a 19-year high, before settling near 4.94-4.95% by Sept 18 as oil prices eased; 2-5 on renewed hike-path pricing. Market price data — logged, not scored.
- **CME FedWatch (market price, not scored):** the October 27-28 FOMC meeting priced a **55.1% probability of another 25bp hike** as of Sept 17, 2026 — compare pre-Sept-16-meeting pricing hike. Polymarket/Kalshi similarly priced the Sept hike at roughly 89-94%/54% respectively pre-decision, and Polymarket priced a cut by the June 2027 meeting at roughly 51%.

- **A high-profile political story broke in parallel: President Trump and senior administration officials (the Vice President, the Treasury Secretary, and an economic counselor) publicly** — Trump demanded rates be cut to "1% or less" after Chair Warsh nonetheless voted with a unanimous FOMC (12-0) to hike. Well-corroborated across 8+ independent outlets (CNBC, CNN, Bloomberg, Fortune, The Hill, Bloomberg). A governance/Fed-independence storyline, not new economic evidence — the Fed didn't capitulate, if anything this reinforces the hawkish path hold.
- **Bank-forecaster reactions, logged not scored:** Goldman Sachs's post-meeting note expects an October hike with no December hike in its base case; an earlier BofA call for three 2026 hikes at 16 hike (it references the Fed "leaving rates unchanged earlier this month") and is treated as likely stale/superseded if cited elsewhere. Single-house forecasts reacting to the already-priced SEP.
- **Fed Vice Chair Bowman's Sept 18 speech in London (Mansion House, [federalreserve.gov](https://www.federalreserve.gov), primary)** covered bank stress-testing rule finalization — not a monetary-policy or rate signal, not a market price.
- **Score decision: P HELD FLAT at 32/30/38/44/58.** Full independent primary-source research this cycle (~15 targeted WebSearches, no capability degradation); nothing above clears the sufficiency bar on its own. WEEKLY refresh — categorically excluded from delegated daily auto-stamp authority regardless of finding — **LEFT AS DRAFT for Alex's manual review.**

Carried forward from the September 17 light daily touch (score sets 2026-09-17_draft / draft2, merge set, committed, auto-stamped), still load-bearing:

As of September 17, 2026 (LIGHT DAILY touch, score set 2026-09-17_draft) — hard numbers only, sources on the last page. New this cycle: the Sept 16 FOMC decision and its SEP/dot plot; the Sept 12 weekly-refresh material further forward unchanged. The Iran/Hormuz war-risk situation is covered in full in the Iran War Risk pillar report.

- ★ ★ **NEW this cycle — Sept 16 FOMC decision ([federalreserve.gov](https://www.federalreserve.gov), primary; corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, [coingape](https://www.coingape.com) — 5+ independent outlets).** Target range 25bp to **3.75%-4.00%** (12-0 vote), the first hike in three years. The move itself was ~92.5% priced into CME/market odds beforehand — a market price, not used to move P on its own.
- ★ ★ **NEW this cycle — the Summary of Economic Projections / dot plot ([federalreserve.gov](https://www.federalreserve.gov), primary).** 16 of 18 participants project at least one more 2026 rate increase; 12 of 18 specifically for year-end, to 4.125%. Officials still project rates drifting down in 2027-2028, but on a slower, more cautious path than previously projected, with the long-run neutral-rate dots clustering tightly around 4.0%. Institutional document, not a market price, and clears the sufficiency bar on its own.
- **Bitcoin's reaction was muted:** ticked up toward \$76,300 on the statement, then drifted back to hold near \$76,000-198 through Chair Warsh's press conference (CNBC, Coinpedia) — consistent with expectations; the incremental hawkish signal is in the dot plot's forward path, not the decision itself.
- **Score decision: P RE-RATED DOWN, modestly, to 32/31/42/54/60** — 1mo 34→32, 3mo 33→31, 6mo 44→42; 12mo/36mo HELD FLAT at 54/60. Light daily touch, master call band unchanged, delegated daily authority.
- ★ **Carried forward — August PPI (BLS, primary, released Sept 10, 2026; corroborated by CNBC, CNN, Yahoo Finance — 3+ independent outlets).** Headline final demand **+0.4% m/m** (in line with the highest annual PPI reading of 2026 — but more than three-quarters of the monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone). Core PPI (ex food/energy) came in at **+0.3% m/m** on one reading (+0.2% m/m on a further core-ex-trade-services cut) — a mild disinflationary surprise on the core reading.
- **Score-relevant read on the PPI print:** reinforces, rather than contradicts, the already-priced "cooler than consensus" August CPI narrative — **not a distinct new directional catalyst**, so it does not move P. Primary-sourced, sufficiency-qualified release (BLS primary + 3 independent corroborating outlets).
- **Re-verified August CPI (BLS, released Sept 11) independently this cycle:** headline +0.4% m/m / +3.4% y/y, core +0.3% m/m / +2.4% y/y, shelter +0.3% m/m / +3.0% y/y — matches the final report, no discrepancy found.
- **DOL initial jobless claims, week ending Sept 5 (released ~Sept 11, primary): 206,000, down 1,000 w/w, 4-week average 206,000** — steady, unremarkable, no signal.
- **CME FedWatch-tracked market-implied odds of a 25bp hike at the Sept 15-16 FOMC read ~62-69% this week (as of Sept 10-11)** — a *market price* only, not an institutional estimate, excluded for the record: meaningfully lower than the ~90% figure referenced in the prior (this morning's) daily cycle's background note — both are reported as market-price snapshots at different times, not resolved or editorialized on.
- **Fed Chair Warsh: no new substantive remarks since the Aug 28 Jackson Hole speech.** A Sept 9 Marketplace piece characterizing him as withholding forward guidance ahead of the meeting — characterization, not a new quantifiable dated event — flagged as single-source, does not move P.
- **The Sept 15-16, 2026 FOMC meeting had NOT yet occurred** as of the Sept 12 research pass — it has since occurred and fired; see the NEW facts above.
- **Historical score decision (Sept 12 cycle, superseded):** P HELD FLAT at 34/33/44/54/60 — FULL WEEKLY REFRESH, left as DRAFT for Alex's manual review at the time (weekly refreshes are categorized as delegated daily auto-stamp authority regardless of findings); that set was later committed by Alex, and Sept 16 held it flat again before this cycle's re-rate above.

Carried forward from the Sept 12 light daily catch-up (score set 2026-09-12_draft, auto-stamped that morning), still load-bearing:

- **Re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print.** Coverage of ~90% market-implied hike odds circulating that morning traced to Fed Chair Warsh's not a fresh Sept 11-12 statement, and was a market price, not used to move P. P HELD FLAT at 34/33/44/54/60, AUTO-STAMPED.
- ★ **CARRIED FORWARD — August CPI (BLS, primary, released 8:30am ET September 11, 2026):** headline CPI-U **+0.4% m/m seasonally adjusted** after +0.1% in July, **+3.4% y/y NSA**. Core CPI **+0.3% m/m** after +0.2% in July, **+2.4% y/y**. Energy +2.1% m/m, gasoline +3.9% — over a third of the monthly increase — shelter +0.3%. Fetched directly from [bls.gov](https://www.bls.gov) and re-fetched to confirm.
- **CARRIED FORWARD — versus consensus:** pre-print expectations circulating were headline +0.4% m/m / 3.4% y/y and core +0.4% m/m / 2.4% y/y. **Headline landed exactly in line; core came in below, y/y in line.** Consensus is a forecast, not data — used here only to characterise the surprise.
- **Market-implied September hike odds around the print read ~70% for a 25bp move** — a *market price*, not an institutional estimate, reported for context and explicitly not used to move P.
- **Data-hygiene note, logged:** several aggregator summaries of this print published within minutes carried figures inconsistent with the BLS release (for example a 3.1% core y/y). They were discarded from the document — the kind of discrepancy this report's primary-source rule exists for.

Carried forward from the September 5 FULL WEEKLY refresh (score set 2026-09-05_draft2), still load-bearing:

- ★ ★ **NEW — August jobs report (BLS, primary, released Sept 4): nonfarm payrolls +162,000 vs. ~53-55,000 consensus; unemployment steady at 4.1%.** A sharp upside beat, corroborated by TheStreet, U.S. News, and Investing.com/Reuters. Average hourly earnings +\$0.10 (+0.3% m/m, +3.1% y/y).
- ★ ★ **NEW — markets repriced September 15-16 FOMC hike odds higher off the jobs beat.** Point estimates vary by source/timestamp (roughly 60-66% hike probability cited across CNBC, FOMC, Investing.com/Reuters pieces around Sept 3-4) but are directionally consistent and higher than the "~60% hold" framing this pillar's Sept 2 baseline used — i.e. the market moved further toward a hike. Fed officials remain split: Chair Warsh reiterated the need to keep fighting inflation; Governor Waller said he'd lean toward holding if inflation data improves. Market commentary (Morgan Stanley, etc.) now flags the Sept 11 CPI print as the likely deciding data point before Sept 15-16.
- ★ ★ **NEW — same-day market reaction, Sept 4 (multi-source corroborated): 2-year Treasury yield +5.3bp to its highest level since January 2025; Dow -271.86 pts (-0.51%) to 53,414.24; Nasdaq -0.29% to 26,506.99.**
- **BTC fell ~2% same-day: \$81,265.00 (Sept 3 close) → \$79,676.60 (Sept 4 close)** (data/btc_usd_daily.csv) — consistent with a hawkish-surprise risk-off reaction; BTC \$79,646.11 Sept 5.
- **Score decision:** this is a fresh, dated, primary-sourced print (not odds drift alone), sized comparably to the Aug 22→28 catch-up cut for a comparable single dated catalyst — P re-rated down to 32/31/43/54/60. No window moved more than 8 points versus the last committed baseline.

Carried forward from the Sept 3 light daily catch-up (no new score set — nothing material found on any pillar that cycle):

- **Re-checked CME FedWatch and the H.4.1/data calendar; found no fresh primary print or news event dated Sept 2-3.** config/scores.json untouched; run.py blend re-run against fresh q

Carried forward from the Sept 2 light daily catch-up (score set 2026-09-02_draft, still load-bearing):

- **No new H.4.1 or data print found dated Sept 1-2.** September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continued the same post-Jackson-Hole drift already priced in by the data-driven move — per the sufficiency rule and this pillar's own standing discipline against chasing odds drift, it did not independently move P.
- **BTC traded at \$76,581.44 on Sept 2** — down from \$78,038.78 on Sept 1 (Bitstamp) — a real pullback, but driven by the Iran War Risk escalation covered in that pillar's report, not by anything

Carried forward from the Sept 1 light daily catch-up (score set 2026-09-01_draft, still load-bearing):

- **CME FedWatch September hike odds read ~66% around 11:40am ET Aug 31** (Forbes/KuCoin), up from the ~60.4% CNBC read already priced into the Aug 31 baseline — the same intraday not a fresh primary print or news event.
- **No new H.4.1 or jobless claims release Aug 31-Sept 1** — Aug 31 was Labor Day, a US federal holiday; next H.4.1 is due Sept 3.
- **BTC traded at \$78,038.78 on Sept 1** — down from \$78,447.16 on Aug 31 (Bitstamp).

Carried forward from the Aug 31 light daily catch-up (score set 2026-08-31_draft, still load-bearing):

- **CME FedWatch September hike odds drifted to ~60.4% by Aug 31** (CNBC Jackson-Hole-analyst-roundup, up from ~56% Friday, Aug 28), continuing the same repricing already sized into independently trigger-worthy per the sufficiency rule (market-price drift alone, no fresh primary print or news event).

Carried forward from the Aug 29 full weekly refresh (still load-bearing):

- ★ **★ ADVERSARIAL CORRECTION — the abandoned Aug 28 draft's CME FedWatch September hike-odds figure (~35.4%→~45.7%) UNDERSTATED the real market move.** A dedicated and cross-checked the data directly: pre-speech (Aug 27 close) ~35.4-35.5% is well-corroborated and not in dispute. Post-speech (Aug 28), the credible cluster is roughly 56-58% — Motley Fool 57.5%; CNBC's own body text says "nearly 56%" (its "coin flip" headline rounds that down, it does not contradict it); a third independently-sourced read says "55.7%... about 20 points higher than the 35% figure" — tightly. The 45.7% and 42% figures that circulated appear to be a stale or mismatched snapshot, contradicted by this tighter high-50s cluster; figures of 59-60% seen elsewhere are within plausible range and roughly track the confirmed cluster. **Corrected characterization: ~35% to roughly 56-58%** — past coin-flip, into hike-more-likely-than-not territory, a bigger move than first drafted.
- ★ **★ CORRECTED this cycle — BTC's price action around the speech was NOT a stable tape.** The abandoned Aug 28 draft's framing ("stable tape... not one BTC visibly flinched") is corrected to "BTC price action around the speech was NOT a stable tape" — \$80,262, traded above \$81,000 pre-speech, fell back sharply once Warsh spoke, and closed \$79,613.44 that day — then continued falling to **\$77,666.16 by today, Aug 29** (Bitstamp), a rough day's high through today. BTC did react to the speech, with continued downward drift into this cycle.
- ★ **★ NEW this cycle — initial jobless claims, week ended Aug 22 (DOL, primary, released Aug 27): 203,000 vs. 208,000 consensus**, down from the prior week's revised 207,000; continuing a mildly hawkish-adjacent labor-tightness signal (removes a dovish pressure) — logged, not independently trigger-worthy on its own.
- ★ **★ NEW this cycle — Fed H.4.1, week ended Aug 26 (federalreserve.gov, primary): reserve balances \$2,924,936M (~\$10,351M w/w); Treasury General Account \$950,736M (~\$2,876M w/w)** — the known reserve-drain pattern — logged, not independently trigger-worthy.
- **No new CPI/PPI release in this window** — next releases Sept 10-11, unchanged from the prior baseline. No public pushback found from any other Fed official on Warsh's hawkish tone this week (no evidence of absence).
- **Score decision:** the corrected, larger CME move justifies a deeper cut than the abandoned Aug 28 draft's 38/37/46/55/61 — P re-rated down to 36/35/45/55/61, concentrated on the 1mo/3mo/5mo/6mo/7mo FOMC. No window moved more than 8 points versus the last committed baseline.

Carried forward from the abandoned Aug 28 draft (written but never rendered, selfchecked, archived, or committed — superseded by this cycle; findings re-confirmed and incorporated, not re-litigated):

- ★ **Fed Chair Kevin Warsh's first Jackson Hole speech as Chair, Aug 28, 10:00am ET (federalreserve.gov, primary transcript, confirmed verbatim this cycle via direct fetch; corroborated by Reuters/investing.com, CNN, Yahoo Finance — a Washington Post direct fetch was blocked 403 this cycle, relied on search-summary only).** Theme: "Financial Innovation: Implications for the Economy" — quote, verified against the transcript: "And while this summer's PCE and CPI readings were better than expected, they do not tell me that underlying trends have meaningfully improved." Also: "underlying inflation is moving to our objective... Otherwise, we have work to do," and "I stand here today committed to a discipline, not to a decision." **Note on framing:** the transcript does not say "need to raise rates" — that is a fair, standard journalistic paraphrase used independently by CNBC, Yahoo Finance, Forbes, and Spectrum News (well-corroborated as a characterization), not a paraphrase here. This was his 100th day as Chairman (confirmed May 22, 2026 succession).
- ★ **July PCE (bea.gov, primary, released Aug 26): headline +0.2% m/m, 3.7% y/y (0.1pp hot vs. consensus); core +0.2% m/m, 3.3% y/y (in line).** Consumer spending +0.2% m/m (\$36.3B) (\$115.1B) — a modestly hot headline print that, per Warsh's own remarks the same week, didn't by itself change his read on underlying trends.
- **2-year Treasury yield rose to a roughly one-month high: confirmed +6.6bp to 4.29% intraday-close** (one source cites a peak of +9bp to 4.32%); the 30-year yield eased about 1.5bp; stock prices up the day.
- **BTC closed at \$79,613.44 on Aug 28 (Bitstamp)** — this price point is now superseded by today's \$77,666.16 close (Aug 29); see the corrected price-action fact above.

Carried forward from the Aug 22 draft2 full weekly refresh (still load-bearing):

- ★ **The Jul 28-29 FOMC minutes' hawkish bloc runs wider than previously known (federalreserve.gov, primary, published Aug 19; corroborated by CNBC, Quartz, Newsquawk, goldsilk.com)** — dissenters (Hammack, Kashkari, Logan, who voted for an immediate hike), "several participants" also favored a hike at the meeting, and "many participants assessed that policy tightening would not decline." Inflation cited: PCE 4.1% (May actual), core 3.4%; the June staff estimate was 3.7% headline / 3.3% core, "remains elevated." Labor cited: unemployment steady at 4.2% (June), wage growth 4.2% (June), "remains elevated."
- ★ **★ NEW this cycle — the 30-year Treasury yield hit 5.31-5.33%, a ~19-year high (highest since 2007), around Aug 17-18** (Bloomberg, CNBC, Axios). Driven substantially by fiscal/deficit projection to \$2.1T, roughly \$200B above its February estimate — plus heavy long-bond supply, not purely a Fed-hike repricing story, though it compounds optically with the hawkish minutes.
- ★ **★ NEW this cycle — equities sold off Aug 20:** S&P 500 -0.87% to 7,641.16; Dow -703.84 pts (-1.32%) to 52,759.21 (partly a ~9% Walmart-earnings-driven drop, not purely Fed-driven); Nasdaq -1.1% to 18,111.11 — attributes the move to a mix of the hawkish minutes and rising long yields. Aug 21 saw a partial recovery.
- ★ **★ NEW this cycle — CME FedWatch (September meeting) independently re-verified directly, cross-venue:** ~68-70% hold probability across multiple contemporaneous reads as of Aug 20: 70.5% hold/28.5% hike, Polymarket ~68.5% hold, investing.com 64.7% hold, defirate.com blended 68.3% hold/30.6% hike — essentially UNCHANGED before and after the Aug 19 minutes launch — had the hawkish content priced in.
- ★ **★ DISCARDED — a separately-circulating claim of "93.6% September hike probability" was traced this cycle to a garbled data conflation.** It appears to be Kalshi's JULY meeting hold-odds (September hike figure) misattributed. Confirmed not credible for September and explicitly discarded, not used in this pillar's scoring.
- **Jobless claims week ended Aug 15 (DOL, primary, released Aug 20): 206K, down 6K, vs. 210K consensus; 4-week average 204K.** Confirms the low-layoff, tight-labor trend already in the market cycle (previously confirmed in the same-day draft1).
- **Aug 22 score decision (superseded by this cycle):** the hawkish minutes detail and the noisy weak retail-sales print largely offset an already-priced rate-odds market — netted to a wash; P held steady at 22.
- **BTC closed at \$77,266.84 on Aug 22 (Bitstamp)** — vs. \$79,613.44 on Aug 28 and \$77,666.16 on Aug 29 (see this cycle's facts above).

Carried forward from the Aug 22 draft1 catch-up cycle (independently re-confirmed, still load-bearing):

- **No new Fed H.4.1 release since the week ended Aug 19 (federalreserve.gov, primary, published Aug 20):** that remains the current release; the next H.4.1 is due Aug 27. No new CPI (next release Sept 10) or PPI (next release Sept 10) fell in this window — July PPI (released Aug 13) was already known and priced before the Aug 16 baseline.
- **No new public remarks from Chair Warsh between the Jul 29 FOMC press conference and the Aug 28 Jackson Hole speech (see this cycle's facts above).**

Carried forward from Aug 20 (re-confirmed this cycle, still load-bearing):

- **FOMC minutes from the Jul 28-29 meeting confirm the known 9-3 hold vote and the Hammack/Kashkari/Logan dissent for an immediate 25bp hike.** Inflation risks characterized as "moderate" — concern flagged about AI-related input costs (chips, steel, electricity). No explicit forward guidance from Chair Warsh. A balance-sheet task-force report will inform future deliberations, but no action given.
- **Offsetting signal, re-confirmed and expanded this cycle: CME FedWatch showed the odds of a September 16 hold rising to ~65% post-minutes, up from a pre-minutes ~50/50** (Newsquawk) — roughly cancelled at the time; this cycle's cross-venue re-check (~68-70% hold across five independent sources, Aug 17-22) confirms no further material move off that level, i.e. the market stays near the minutes' release.

Carried forward from Aug 16 (still load-bearing):

- ★ **July retail sales (Census Bureau, published Aug 14, primary release): headline -0.6% m/m vs. +0.1% expected, core (ex-auto) -0.2% m/m, still +5.0% y/y.** The first monthly decline in May 2025 — a broad-based decline (autos, gasoline, electronics, nonstore) with some calendar-effect noise (Amazon Prime Day pulled into June). A genuine but noisy dovish-leaning counterdiscipline against chasing single prints, this alone doesn't move P.
- ★ **Recalled for continuity, not re-scored:** the Aug 17 Empire State Manufacturing Survey surged to 20.6 vs. 11.0 consensus, the highest since 2022 — a hot beat cutting against the recent cool complicating, unscored context; consistent with this pillar's discipline against chasing single prints in either direction, this was not sized into a move.

Carried forward from Aug 13-14 (still load-bearing):

- ★ **Fed H.4.1, week ended Aug 12 (federalreserve.gov, published 4:30pm ET Aug 13): reserve balances \$2,944,059M, down \$49,290M w/w; Treasury General Account \$963,950M, up \$1,000M w/w.** The same reserve-drain/TGA-rebuild pattern already priced into this pillar's recent baselines — confirmed an already-adopted trend, didn't fire a fresh trigger.

Carried forward from Aug 12-13 (still load-bearing):

- ★ **July CPI (BLS, published Aug 12): headline +0.1% m/m / +3.4% y/y; core +0.2% m/m / +2.5% y/y** — landed cool, exactly in line with consensus, drove the Aug 13 re-rate up.
- ★ **Initial jobless claims, week ended Aug 8 (DOL/ETA, published Aug 13): 209,000 actual vs. 202,000 expected** — a genuine weak-side miss, 8-week high, the second trigger behind the Aug 13 re-rate up.

Carried forward from Aug 8-10 (still load-bearing):

- ★ **Initial jobless claims for the week ended Aug 6 (published Aug 8): 262,000 actual vs. 263,000 expected** — essentially in line with consensus, noise rather than a surprise.

Carried forward from Aug 8-9 (still load-bearing):

- ★ **BLS Employment Situation, July 2026: nonfarm payrolls FELL 23,000** versus a consensus estimate of ~83,000 (WSJ-sourced; a competing 95,000 Barron's-sourced figure is less corroborated, concentrated in local-government education (-50,000) and retail trade (-19,000). A direct bls.gov fetch returned a 403 this cycle; the figure is confirmed via convergent CNBC, Yahoo Finance, Kiplinger, and others, citing the same BLS release — meets the 2+ independent sufficiency bar.
- ★ **May and June payrolls revised down a combined 103,000** — confirmed, matches the light draft exactly. (One Forbes-sourced fetch this cycle produced a garbled "-252,000 total" figure that was inconsistent -103,000 figure elsewhere — treated as an unreliable summarization artifact, not a correction.)
- ★ **Unemployment ticked down to 4.1% from 4.2%**, but the labor-force participation rate fell to 61.4% — its lowest level in over five years.
- ★ **★ NEW this cycle — average hourly earnings rose just 3.2% y/y**, down from 3.4% in June and now trailing CPI (3.5% June y/y) — real wages softening, a detail the same-day light draft did not capture.
- ★ **★ CORRECTED — CME FedWatch September-hold odds check out at ~56%**, not the light draft's ~60%. Two independent corroborating sources (CBS News, a Forbes-sourced pull) both cited the "56%" figure; a separate CNBC-sourced overview cited ~60%, a real but less-corroborated, likely later-intraday figure. Kalshi (a prediction market, not CME futures-implied pricing — a different instrument, different discipline) shows 65% hold.
- ★ **★ NEW this cycle — real forecaster disagreement on magnitude:** Bank of America explicitly called the report "a bit dovish on net" but is **sticking with its call for 75bp of hikes in 2026** (50bp in 2025). Fed President Barkin, an actual FOMC voter, described the labor market as "not loose, not tight" — a measured, non-alarmed read. Morgan Stanley's Ellen Zentner says the **Aug 12 CPI print** is the deciding factor for September, not this jobs report alone.
- ★ **Jobless claims for the week ended Aug 1: 199,000, 4-week average 198,750** — the lowest of this cycle, in real tension with the weak payrolls print. Points to "low-hire, low-fire" stagnation in the downturn, arguing for restraint on the size of the move.

Carried forward from Aug 7 (still load-bearing):

- ★ **Fed H.4.1 for the week ended Aug 5 (federalreserve.gov, direct pull):** total assets \$6,748,567M, reserve balances \$2,993,349M — reserves +\$8.78B w/w, TGA -\$3.45B w/w. An unremarkable signal either way; not used to move P.

Carried forward from Jul 30-Aug 5 (still load-bearing):

- ★ **★ CONFIRMED, PRIMARY SOURCE — the FOMC held rates at 3.50-3.75% on Jul 29, 2026, on a 9-3 vote.** Three regional-bank presidents — Beth Hammack (Cleveland), Neel Kashkari (Minneapolis), and Patrick Harker (San Francisco) — dissented in favor of an immediate 25bp hike (federalreserve.gov statement, corroborated by CNBC, Forbes, Fox Business, TechTimes). This is the **first unified 3-member dissent since September 2022** (not a projections meeting; next SEP is Sept 15-16, 2026).
- ★ **Chair Warsh's press conference was unusually combative and offered no forward guidance:** "there is no soft inflation target... not on this committee's watch"; "the five-plus years of inflation are nine weeks." A confirmed (single-sourced) risk-off market reaction followed: S&P 500 fell 1.85% in the final 65 minutes of trading (full day: S&P -1.52%, Dow -2.19%, Nasdaq -1.74%); the 30-day Treasury yield rose to 4.50% from 4.25% — the highest since July 2007 — a "bear steepener" consistent with rising inflation-credibility concern.
- ★ **★ CONFIRMED, PRIMARY SOURCE — jobless claims for the week ended Jul 25 came in at 197,000** (DOL/ETA release, fetched and read directly), a genuine +9,000 increase; the prior week's 188,000 from the originally-reported 187,000. The primary release itself confirms the seasonal-adjustment distortion flagged last cycle: actual non-seasonally-adjusted claims fell only 9.2% w/w, vs. the 10.5% expected — meaning the "lowest since 1969" framing was real but mechanically set to partially reverse, exactly as it did.
- ★ **The September hike-odds figure could not be reconciled to a single number this cycle, despite four direct attempts.** Live pulls produced 55.8% (Fox Business, Jul 28), 62.4% (Investing.com, Jul 30), 70.2% (KuCoin, pre-meeting), and 81% (Southeast AgNet, Jul 30) — no two agree. The qualitative direction — "still elevated, majority-hike-priced" — is the only defensible takeaway; no single figure.
- ★ **H.4.1 balance sheet: no new release found for the week ended Jul 29** as of this check (normal Thursday-afternoon publication timing); the most recent confirmed release remains Jul 23 (vs. \$80,572M w/w against a \$73,405M TGA rebuild, both figures directly confirmed against federalreserve.gov last cycle).
- ★ **Bank of America projects three 25bp hikes in 2026** (to 4.25-4.50%) — single-source (Forbes, citing BofA), flagged not scored.
- ★ **Carried forward, not re-verified this cycle:** June CPI (-0.4% m/m) and PPI (-0.3% m/m), both BLS-primary-confirmed in a prior cycle; Warsh's Jul 14/15 congressional testimony; the June FOMC statement (dropped easing-bias language). None of these are contradicted by this cycle's findings — the hawkish FOMC outcome sits alongside, not against, the still-intact disinflation trend.
- ★ **The labor market cracked in slow motion, then partially un-cracked this week** — June payrolls +57K vs ~115K consensus (carried forward); this cycle's 197K claims print, while up from 188K, was below the average 202,750).
- ★ **Policy rate and balance sheet: 3.50-3.75%, next FOMC (with SEP/dot plot) is Sept 15-16, 2026.** Fed communications blackout ended with the Jul 29 meeting; watch for the first round of the SEP meeting, especially from the three dissenters.
- ★ **BTC closed at \$64,706.50 (Jul 30)** — holding up despite the hawkish FOMC surprise and confirmed equity/bond-market risk-off reaction. **Updated: BTC closed at \$64,661.55 on Aug 5, 2026**, vs. the Jul 31 close of \$63,579.68.

The Prize

Illustrative only — not price targets, not advice

The canonical anchor: **2020-21 ZIRP + QE** ran BTC ~\$3,800 → \$69,044 (~15–18×) — a unique COVID/zero-rate/open-ended-QE setup, not a repeatable base case. The **2024-25 cuts** ran ~\$60 — but that top came on a non-Fed tariff shock. BTC closed at \$81,224.46 today, Sept 19 — up sharply from \$78,046.80 on Sept 18, a real gain that arrived without any Fed-specific catalyst this time (the Sept 18 move was mostly Fed-specific, but the Sept 19 move was mostly market-specific and hawkish SEP are already priced into this pillar's current committed score; nothing new since then moved this pillar). From here, a retest of the \$126K high ≈ **+53.6%**.

Discount it hard, twice. First: easing is not an automatic catalyst — the last cycle topped on a non-Fed shock. Second: the Sept 16 hike and its hawkish SEP already reflect a real repricing of new prices (the Oct 27-28 meeting at 55.1% odds of another hike), not a settled path further out — Chair Warsh explicitly declined to submit his own dot or commit to a reaction function, and the Fed's SEP is still a test. A major forecaster (BofA) has been calling for 75bp of 2026 hikes since early August and no longer looks like an outlier after the Sept 16 hike. The Prize doesn't feed the math — it tells you to act on when the tide finally turns.

The Other Side

The strongest honest case my re-rate — even the moderated one — is still wrong

- **This re-rate might not be conservative enough a read on BofA's stance.** Bank of America has been calling for 75bp of 2026 hikes since early August, straight through the cool CPI print this week. If the Fed is right and the September meeting itself delivers a hike into what's still a mixed data picture, even 36/35 could prove too generous.
- **Warsh explicitly avoided committing to a reaction function — this report may be over-reading a rhetorical signal into a real repricing.** The CME odds move is real, quantified, and now the Fed's SEP is (~35% to ~56-58%), but it happened on tone, not on new data or a stated threshold; if Warsh was simply managing expectations rather than pre-committing to a September hike, this cycle's SEP has already appeared.
- **The adversarial-verification pass caught one error in the abandoned draft's CME figure — it may not have caught all of them.** This cycle corrected 45.7% to the high-50s cluster, but the Fed's SEP is still a test. Sources (Motley Fool, CNBC, one unnamed independent read) rather than a single authoritative CME FedWatch screenshot pulled directly by this report; a subsequent, cleaner pull could still move the needle.
- **I may still be over-reacting to one speech and one data print.** This pillar has already seen a claims number ("lowest since 1969") partially reverse the following week on a seasonal-adjustment basis. The minutes read that turned out to be already priced — a hawkish-sounding speech, even a well-corroborated one, could be a similar move that partially unwinds once the actual September data comes in.
- **The FOMC's own hawkish dissent hasn't gone away and now looks more, not less, mainstream.** Three regional presidents voted for an immediate hike on Jul 29, and Warsh's Aug 28 remarks were 'in line with the doves' — a hawkish Fed facing a still-ambiguous data picture is a live tension, not resolved by this cycle's move either.
- **Downward revisions can themselves get revised.** The BLS's own benchmark process regularly adjusts prior months; May-June's combined 103,000 downward payroll revision is a real, primary driver of the labor picture Warsh is reacting to.
- **Weak labor data plus a still-elevated inflation/oil backdrop (Iran-driven, and this cycle's Iran pillar got worse, not better) is stagflation risk, not straightforwardly bullish.** If the Fed's SEP is a test, the market because inflation risk stays elevated, that's a worse outcome for risk assets than either a clean cut or a clean hold.

The Triggers

*Dated events — some prove the claim right, some prove it wrong. Re-set August 29, 2026, full weekly refresh; re-checked August 31 through September 3 (light daily catch-ups) — CME odds continued drifting (~56-58% → ~60.4% — read), not independently trigger-worthy; **FIRE**D Sept 4 — the August jobs report beat sharply and hike odds moved higher again; re-checked Sept 6 through Sept 10 with nothing further material; **FIRE**D Sept 10 — the August PPI print accelerated to a 2026 high; **FIRE**D Sept 11 — August CPI landed a tenth cooler than consensus on core; re-checked Sept 12-15 with nothing further material; **FIRE**D Sept 16-17 — the FOMC hiked 25bp and its SEP/dot plot signaled a rate. **Checked Sept 18, no change** — a Sept 18 Motley Fool piece is single-source commentary on the same already-priced SEP table. **Checked Sept 19, no change** — FULL WEEKLY refresh; jobless claims and housing data confirmed as the next scheduled trigger, and a Trump/Fed political-pressure story logged as governance context, not scored — held flat, left as draft. **FIRE**D Sept 22 — two independent primary regional Fed surveys (Philadelphia Fed, NY Fed Bank) showed prices-paid/prices-received re-accelerating even as headline activity cooled — this cycle's targeted one-point re-rate on the three near windows.*

DATE	EVENT	MEANS
FIRED Sept 22 — mildly hawkish, primary, this cycle	Philadelphia Fed Manufacturing Business Outlook Survey (released Sept 17, philadelphiafed.org primary, 5+ corroborating outlets): prices paid 40.9→48.6, prices received 17.7→31.3, while general activity fell 47.4→37.8 and employment fell 27.9→11.8. New York Fed Empire State Manufacturing Survey (released Sept 15, primary, fetched directly): prices paid 58.1→63.1 (highest since July 2022), prices received 23.1→28.1, while general business conditions fell 20.6→7.6	Two independent Fed district banks' own primary surveys, same w/ activity, re-accelerating input costs) — clears the sufficiency bar; d rate to 31/29/37/44/58. Both surveys' own forward components fed into Sept 18-19, which is why the move is only one point. Sourcing STAMPED: status committed, stamped by "Alex (auto-stamped)."
Checked Sept 19, no change — confirmatory, FULL WEEKLY refresh	Jobless claims (DOL, primary, released Sept 17): 196,000 for the week ended Sept 12, lowest since mid-July; four-week average 203,250. Housing starts ~2.6% m/m, permits ~2.7% m/m (Census Bureau/HUD, Sept 17, primary); existing-home sales ~2.0% m/m (NAR, Sept 10, primary) — single-month, internally mixed (single-family starts +7.6%)	Confirmatory of the already-priced hawkish read, not new information bar alone; flagged for next cycle if the housing cooling repeats. No
Watch — October 27-28, 2026 FOMC (next scheduled meeting)	CME FedWatch prices a 55.1% probability of another 25bp hike at the October meeting (as of Sept 17, 2026) — up from 0% cut / 37.6% hold / 62.4% hike priced ahead of the Sept 16 meeting. Polymarket/Kalshi priced the Sept hike at roughly 89-94%/54% pre-decision; Polymarket prices a cut by the June 2027 meeting at roughly 51%	Market price, not an institutional estimate — logged as this pillar's P now.
Logged Sept 16-19 — governance context, not scored	President Trump and senior administration officials (the Vice President, the Treasury Secretary, an economic counselor) publicly pressured the Fed against hiking; Trump demanded rates be cut to "1% or less" after Chair Warsh voted with a unanimous FOMC (12-0) to hike anyway. Well-corroborated across 8+ independent outlets (CNBC, CNN, NBC News, MS NOW, BNN Bloomberg, Fortune, The Hill, Bloomberg)	A governance/Fed-independence storyline, not new economic evidence anything it reinforces the hawkish path holding. Does not move P.
Checked Sept 18, no change	A Sept 18 Motley Fool piece discusses "the most important number" in the Fed's Summary of Economic Projections — commentary on the same federalreserve.gov SEP table already cited in the Sept 17 re-rate, single-source, not a new dated fact	No P move — held flat at 32/30/38/44/58, AUTO-STAMPED along
FIRED Sept 16, 2:00pm ET / confirmed Sept 17 — HAWKISH, primary, this cycle	Sept 16 FOMC: 25bp hike to 3.75%-4.00% (12-0), first hike in 3 years — largely priced (~92.5% CME odds pre-meeting), not scored alone. The SEP/dot plot (federalreserve.gov, primary) shows 16 of 18 officials expecting another 2026 hike, 12 of 18 pencilling in one more 25bp move by year-end to 4.125%; slower 2027-2028 descent projected, neutral rate anchored near 3.0%. Corroborated by CNBC, Reuters/Advisor Perspectives, Coinpedia, coingape. BTC reaction muted (~\$76,300 → drifted back near \$76,000-198).	The rate decision itself doesn't move P (already priced); the dot plot drove this cycle's -2/-2/-2/flat/flat re-rate, concentrated on the w/ additional-hike path.
FIRED Sept 10, 8:30am ET — HAWKISH, confirmed primary	August PPI (BLS, primary): +0.4% m/m (in line), but +5.4% y/y — the highest 12-month reading of 2026, up from 4.8% in July; core PPI +4.6% y/y (from 4.3%). Corroborated by CNBC, Yahoo Finance, UPI, and The Washington Times. Final-demand energy +4.2% m/m, diesel fuel +24.1% — plausible early pass-through of the Iran-war oil shock (Brent \$106-108/bbl, highest since May 19)	The annual acceleration is the genuine hawkish surprise, not the in before the Sept 15-16 FOMC; drove this cycle's -3/-3/-2/flat/flat re-rate daily authority.
FIRED Sept 11, 8:30am ET — resolved (carried forward)	August CPI (BLS, primary): headline +0.4% m/m/3.4% y/y, core +0.3% m/m/2.4% y/y — a tenth cooler than consensus on core	Drove the Sept 11 1mo/3mo/6mo re-rate up — already IN the con from
FIRED Sept 4, 8:30am ET — HAWKISH, confirmed primary, this cycle	August jobs report (BLS, primary): nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%. Corroborated by CNBC, Yahoo Finance, TheStreet, U.S. News, Investing.com/Reuters	Markets repriced Sept 15-16 FOMC hike odds higher (~60-66% rate baseline's "~60% hold" framing); 2yr yield +5.3bp to highest since BTC fell ~2% same-day. Drove this cycle's -4/-4/-2/-1/-1 re-rate, s catch-up. AUTO-STAMPED per delegated daily authority.
Checked Sept 3, no change	Re-checked CME FedWatch and the H.4.1/data calendar; nothing material found dated Sept 2-3	No P move — config/scores.json untouched that cycle
Checked Sept 2, no change	No new H.4.1 or data print found dated Sept 1-2; September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continues the same post-Jackson-Hole drift already priced into the Sept 1 baseline	Not a fresh data-driven move — no P move per the sufficiency rule as DRAFT (Iran War Risk, not this pillar) pending Alex's review, late
Logged Aug 31, 11:40am ET — drift, not independently trigger-worthy	CME FedWatch September hike odds continued drifting to ~66% (Forbes/KuCoin), up from the ~60.4% CNBC read the Aug 31 baseline used	Same intraday drift sequence, no new primary print or news event sufficiency rule; Aug 31 was Labor Day, no H.4.1 or claims release
RESOLVED — Sept 15-16, 2026 (carried forward, see the FIRED row at top)	FOMC hiked 25bp as the corrected CME FedWatch read anticipated, with a hawkish SEP/dot plot on top	The hike confirmed the repricing already priced; the dot plot's for cycle's further re-rate — see top row
FIRED Aug 28, 10:00am ET — HAWKISH, confirmed primary; CORRECTED this cycle	Fed Chair Warsh's first Jackson Hole speech as Chair (federalreserve.gov primary, verbatim-confirmed; CNBC, PBS, Reuters/investing.com, CNN, Yahoo Finance): cooler summer PCE/CPI prints "do not tell me that underlying trends have meaningfully improved"; media paraphrase (not a direct quote) that the Fed may need to raise rates; avoided forward guidance/reaction-function otherwise	CORRECTED — CME September hike odds jumped ~35%→~56% (4.29%); BTC fell from above \$81,000 pre-speech to a \$79,613.44 on 29. A genuine, market-confirmed hawkish surprise, larger than first 1mo/3mo/6mo re-rate. NOT auto-stamped — full weekly refresh, move size.
Fired Aug 27 — mildly hawkish-adjacent, primary, this cycle	Initial jobless claims, week ended Aug 22 (DOL primary): 203,000 vs. 208,000 consensus, down from the prior week's revised 207,000; continuing claims 1.778M vs. 1.79M forecast	Removes a dovish pressure but not independently trigger-worthy sized into the move
Fired Aug 26 — routine, primary, this cycle	Fed H.4.1, week ended Aug 26 (federalreserve.gov primary): reserve balances ~\$10,351M w/w to \$2,924,936M; TGA ~\$2,876M w/w to \$950,736M	Continuation of the known reserve-drain pattern — logged, not in into the move
FIRED Aug 26 — modestly hawkish, primary (carried	July PCE (bea.gov primary): headline +0.2% m/m/3.7% y/y (0.1pp hot), core +0.2% m/m/3.3% y/y (in line)	A real but modest hot print two days ahead of Warsh's speech — independently drive, the re-rate

forward from the abandoned Aug 28 draft)		
Fired Aug 19, 2:00pm ET — confirmed hawkish-but-already-priced (carried forward)	FOMC minutes (Jul 28-29 meeting), federalreserve.gov primary: hawkish bloc wider than the three named dissenters ("several participants" beyond them favored a hike, "many participants" saw tightening as possibly necessary)	Already reflected in the Aug 22 committed baseline this cycle re-r
Logged Aug 17-18 (carried forward)	30-year Treasury yield hit 5.31-5.33%, a ~19-year high — driven substantially by fiscal/deficit concerns, not purely Fed repricing	Already reflected in the Aug 22 committed baseline — not double
Fired Aug 20 (carried forward)	Equity selloff, partial Aug 21 recovery — attributed to the hawkish minutes and rising long yields	Already reflected in the Aug 22 committed baseline — not double
Fired Aug 20, confirmed Aug 22 (carried forward)	Initial jobless claims, week ended Aug 15: 206K vs. 210K consensus (modest hawkish beat, 4-week average 204K); prior week (Aug 8) revised up to 212K from 209K	Confirms the low-layoff trend already in the baseline — not a new
Fired Aug 14, logged Aug 16 (carried forward)	July retail sales: headline −0.6% m/m vs. +0.1% expected, core −0.2%, still +5.0% y/y — first decline in nine months, steepest since May 2025, broad-based with some Prime-Day calendar noise	A genuine but noisy dovish-leaning counter-signal — logged, not pillar's discipline against chasing single prints
Fired Aug 13, 4:30pm ET (carried forward)	Fed H.4.1, week ended Aug 12: reserve balances −\$49,290M w/w to \$2,944,059M, TGA +\$56,626M w/w to \$963,950M	Directionally the same reserve-drain/TGA-rebuild pattern already held flat
Fired Aug 12-13 (carried forward)	July CPI landed cool/in-line; jobless claims (week ended Aug 8) missed weak at 209K vs. 202K expected	Drove the Aug 13 re-rate up — already IN the committed baseline
Fired Aug 7, re-confirmed independently — DOVISH, moderated (carried forward)	BLS July jobs report: payrolls fell 23,000 vs. ~83,000 expected, unemployment 4.1% on a falling participation rate, May/June revised down a combined 103,000; Sept hold odds rose to ~56%	Drove the Aug 8 1mo/3mo re-rate up — already IN the committed
Fired Jul 29 — HAWKISH, confirmed primary (carried forward)	FOMC held 9-3 , three regional presidents dissenting for an immediate hike — first unified 3-member dissent since Sept 2016; Bank of America still projects 75bp of 2026 hikes even after the Aug 12 cool CPI	Still a live tension against this cycle's dovish data — not erased by own stated view
RESOLVED — Sept 15-16, 2026 (carried forward)	FOMC hiked, confirming the corrected, larger hawkish repricing this cycle's Aug 29 re-rate anticipated	Confirmation, not a surprise — see the FIRED Sept 16 row at top f (the dot plot)
Ongoing	Iran/Hormuz oil-inflation risk — see Iran War Risk pillar for the current read	Watch for pass-through into the next CPI/PPI cycle — a worsening

The flip line, updated Sept 22: two more independent regional Fed surveys (Philadelphia Fed, NY Fed Empire State) point the same soft-hawkish direction as everything since Sept 4 — cooling headline activity, re-confirmed pivot: both surveys are sentiment, not hard data, and both surveys' own forward components fell. If the next hard CPI/PCE/PPI print or FOMC communication confirms the prices-paid re-acceleration, treat down harder. If Sept and October data instead show the disinflation trend reasserting itself, treat this cycle's one-point cut as the high-water mark and re-rate back up.

Prior flip line, Sept 11: the Aug 13 cool CPI and weak claims print were the last genuine dovish confirmation this pillar found. Since then, the Aug 19 minutes' wider hawkish bloc, Warsh's Jackson Hole words, a h report (a sharp beat, +162,000 vs. ~53-55,000 consensus), and now the Sept 10 August PPI report (5.4% y/y headline, a 2026 high) have all pointed the same hawkish direction, with CME/market-implied Sept 15-1 range across sources — past coin-flip. Still not a confirmed pivot: Warsh explicitly declined to commit to a reaction function, and Fed officials remain publicly split (Warsh hawkish, Waller conditionally dovish). The pending as of this research pass, is now the next real test before Sept 15-16. If the Sept 15 FOMC actually delivers a hike, treat that as the real, final confirmation and re-rate down hard. If it holds or cuts despite th that as evidence the hawkish rhetoric outran the committee, and re-rate back up.

COMMITTED — SEPTEMBER 22, 2026 (2026-09-22_draft) · LIGHT DAILY TOUCH · AUTO-STAMPED · FED & MACRO RE-RATED DOWN

Sept 10 light daily catch-up (score set 2026-09-10 draft), prior cycle: re-checked — the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting both remain pending per BLS/Fed calendars; no release since Sept 9. **P HELD FLAT at 32/31/43/54/60.** Light daily touch, no window moved, master call band unchanged anywhere (Neutral → Neutral equal-weight, Mild Bull → Mild Bull horizon-weighted)

delegated daily auto-stamp authority, **this set is AUTO-STAMPED: status committed, stamped by "Alex (auto-stamped)."** Iran War Risk is the pillar that moved this cycle — see that report.

Prior cycle (Sept 9 light daily catch-up): re-checked directly against CME FedWatch-citing coverage — September hike odds read ~58.7%, consistent with the already-priced cluster; no new FOMC meeting, since Sept 3-4. **AUTO-STAMPED SEPTEMBER 9, 2026.**

Prior cycle (Sept 8 light daily catch-up): re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4; the Sept 11 CPI print and Sept 15-16 FOMC meeting remained. **STAMPED SEPTEMBER 8, 2026.**

Prior cycle (Sept 6 light daily catch-up): re-checked via WebSearch — no new Fed speech or data release since Sept 3-4; Sept 6 was a Saturday, markets and the Fed's calendar quiet. **AUTO-STAMPED SEPT 6, 2026.**

Sept 5 FULL WEEKLY refresh (2026-09-05_draft2) — *carried forward for context:* independently re-verified via WebSearch: Fed Governor Waller's genuinely dovish-leaning Sept 3 speech ("give disinflation a chance") to ~48% (Semafor, CNBC, Bloomberg, PBS) before the Sept 4 jobs beat reversed that back up to 60-66% (Forbes/CME FedWatch) — a net hawkish drift for the week consistent with the Sept 5 cut. **HELD FLAT AT 32/30/38/44/58. COMMITTED BY ALEX SEPTEMBER 5, 2026.** Iran War Risk, CLARITY Act, and Tokenization all held flat that cycle.

CORRECTION — flagged this cycle: the prior same-day light daily catch-up (2026-09-05_draft) reported "COMMITTED — AUTO-STAMPED SEPTEMBER 5, 2026" in its commit message, but config/scores.json never actually advanced from "draft" — a bug in that session. The last TRUE committed baseline for this pillar remains **2026-09-02_draft (36/35/45/55/61), auto-stamped Sept 3.** Not corrected retroactively because of Alex's call.

Prior cycle (Sept 2 light daily catch-up) — *carried forward for context:* held flat at 36/35/45/55/61; originally left as draft only because Iran War Risk's re-rate flipped the master call band, not for any reason in particular. **AUTO-STAMPED SEPTEMBER 3, 2026** once Alex widened the delegated daily auto-stamp policy. A Sept 3 check found nothing material on any pillar; config/scores.json was untouched that cycle.

Prior cycle (Sept 1 light daily catch-up) — *carried forward for context:* re-checked CME FedWatch odds and found continued drift, not a fresh shock: September hike odds moved to ~66% (Forbes/KuCoin, 11.8% to ~60.4% CNBC read the Aug 31 baseline used. No new H.4.1 or jobless claims release landed (Aug 31 was Labor Day). P held flat, AUTO-STAMPED, then the committed baseline.

Prior cycle (Aug 31 light daily catch-up) — *carried forward for context:* re-checked CME FedWatch odds and found continued drift, not a fresh shock: September hike odds moved from the ~56-58% cluster to ~60.4% by Aug 31 (CNBC's Jackson-Hole-analyst-roundup piece, up from ~56% Friday). No new H.4.1 or jobless claims release landed. P held flat, AUTO-STAMPED.

Prior cycle (Aug 29 full weekly refresh) — *carried forward for context:* Fed & Macro re-rated down further that cycle than a same-day catch-up draft written August 28 (score set 2026-08-28_draft) reached — self-checked, archived, or committed, and sits abandoned, superseded by this full weekly refresh. The underlying trigger is the same one that draft identified: Fed Chair Warsh's first Jackson Hole speech as Chair. The transcript, Aug 28, confirmed verbatim this cycle via direct fetch; corroborated by CNBC, PBS, Reuters/investing.com, CNN, and Yahoo Finance), which said cooler summer PCE/CPI readings "do not tell me the economy is meaningfully improved." A dedicated adversarial-verification pass this cycle caught a real error in the abandoned draft: its CME FedWatch September hike-odds figure (~35.4%→~45.7%) understated the actual odds. I pulled and cross-checked instead clusters tightly in the high-50s — Motley Fool at 57.5% (citing CME FedWatch directly), CNBC's own body text at "nearly 56%," and a third independent read at "55.7%" — meaningfully improved. A dedicated adversarial-verification pass this cycle caught a real error in the abandoned draft: its CME FedWatch September hike-odds figure (~35.4%→~45.7%) understated the actual odds. I pulled and cross-checked instead clusters tightly in the high-50s — Motley Fool at 57.5% (citing CME FedWatch directly), CNBC's own body text at "nearly 56%," and a third independent read at "55.7%" — meaningfully improved. Today. Two fresh, routine facts round out the picture: jobless claims (week ended Aug 22) came in tight at 203K vs. 208K consensus, and the Aug 26 H.4.1 release showed the known reserve-drain pattern on the balance sheet trigger-worthy. Together, the corrected, larger market move justifies a deeper cut than the abandoned draft reached: 1mo -7, 3mo -6, 6mo -3, 1yr -1, 3yr -1 versus the last committed baseline — minimum. P explicitly declined to commit to a reaction function and one repricing doesn't reach three years out.

(That Aug 29 cycle was left as a draft solely because full weekly refreshes are categorically excluded from delegated daily auto-stamp authority, regardless of move size — not for any evidentiary reason; every week has fewer.)

The prior committed scores were **34 / 33 / 44 / 54 / 60** (2026-09-16_draft), re-rated down to **32 / 31 / 42 / 54 / 60** (2026-09-17_draft, cloud) and corrected further to **32 / 30 / 38 / 44 / 58** (2026-09-17_draft, cloud) — SEP's Table 1 directly, where the end-2027 median federal funds rate reads 4.1% against 3.6% in June. **32 / 30 / 38 / 44 / 58 has now held flat for two straight cycles (Sept 17, Sept 18)** — nothing this cycle moved it further — **AUTO-STAMPED SEPTEMBER 18, 2026.**

Override any P and re-stamp — the master blend recomputes.

What Changed Since Last Check

LIGHT DAILY touch, September 22, 2026 (score set 2026-09-22_draft, draft, awaiting stamp) — *checking for changes since the 2026-09-19_draft (still draft) baseline; targeted single-pillar follow-up, not a full four-pillar pass. This pillar has three near windows to 31/29/37/44/58.*

- ★ ★ **NEW this cycle — Philadelphia Fed Manufacturing Business Outlook Survey, released Sept 17, 2026 (primary source page confirmed at philadelphiafed.org, 5+ independent corroborations):** general business conditions cooled, prices paid jumped to 37.8 from 47.4, but **prices paid rose to 48.6 from 40.9** and **prices received rose to 31.3 from 17.7**; employment fell sharply (11.8 from 27.9) and future activity fell (52.9 from 73.6).
- ★ ★ **NEW this cycle — New York Fed Empire State Manufacturing Survey, released Sept 15, 2026 (PRIMARY, fetched directly from newyorkfed.org):** general business conditions cooled, prices paid jumped to 63.1 from 58.1 — the highest since July 2022 — and **prices received rose to 28.1 from 23.1**, a three-month high.
- **Why this clears the sufficiency bar:** two independent Fed district banks' own primary surveys, same week, same directional signal (headline cooling, input-cost/selling-price pressure re-accepted), same sources in the same input class.
- **Why only one point:** both are soft/sentiment surveys whose own forward-looking components also fell, and market pricing turned risk-on into Sept 18-19 (10-year off its 5.04% high to ~4.9% price, not scored).
- **CLARITY Act, Iran War Risk, and Tokenization carried forward unchanged** — not re-researched this cycle; this is a targeted single-pillar touch, not a full weekly pass.
- **Score decision: RE-RATED DOWN one point on 1mo/3mo/6mo, 32/30/38/44/58 → 31/29/37/44/58;** 12mo/36mo held. Sourcing clears the sufficiency rule — **AUTO-STAMPED: status committed (auto-stamped)."**

Carried forward — what changed in the September 19 FULL WEEKLY refresh (2026-09-19_draft, still draft), for continuity:

FULL WEEKLY refresh, September 19, 2026 (score set 2026-09-19_draft, draft, awaiting Alex's stamp) — *checking for changes since the 2026-09-18_draft committed baseline. This pillar HELD FLAT at 32/30/38/44/58.*

- ★ ★ **NEW this cycle — jobless claims, week ended Sept 12 (DOL, primary, released Sept 17): 196,000**, the lowest since mid-July; four-week average 203,250. Confirmatory of the already-priced information.
- ★ ★ **NEW this cycle — housing data (Census Bureau/HUD and NAR, primary, released Sept 17 and Sept 10): housing starts -2.6% m/m, permits -2.7% m/m, existing-home sales -2.1% m/m**, internally mixed cooling signal (single-family starts actually +7.6%) — insufficient alone to move P.
- **Background color, not scored — University of Michigan preliminary September sentiment fell to 47.8 from 51.7**, near a record low, with 1yr inflation expectations up to 4.6%; predates the Fed's move.
- **Market-price context, not scored:** the 10-year Treasury briefly touched a 19-year high near 5.04% before settling near 4.95%; CME FedWatch prices 55.1% odds of another hike at the October meeting.
- **Logged, not scored — a high-profile political story:** President Trump and senior administration officials publicly pressured the Fed against hiking, with Trump demanding rates be cut to "11% or lower" with a unanimous FOMC to hike anyway. Well-corroborated across 8+ independent outlets — a governance/Fed-independence storyline, not new economic evidence.
- **Score decision: HELD FLAT at 32/30/38/44/58.** Full independent primary-source research this cycle; nothing cleared the sufficiency bar. FULL WEEKLY refresh — categorically excluded from delegated daily auto-stamp authority, regardless of finding — **LEFT AS DRAFT for Alex's manual review.**

Carried forward — what changed in the September 18 light daily touch (2026-09-18_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 18, 2026 (score set 2026-09-18_draft, committed, auto-stamped) — *checking for changes since the 2026-09-17_draft2 committed baseline. This pillar HELD FLAT at 32/30/38/44/58.*

- **Re-checked for a new dated development — found none.** The Sept 16 FOMC dot-plot revision already drives this window's read in the currently committed set.
- **A Sept 18 Motley Fool piece discussing "the most important number" in the Fed's Summary of Economic Projections is single-source commentary** on the same already-priced primary source. SEP table this pillar already cited in the Sept 17 correction) — not a new dated fact, does not move P.
- **Score decision: HELD FLAT at 32/30/38/44/58.** No window moved; nothing new cleared the sufficiency bar. AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the September 17 light daily touch (2026-09-17_draft / draft2, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 17, 2026 (score set **2026-09-17_draft**, committed, auto-stamped) — checking for changes since the 2026-09-16_draft committed baseline. **This pillar RE-RATED DOWN to 32/31/42/54/60 (cloudy, merge set).**

- **The September FOMC decision landed:** the Fed raised the federal funds target range 25bp to 3.75%-4.00% (12-0 vote), its first hike in three years (federalreserve.gov, primary; corroborated Perspectives, Coinpedia, coingape). The hike itself was ~92.5% priced into market odds beforehand, so per the sufficiency rule it does not alone move P.
- **The SEP/dot plot is new primary information:** 16 of 18 officials expect another 2026 hike (12 of 18 pencil in one more 25bp move by year-end to 4.125%); a slower, more cautious 2027-20 long-run neutral rate anchored near 3.0%.
- **Bitcoin's reaction was muted** (~\$76,300 on the statement, drifting back to hold near \$76,000-198) — consistent with the hike being anticipated; the incremental signal is in the dot plot, not P.
- **Score decision: RE-RATED DOWN to 32/31/42/54/60** — 1mo 34→32, 3mo 33→31, 6mo 44→42; 12mo/36mo held flat. **AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the September 16 light daily touch (2026-09-16_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 16, 2026 (score set **2026-09-16_draft**, committed, auto-stamped) — checking for changes since the 2026-09-15_draft committed baseline. **This pillar HELD FLAT at 34/33/44/54/60.**

- **The September FOMC decision had not landed yet.** The decision, statement, Summary of Economic Projections and dot plot were scheduled for **September 16 at 2:00pm ET**, with the press conference executed at ~08:03 ET, before the release.
- **No new BLS/Fed/BEA primary release found** since the August CPI/PPI prints already priced.
- **Score decision: HELD FLAT at 34/33/44/54/60.** No window moved; nothing new cleared the sufficiency bar.

Carried forward — what changed in the September 15 light daily touch (2026-09-15_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 15, 2026 (score set **2026-09-15_draft**) — checking for changes since the 2026-09-14_draft committed baseline.

- **The September FOMC convened Sept 15, but nothing was knowable yet.** The decision, statement, SEP and dot plot did not land until Sept 16 at 2:00pm ET. Markets leaned toward a 25bp hike after Fed Chair Warsh's August 28 Jackson Hole speech and a solid August jobs report — a read already priced into this set; market-implied odds are market prices, never used to move a P.
- **No new BLS/Fed/BEA primary release** since the August CPI (Sept 11) and August PPI (Sept 10) already priced.
- **Score decision: HELD FLAT at 34/33/44/54/60.**

Carried forward — what changed in the September 14 light daily touch (2026-09-14_draft, committed, auto-stamped), for continuity:

LIGHT DAILY touch, September 14, 2026 (score set **2026-09-14_draft**) — checking for changes since the 2026-09-13_draft committed baseline.

- **No new primary macro release since the last check.** Nothing from BLS, the Federal Reserve, or BEA landed Sept 13-14; the August CPI (released Sept 11) and August PPI (released Sept 10) already priced.
- **The September 15-16 FOMC — with the SEP and dot plot — has not yet happened.** The decision and statement are due **September 16**. That is the next dated catalyst for this pillar and its P.
- **Market-implied hike odds are a MARKET PRICE and are explicitly not used to move P.** Reads circulating this week span a wide **66-83%** band across sources for a 25bp hike — reported hedges into an institutional estimate.
- **Score decision: HELD FLAT at 34/33/44/54/60.** No window moved. Nothing dated and primary-sourced arrived to move it.

Carried forward — the September 12 FULL WEEKLY refresh, for continuity:

FULL WEEKLY refresh, September 12, 2026 — checking for changes since this morning's committed baseline (2026-09-12_draft, auto-stamped).

- **Re-verified August CPI (BLS, released Sept 11) independently:** headline +0.4% m/m / +3.4% y/y, core +0.3% m/m / +2.4% y/y, shelter +0.3% m/m / +3.0% y/y — matches the figures already reported; no discrepancy found.
- ★ **★ NEW this cycle — August PPI (BLS, primary, released Sept 10, 2026; corroborated by CNBC, CNN, Yahoo Finance — 3+ independent outlets).** Headline final demand +0.4% m/m (in annual PPI reading of 2026 — but more than three-quarters of the monthly gain is attributable to volatile energy costs (diesel fuel +24.1% alone). Core PPI (ex food/energy) came in at +0.3% m/m reading (+0.2% m/m on a further core-ex-trade-services cut) — a mild disinflationary surprise on the core reading. **Net read: reinforces, rather than contradicts, the already-priced "cooling" narrative; not a distinct new directional catalyst, so it does not move P despite being a fresh, primary-sourced, sufficiency-qualified release.**
- **DOL initial jobless claims, week ending Sept 5 (released ~Sept 11, primary): 206,000, down 1,000 w/w, 4-week average 206,000** — steady, unremarkable, no signal.
- **CME FedWatch-tracked market-implied odds of a 25bp hike at the Sept 15-16 FOMC read ~62-69% this week (as of Sept 10-11) — a market price only, not an institutional estimate.** Flagged for the record: meaningfully lower than the ~90% figure referenced in the prior (this morning's) daily cycle's background note — both reported as market-price snapshots at different times; not resolved or editorialized on.
- **Fed Chair Warsh: no new substantive remarks since the Aug 28 Jackson Hole speech.** A Sept 9 Marketplace piece characterizing him as withholding forward guidance ahead of the meeting was a characterization, not a new quantifiable dated event — flagged as single-source, does not move P.
- **The Sept 15-16, 2026 FOMC meeting has NOT yet occurred** as of this research (Sept 12) — flagged prominently as this pillar's next real catalyst, most acute on the 1mo/3mo windows, rather than P anticipation.
- **Score decision: P HELD FLAT at 34/33/44/54/60 — FULL WEEKLY REFRESH, left as DRAFT for Alex's manual review (weekly refreshes are categorically excluded from delegated daily authority).**

Carried forward — what changed in the Sept 12 light daily catch-up (2026-09-12_draft, auto-stamped this morning), for continuity:

- **Re-checked — no new Fed speech or primary data release found since the Sept 11 CPI print.** The Sept 15-16 FOMC meeting remains the next dated catalyst.
- **Logged, not scored:** that morning's coverage of ~90% market-implied September hike odds and Fed Chair Warsh's hawkish framing traced to his Aug 28 Jackson Hole remarks, not a fresh SEP figure itself was a market price, not used to move P.
- **Score decision: P HELD FLAT at 34/33/44/54/60.** No window moved, master call band unchanged everywhere — **AUTO-STAMPED per delegated daily authority**, the last COMMITTED baseline.

Carried forward — what changed in the Sept 10 light daily catch-up, for continuity:

- **Sept 10, light daily catch-up:** re-checked — the Aug CPI release (due Sept 11) and the Sept 15-16 FOMC meeting both remained pending per BLS/Fed calendars; no new Fed speech or primary data release found. **FLAT at 32/31/43/54/60 — AUTO-STAMPED.**

Carried forward — what changed in the Sept 9 light daily catch-up, for continuity:

- **Sept 9, light daily catch-up:** re-checked directly against CME FedWatch-citing coverage — September 25bp-hike odds read ~58.7% (as of Sept 7, CNBC/cryptonews), consistent with the ~50% fresh move. No new FOMC meeting, no new BLS/DOL primary release since Sept 3-4; the Sept 11 CPI print and Sept 15-16 FOMC remain the next dated catalysts.
- **Score decision: HELD FLAT at 32/31/43/54/60 — AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the Sept 8 light daily catch-up, for continuity:

- **Sept 8, light daily catch-up:** re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4. The Sept 11 CPI print and the Sept 15-16 FOMC meeting remain to be released; have not yet landed.
- **Score decision: HELD FLAT at 32/31/43/54/60 — AUTO-STAMPED per delegated daily authority.**

Carried forward — what changed in the Sept 6 light daily catch-up, for continuity:

- **Sept 6, light daily catch-up:** re-checked via WebSearch — no new Fed speech, data release, or FOMC commentary since Sept 3-4 (Waller's dovish-leaning Sept 3 speech and the Sept 4 BLS report captured in the Sept 5 re-rate, +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%). September 6 is a Saturday — no data or speeches scheduled. The Sept 11 CPI print remains to be yet landed.
- **Score decision: HELD FLAT at 32/31/43/54/60.** No window moved; nothing this cycle clears the sufficiency bar for a further move in either direction.

Carried forward — what changed in the Sept 5 FULL WEEKLY refresh (2026-09-05_draft2, committed by Alex Sept 5), for continuity:

- ★ ★ **NEW — August jobs report (BLS, primary, Sept 4): nonfarm payrolls +162,000 vs. ~53-55,000 consensus, unemployment steady 4.1%.** Corroborated by CNBC, Yahoo Finance, TheStreet.com, Investing.com/Reuters.
- ★ ★ **NEW — Sept 15-16 FOMC hike-odds pricing moved higher off the jobs beat** (roughly 60-66% across sources, up from the Sept 2 baseline's "~60% hold" framing); 2yr yield +5.3bp to 4.55%; Dow/S&P/Nasdaq all lower; BTC fell ~2% same-day (\$81,265.00→\$79,676.60).
- **Score decision: RE-CONFIRMED the re-rate at 32/31/43/54/60** (1mo -4, 3mo -4, 6mo -2, 1yr -1, 3yr -1 vs. the Sept 2 TRUE committed baseline) — the fresh, dated, primary-sourced jobs report re-verification, net of Waller's offsetting dovish-leaning Sept 3 speech. This is a FULL WEEKLY refresh, categorically excluded from the delegated daily auto-stamp policy, so it went to manual review. **SEPTEMBER 5, 2026.**
- **Correction:** the same-day earlier 2026-09-05_draft's commit message claimed it was auto-stamped, but config/scores.json's status field was never actually advanced — a bug in that session. 2026-09-02_draft. Flagged for Alex, not corrected retroactively.

Carried forward — what changed in the Sept 3 light daily catch-up (no new score set), for continuity:

- **Re-checked CME FedWatch and the H.4.1/data calendar; nothing material found on any pillar dated Sept 2-3.** config/scores.json untouched; blend re-run against fresh quant data only.

Carried forward — what changed in the Sept 2 light daily catch-up (2026-09-02_draft), for continuity:

- **No new H.4.1 or data print found dated Sept 1-2.** September 15-16 FOMC market pricing (CME FedWatch roughly 60% hold) continued the same post-Jackson-Hole drift already priced in by the data-driven move. Per the sufficiency rule and this pillar's own standing discipline against chasing drift, it did not independently move P.
- **BTC traded at \$76,581.44 on Sept 2** — down from \$78,038.78 on Sept 1 (Bitstamp), a real pullback driven by the Iran War Risk escalation covered in that pillar's report, not by anything here.
- **Score decision: HELD FLAT at 36/35/45/55/61.** No window moved for this pillar. This cycle's shared score set (2026-09-02_draft) was originally left as draft — Iran War Risk's sharp re-rate flip on equal-weight call band — and was **COMMITTED, AUTO-STAMPED SEPTEMBER 3, 2026**, once Alex widened the delegated daily auto-stamp policy.

Carried forward — what changed in the Sept 1 light daily catch-up (2026-09-01_draft, auto-stamped), for continuity:

- **CME FedWatch September hike odds continued drifting up, not a fresh shock:** ~60.4% (Aug 31 baseline, CNBC) → ~66% (Forbes/KuCoin, 11:40am ET Aug 31) — the same post-Jackson-Hole primary print or news event behind it. Market-odds drift alone cannot move P per the sufficiency rule and this pillar's own standing discipline against chasing drift.
- **No new H.4.1 or jobless claims release landed Aug 31-Sept 1** — Aug 31 was Labor Day, a US federal holiday; next H.4.1 is due Sept 3.
- **BTC traded at \$78,038.78 on Sept 1** — down from \$78,447.16 on Aug 31 (Bitstamp).
- **Score decision: HELD FLAT at 36/35/45/55/61.** Light daily touch, no window moved, no call band flipped — **AUTO-STAMPED** per delegated daily authority, then the committed baseline. In this cycle — see that report.

Carried forward — what changed in the Aug 31 light daily catch-up (2026-08-31_draft, auto-stamped), for continuity:

- **CME FedWatch September hike odds continued drifting up, not a fresh shock:** ~56-58% (Aug 29 baseline) → ~57% (CoinSpectator/Bitcoin.com, Aug 30) → ~60.4% (CNBC Jackson-Hole report, ~56% Friday). Market-odds drift alone, without a fresh primary print or news event, cannot move P per the sufficiency rule.
- **No new H.4.1 (next due Sept 3, last Aug 27) or jobless claims release landed in this window.**
- **BTC traded at \$78,447.16 on Aug 31** — up from \$77,666.16 on Aug 29 (Bitstamp).
- **Score decision: HELD FLAT at 36/35/45/55/61.** AUTO-STAMPED per delegated daily authority.

Carried forward — what changed in the Aug 29 full weekly refresh (2026-08-29_draft, now superseded), for continuity:

- ★ ★ **ADVERSARIAL CORRECTION — the abandoned Aug 28 draft's CME FedWatch September hike-odds figure was wrong.** Corrected from ~35.4%→~45.7% to the real ~35%→~56-58% (CME FedWatch directly; CNBC "nearly 56%"; a third independent read at 55.7%) — past coin-flip, not just approaching it.
- ★ ★ **CORRECTED — BTC's reaction to the speech.** Not a stable tape: BTC fell from above \$81,000 pre-speech to \$79,613.44 (Aug 28 close), continuing to \$77,666.16 by Aug 29.
- ★ ★ **NEW — jobless claims, week ended Aug 22 (DOL, primary, Aug 27): 203K vs. 208K consensus.** Mildly hawkish-adjacent, not independently trigger-worthy.
- ★ ★ **NEW — Fed H.4.1, week ended Aug 26 (federalreserve.gov, primary): reserves -\$10,351M w/w to \$2,924,936M; TGA -\$2,876M w/w to \$950,736M.** Routine continuation of the long-term trend, not trigger-worthy.
- **Carried forward, re-confirmed, not re-litigated — Fed Chair Warsh's first Jackson Hole speech as Chair (Aug 28) and July PCE (bea.gov, Aug 26, 3.7% y/y headline, 0.1pp hot).** Both 28 draft; verbatim-confirmed and re-sourced this cycle.
- **Score re-rate: 43/41/48/56/62 → 36/35/45/55/61** — 1mo -7, 3mo -6, 6mo -3, 1yr -1, 3yr -1, deeper than the abandoned draft's -5/-4/-2/-1/-1 because the corrected market move is bigger.
- **Status decision:** left as a draft, NOT auto-stamped, and flagged for Alex's manual review — this is a FULL WEEKLY refresh, categorically excluded from delegated daily auto-stamp authority review. Here also moved ≤7 points, well under the ~8-point threshold, so it isn't even a close call).

Carried forward — the abandoned Aug 28 catch-up draft (2026-08-28_draft) was written but never rendered, selfchecked, archived, or committed, for continuity:

- **That draft re-rated P to 38/37/46/55/61** on the same Warsh speech and PCE print this cycle re-verifies, using a since-corrected CME odds figure (~45.7%, now corrected to ~56-58%) and a real characterization (now corrected to a real, visible decline). It sits superseded; its underlying facts, corrected, are folded into this cycle above.

Carried forward — what changed in the Aug 22 full weekly refresh (score set 2026-08-22_draft2), for continuity:

- **NEW — FOMC minutes' hawkish bloc wider than previously known:** beyond the three named dissenters, "several participants" also favored a hike and "many participants" saw tightening as necessary to prevent a decline (federalreserve.gov, primary, Aug 19; corroborated by CNBC, Quartz, Newsquawk, goldsilver.com).
- **NEW — 30-year Treasury yield hit 5.31-5.33%, a ~19-year high,** around Aug 17-18, driven substantially by the CBO's raised \$2.1T FY deficit projection and heavy long-bond supply, not purely by Fed action (CNBC, Axios).
- **NEW — equities sold off Aug 20** (S&P -0.87%, Dow -1.32% partly Walmart-driven, Nasdaq -1%) with a partial Aug 21 recovery, attributed to a mix of the hawkish minutes and rising yields.
- **NEW — CME FedWatch/Kalshi/Polymarket/investing.com/defirate.com independently re-pulled and cross-checked directly:** September-hold odds cluster ~68-70% across all five, essentially matching the Aug 19 minutes — the hawkish content was already priced.
- **NEW — a circulating "93.6% September hike probability" claim was traced this cycle to a garbled conflation with Kalshi's July-meeting hold odds (~92-93% hold) and confirmed not explicitly discarded, not used.**
- **Re-confirmed, not new — jobless claims week ended Aug 15: 206K vs. 210K consensus, 4-week average 204K** (DOL, primary, Aug 20) — confirms the low-layoff trend already in the base.
