Bitcoin Technical Analysis
Quant Pillar Report

The Tape Itself — Measured, Scored, and Mapped to the Pillar Standard

Machine-computed from 16 years of daily price data through a 7-indicator scoring stack, halving-cycle analogs, and a power-law valuation model. Every number is reproducible from the scripts in the BTC-TA folder. ***These numbers are computed, not judged, so they carry no draft/committed status of their own — they enter the master blend directly. This cycle's active qualitative score set is 2026-11-02_draft (COMMITTED, AUTO-STAMPED NOVEMBER 2, 2026), a light daily touch built on 2026-10-31_draft (FULL WEEKLY refresh, still DRAFT, awaiting Alex's stamp) and the last committed set, 2026-10-29_draft. One qualitative pillar moved: Tokenization RWA RE-RATED UP on 1mo/3mo (58→59, 65→66) on DTCC's own Oct 28 press release confirming its Tokenization Service went live on time (primary, 4 independent outlets); CLARITY Act, Iran War Risk and Fed & Macro HELD FLAT. This quant pillar's own output eased on one window — BTC $77,604.41 is an INTRADAY Nov 2 read (local run, Bitstamp direct, not a finalized close); both the weekly bar (dated Nov 1, completed at +31.3) and the October monthly bar (completed at +7.8) rolled over, and the fresh weekly bar's one-day as-is reading (+24.0) pulled Model P 61/61/61/69/69 → 60/61/61/69/69, with the cycle-month clock advancing to 30.45 — and this pillar keeps resyncing unconditionally, unaffected by qualitative status, every cycle regardless.***

COINPICKS QUANT PILLAR REPORT · THE QUANTITATIVE SLEEVE OF MY THESIS

Data through November 2, 2026 — INTRADAY read (Nov 2 daily bar still forming), BTC $77,604.41 (local run, Bitstamp direct via run.py quant) · digest re-read & re-verified November 2, 2026 (LIGHT DAILY touch) (qualitative set: 2026-11-02_draft (COMMITTED, AUTO-STAMPED NOVEMBER 2, 2026), built on 2026-10-31_draft (FULL WEEKLY, DRAFT, awaiting Alex's stamp) and the last committed set 2026-10-29_draft (COMMITTED, AUTO-STAMPED October 29); Tokenization re-rated up on 1mo/3mo, the other three qualitative pillars HELD FLAT) · Not Financial Advice

The Scores — November 2 Model Output (Intraday Read)

Computed from daily data through a November 2, 2026 INTRADAY read (local run, Bitstamp direct via run.py quant — not the GitHub Actions relay, and not a finalized close; the Nov 2 daily bar is partial). Last qualitative touch: November 2, 2026, LIGHT DAILY touch — active set 2026-11-02_draft (COMMITTED, AUTO-STAMPED NOVEMBER 2, 2026). ***Both the weekly and the monthly bar ROLLED OVER this cycle:*** *the weekly bar dated 2026-11-01 completed (completed-bar composite +31.3) and a new bar dated 2026-11-08 has about one day of data; October's monthly bar completed (+7.8) and a new November bar (dated 2026-11-30) opened. Quarterly did not roll over. BTC $77,604.41, up 0.17% from last cycle's quoted $77,476.37 (Oct 31 finalized close, relay basis).* ***This pillar's own Model P MOVED DOWN on one window*** *(P 60/61/61/69/69, from 61/61/61/69/69 yesterday) — the 1-month window is 70% weekly tape, and the fresh one-day weekly bar reads +24.0 as-is versus +28.9 on the six-day bar it replaced; the cycle-month clock advanced to 30.45. One qualitative pillar moved this cycle (Tokenization, 1mo/3mo up) — see What Changed. Historical note: the October 3 divergence between two independently-researched weekly drafts (`2026-10-03_draft` vs. `_draft2`), carried as an open item through several prior cycles, was effectively superseded when Alex committed the October 10 weekly's lineage forward on October 14 — it remains in config/scores.json permanently per house rules, but is no longer an active blocker.*

WINDOW	MODEL P	QUALITY	IMPACT	SIGNAL	CALL
1 month	**60**	0.75	8	**+1.20**	Mild Bull — MOVED (was 61); the weekly rollover left a one-day bar reading +24.0 as-is (from +28.9); cycle-month clock advanced to 30.45, analog still 3-of-3 positive, median +9.0%
3 months	**61**	0.70	8	**+1.23**	Mild Bull — unchanged; still unanimous 3-of-3 positive, median +44.3%; alignment-shift fragility, disclosed
6 months	**61**	0.55	8	**+0.97**	Mild Bull — unchanged; still unanimous 3-of-3 positive, median +88.3%; alignment-shift fragility, disclosed
1 year	**69**	0.60	8	**+1.82**	Bull — unchanged; every prior cycle at this exact month was higher a year later (3-of-3), median +142.0%
3 years	**69**	0.50	8	**+1.52**	Bull — unchanged; value + cycle (36-month analog 3-of-3 positive, median +920.3%)

Impact: 8 (the tape aggregates every driver, but adds no causal force of its own) · **Formula:** Signal = ((P − 50) ÷ 50) × Quality × Impact · **Honesty cap:** P = 50 + 25 × (window score ÷ 100) — pure TA never claims odds more than 25 points from a coin flip, because its measured out-of-sample edge is modest. Math machine-verified.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds the tape is *good for Bitcoin* by then. Near-term as-is basis (weekly composite +24.0/100, Slight bullish, agreement 4-of-7, on the new bar dated Nov 8 with about one day of data; the just-completed bar dated Nov 1 finished at +31.3); long-term still high (at this exact point in prior cycles, the next 12 months were positive 3-for-3, median +142.0%, and price sits ~46% below its power-law fair value).

Quality — how trustworthy the evidence is. Highest near-term (weekly bars of history feeding the indicator stack), lowest at 3 years (only 3 completed cycles to learn from, and this cycle is already breaking the old pattern).

Impact — 8 out of 10, now the uniform value shared by every pillar; the TA pillar carries an equal 20% weight in the master, same as each qualitative pillar. Price is the thing itself — but a mirror, not an engine.

The Claim

The thesis, and where the numbers differ from the mood

The crowd: today's light daily touch ran research passes on all four qualitative pillars, primary sources first, and one move cleared the sufficiency rule. Tokenization RWA RE-RATED UP on 1mo/3mo (58→59, 65→66): DTCC's own press release, datelined Oct 28, 2026, confirms its Tokenization Service went live on time with 20 DTC clients signed (primary, corroborated by 4 independent outlets) — correcting the "unconfirmed" wording carried Oct 29–Nov 1; only +1 each because the rails are permissioned (Canton, DTCC's private Besu network), not public crypto rails. CLARITY Act HELD FLAT (no floor/committee/cloture action; the Senate returns the week of Nov 9; the Oct 29 Binance hot-wallet hack is logged as context, not scored). Iran War Risk HELD FLAT (none of the four flip-line clauses newly fired; Brent's latest FRED print, Oct 27 $123.10, keeps the already-priced >$100 clause firing; the pre-midterm no-strike pledge holds through Nov 3). Fed & Macro HELD FLAT (Oct 30 Logan/Musalem hawkish remarks confirm the already-priced Dec 9 hike; market-priced odds sit inside the priced band). The active set is 2026-11-02_draft (COMMITTED, AUTO-STAMPED NOVEMBER 2, 2026). The tape itself was near-flat: BTC $77,604.41 on an INTRADAY Nov 2 read (local run, Bitstamp direct), up 0.17% from last cycle's $77,476.37 relay close and +32.6% off the June 30 low (from +32.4%) — the tape doesn't know why price moved, only that it did.

The model: the weekly bar DID roll over this cycle — the bar dated 2026-11-01 (Oct 26–Nov 1) completed at **+31.3** on a $78,233.25 Sunday close (Bitstamp direct), and the new bar dated 2026-11-08 has about one day of data, reading +24.0 as-is (Slight bullish, agreement 4-of-7). The monthly bar rolled over too: October's bar completed at **+7.8** (down from September's +15.7) on a $77,429.98 Oct 31 close (Bitstamp direct; the relay's Oct 31 figure quoted last cycle was $77,476.37 — a small fetch-basis difference, 0.06%), and the new November bar (dated 2026-11-30) reads +8.3 as-is (Neutral, agreement 2-of-7). Q4 (quarterly, dated 2026-12-31) did not roll over, reading +31.5 as-is (Slight bullish, 4-of-7), with Q3's completed bar at +31.1. Repair Signal #1 (a weekly close above the 200-week MA) stays confirmed — the completed Nov 1 bar closed about +16.0% above its 200-week average ($67,467) — and price now sits +14.5% above the 200-week MA ($67,769) and +2.7% above the 50-week MA ($75,549). Model P moved DOWN on one window versus yesterday: 1-month P fell 61→60 (Signal +1.32→+1.20), mostly a rollover effect — the 1-month window is 70% weekly tape, and the fresh one-day bar reads +24.0 versus +28.9 on the six-day bar it replaced; the 1-month analog median also eased to +9.0% (from +9.9%), still 3-of-3. The cycle-month clock advanced to 30.45, and the analogs stayed unanimous 3-of-3 across all five windows. The 3-month and 6-month windows held exactly at P 61/61, and the two long windows hold exactly at P 69/69. Price is ~46% below fair value ($144,597), and the froth that precedes real crashes remains absent. No level flipped membership this cycle: $81,685 (2x touch) remains resistance, +5.3% above price (from +5.4%); the next resistance up is $88,269 (+13.7%, 2x).

The edge: the model reads three separate clocks that don't take a position on the news cycle — tape (confirmed at the weekly level, price below $81,685 resistance), cycle clock (bottoming window: prior cycles bottomed at months 26–30; we're at month 30.45, past the average-bottom date), and valuation (~46% below the power-law fair line, with price sitting above the −1σ "cheap" band at $72,285). All three clocks point the same direction on the medium-to-long horizon — the near-term clock is the one doing the day-to-day flexing, exactly as its lower Quality input says it should.

The Facts — The Tape

Computed from daily data through a November 2, 2026 INTRADAY read (BTC $77,604.41, local run, Bitstamp direct — the Nov 2 daily bar is partial; up 0.17% from last cycle's quoted $77,476.37 Oct 31 relay close, and down 0.80% from the Nov 1 Bitstamp close of $78,233.25). ***The weekly AND monthly bars rolled over this cycle*** *(new weekly bar dated 2026-11-08, about one day of data; new monthly bar dated 2026-11-30); quarterly did not; scores use the current bar as-is. Quantified: on completed bars only, weekly is* ***+31.3*** *(bar dated 2026-11-01, just closed; was +42.0 on the bar dated 2026-10-25), monthly* ***+7.8*** *(October's bar, dated 2026-10-31, just closed; was +15.7 on September's) and quarterly* ***+31.1*** *(Q3's bar, dated 2026-09-30, unchanged). Both readings are quoted deliberately — the as-is figure includes a bar that has not finished, and this cycle's weekly and monthly as-is bars are only one and two days old.*

- **Weekly composite +24.0/100 (Slight bullish), agreement 4-of-7 indicators** — on the new bar dated 2026-11-08, about one day of data (Nov 2). The just-completed bar dated 2026-11-01 (Oct 26–Nov 1) finished at **+31.3**, closing at $78,233.25 with RSI 52.2, MACD line 2,085 / histogram +1,270 and %B 0.65. On the current bar, price is above the 20-week ($73,713, +5.3%) and above the **200-week average ($67,769, +14.5%)**; price sits above the 50-week ($75,549, +2.7%). RSI 51.3; MACD line 1,851 with histogram positive (+828) but narrowing — momentum repair intact, fading; %B 0.61.

★ **Repair signal #1 (a weekly close above the 200-week MA) remains CONFIRMED.** The completed bar dated 2026-11-01 closed at $78,233.25, about +16.0% above its 200-week average ($67,467) and +3.3% above its 50-week ($75,733), with a completed-bar composite of **+31.3** (down from +42.0 on the bar before). Price now ($77,604.41) sits +14.5% above the current 200-week average ($67,769); the new bar (dated 2026-11-08, about one day of data) reads +24.0 as-is.

- **Monthly bar ROLLED OVER — October's bar completed at +7.8/100** (down from September's +15.7), closing at $77,429.98 (Bitstamp direct) with RSI 50.3, MACD line 626 / histogram −2,800 and %B 0.36. The new forming bar (November, dated 2026-11-30, two days of data) reads **+8.3/100 (Neutral), agreement 2-of-7** — below the 20-month average ($86,687, −10.5%), above the 50-month ($64,567, +20.2%); RSI 50.3; monthly MACD line 560 with histogram −2,293 — still negative, less so; %B 0.37. The rising monthly support trendline sits at $62,355; the monthly resistance trendline at $110,185.
- **Quarterly bar remains in its Q4 cycle (rolled over Oct 1) — Q3's completed bar holds at +31.1/100.** The forming bar (Q4, dated 2026-12-31) reads **+31.5/100 (Slight bullish), agreement 4-of-7** — comfortably above the 20-quarter average ($59,970, +29.4%) and the 50-quarter ($30,376, +155.5%); RSI 56.5, MACD line 15,778 with histogram −770; %B 0.65.
- **Levels that matter — no classification flip this cycle:** $81,685 (2x touch) remains resistance, +5.3% above price (from +5.4%). Above it, the nearest further resistance is $88,269 (+13.7%, 2x), then $98,090 (+26.4%, 2x). Below current price, the next support is $74,434 (−4.1%, 1x), then $59,930 (−22.8%, 1x) and $57,735 (−25.6%, 1x). The falling weekly support trendline sits at $35,186; the falling resistance trendline sits at $73,595, below current price.

★ **June 30 remains the cycle low: $58,526 close** — the flush tagged the Fib golden pocket ($54,257–$57,802 = 61.8–65% retrace of the $15,479 → $126,272 run) and has since built a **+32.6% bounce to $77,604.41**, up slightly from +32.4% yesterday. **$58,526 is still the line in the sand** — a decisive break back below it would undo this entire recovery leg.

Weekly tape, scored +24.0/100 as-is on the new forming bar (Slight bullish, dated Nov 8, about one day of data; the just-completed bar dated Nov 1 finished at +31.3) with agreement 4 of 7 indicators: the weekly close above the 200-week MA remains confirmed, MACD histogram remains positive, price above the 50-week MA, and $81,685 remains resistance, +5.3% above price. Machine-annotated from the same data that feeds the scores.

The Facts — The Cycle Clock & The Value Floor

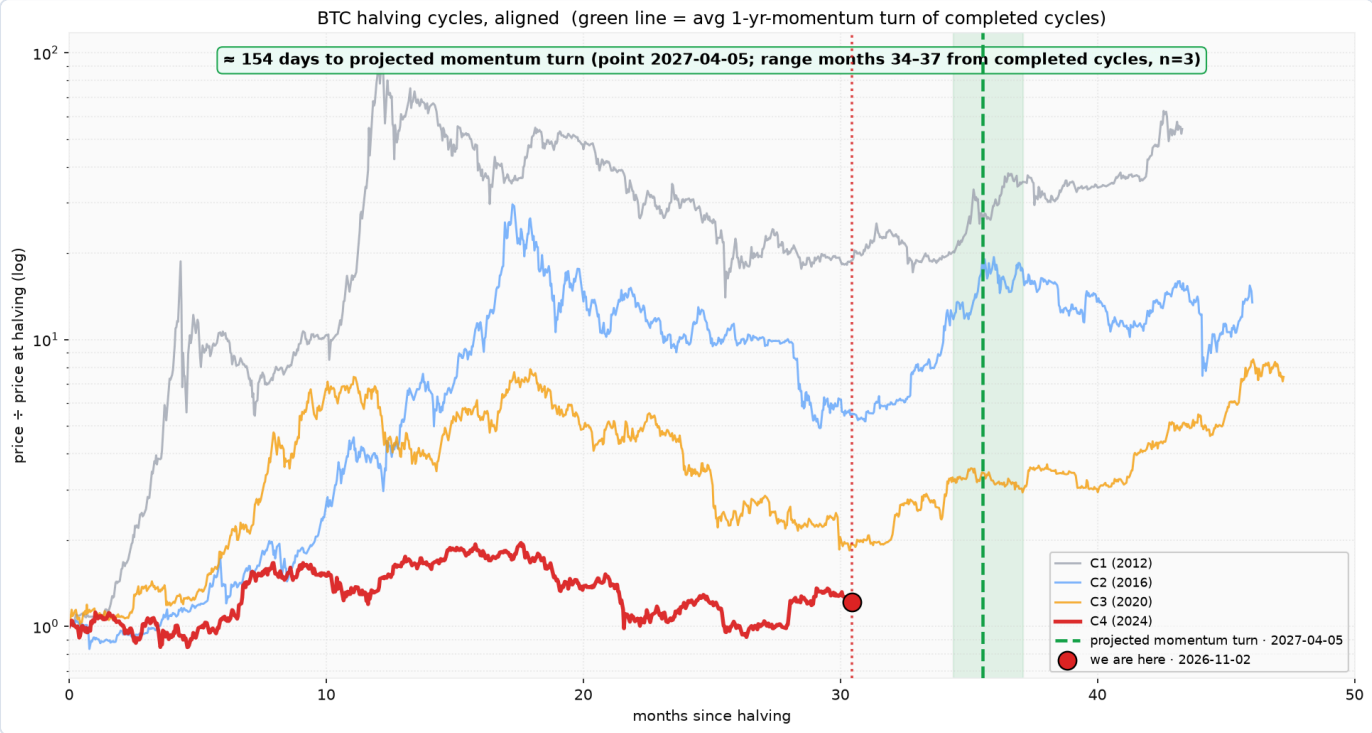

The two slower clocks. Same data, longer lenses.

- **The halving clock says "bottoming window."** The three completed cycles topped 12–18 months after their halving (avg 15.8) and bottomed at months 26–30 (avg 28.4). This cycle topped at month 18 (Oct 6, 2025 — $124,728) and printed its low-so-far at month 26 (June 30, $58,526, −53% from the top). **We are at month 30.45 — past the average-bottom date.**
- ★ **The cycle analogs are the spine of the long-window scores.** Standing at this exact cycle-month in C1/C2/C3: next 1 month positive **3-of-3** (median +9.0%, down from +9.9% yesterday) · next 3 months positive **3-of-3** (median +44.3%, from +49.7%) · next 6 months positive **3-of-3** (median +88.3%, from +81.4%) · next 12 months positive **3-of-3** (median +142.0%, from +143.9%) · next 36 months positive **3-of-3** (median +920.3%, from +1078.6%). *Fragility disclosure: the medians and agreement counts move as the cycle-month clock advances and as the underlying close is finalized — the same disclosed n=3 alignment fragility this report has always carried. Treat the analog levels as soft, the direction as the signal. And know what the 36-month number is: from month ~30 that window reaches month ~66 — it contains the NEXT halving's rally.*
- **1-year momentum turned positive at months 34–37 in every completed cycle (avg 35.5)** → still projects to **~April 2027** for this cycle.
- **The power-law floor:** a log-log fit over the full price series puts fair value at **$144,597** — price is **−46%** versus fair. Fit-window honesty: starting the fit in 2011, 2012, 2013, or 2015 instead moves fair value materially ($134,007 / $138,852 / $121,626 / $148,470) — the level is soft, but the **"well below fair" verdict holds across**

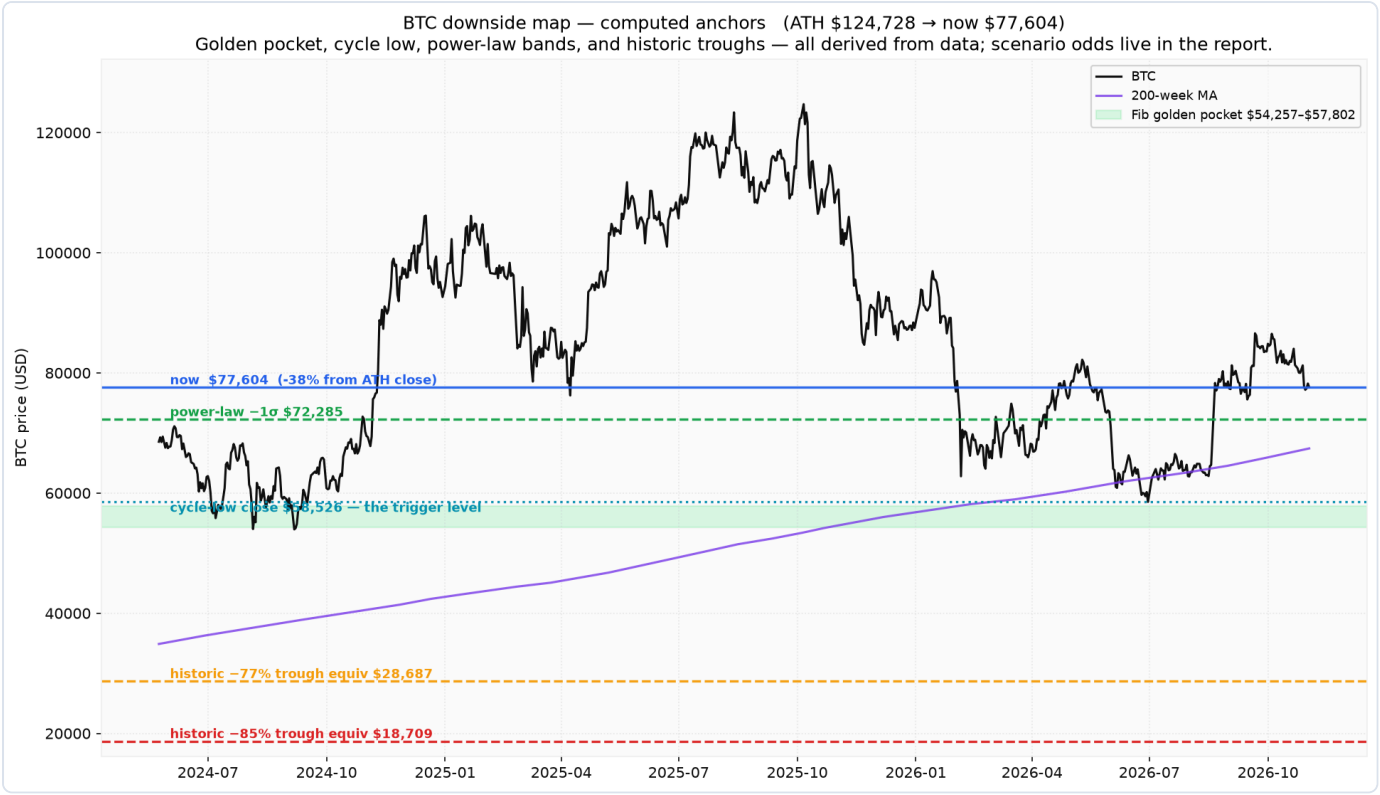

every window tested. Price ($77,604.41) sits above the **−1σ band ($72,285)**, by 7.4% — out of the "cheap" zone (the −2σ band sits at $36,136, far below). Every halving-era cycle trough was −77% to −85% from ATH ($18.7K–$28.7K equivalent today) — the pre-halving 2011 bear went ~−93% (~$8.7K equivalent), excluded from the range but in the data; this cycle's low-so-far was −53% from the ATH.

- **No froth in the system:** the altcoin-froth index reads z = −0.87 — the opposite of the euphoric signature that preceded prior deep crashes. Validated on 16 years of data: high-froth days led to −39% average 12-month drawdowns vs −23% for low-froth days (gap significant, 95% CI excludes zero). *Data lags ~6 weeks (through May 23, unchanged) — used as a tilt, not a score input.*

★ **What we rejected:** a 5-feature logistic crash model was tested leave-one-cycle-out and **failed** (AUC 0.44 vs 0.58 for froth alone; 0.70 = useful). It is not in this report's numbers. The scores rest only on what survived out-of-sample testing.

All four halving cycles aligned (log scale, price ÷ price-at-halving). Triangles mark where 1-year momentum turned positive in each prior cycle — months 34–37, projecting to ~April 2027 for this one. The red dot is today: month 30.45, past the historical bottoming window.

The downside map, updated after the June 30 flush: the projected $54K–$61K bottom zone was hit ($58,526 close / $57,735 intraday, inside the golden pocket's doorstep) and bounced. Odds re-weighted accordingly: ~40% the low is in, ~35% one more flush to $54–58K, ~17% deeper bear, ~8% tail.

The Prize

Illustrative only — not price targets, not advice

From $77,604.41: the 20-week average ($73,713) is behind us — price sits **+5.3%** above it; the 50-week average ($75,549) is further behind, price sitting **+2.7%** above it. A retest of the $124,728 ATH is **+60.7%**; the power-law fair line ($144,597) is **+86.3%**. The median 12-month analog from this cycle-month is **+142.0%**; the median 36-month analog is +920.3% — **discount that one hard**, it leans on regimes (2017 mania, post-COVID ZIRP) that don't repeat on demand.

The Prize doesn't feed the math — it tells you what the lean is worth acting on. Here it says: the tape eased on one of its five windows today (1-month P 61→60 — mostly the weekly rollover leaving a one-day bar at +24.0 as-is, not a cycle-analog flip; the cycle-month clock advanced to 30.45) while the other four windows held. On the qualitative side, Tokenization re-rated up on 1mo/3mo on DTCC's confirmed Oct 28 go-live; the other three pillars HELD FLAT (see What Changed). The tape's own three clocks (tape, cycle, valuation) kept pointing the same medium-to-long direction regardless — the $81,685 level stays resistance, +5.3% above price. The 1-year read holds at Bull (P 69, unchanged) and the 3-year read holds at Bull (P 69, unchanged).

The Other Side

The strongest honest case the model is wrong

- **n = 3.** Every long-window claim rests on three completed cycles. Three coin flips landing heads is not a law of nature.
- **This cycle already broke the pattern.** A −53% drawdown at month 26 vs −77/−85% in prior cycles could mean dampened cycles (bullish read) — or it could mean *the bottom isn't in*: a historic-depth trough from this ATH is

$18.7K–$28.7K, far below every level in this report.

- **The ETF era changed the machine.** Prior cycles had no spot-ETF flow channel, no CME basis trade at this scale, no corporate treasuries. Analogs may simply not transfer.
- **The power law is a curve fit, not a promise.** R^2 0.96 in-sample says nothing about a structural break — a fit like this "said cheap" through most of 2022's decline too. It bounds scenarios; it doesn't time anything.
- **The tape's edge is small by construction.** The honesty cap exists because measured predictive validity is modest (froth AUC 0.58). If you removed the cap, this report would be louder — and less true.

The Triggers

Price and dated events — some prove the read right, some prove it wrong

WHEN / LEVEL	EVENT	MEANS
$58,526	Daily close below the June 30 low	Flush scenario live — golden pocket $54.3–57.8K is the target; re-rate 1/3-month down
~$67,769	Weekly close above the 200-week MA	**CONFIRMED** — re-confirmed by the completed bar dated Nov 1 (close $78,233.25, about +16.0% above its 200-week MA, completed-bar composite +31.3); price now sits +14.5% above this level; the new bar dated Nov 8 has about one day of data, reading +24.0 as-is
~$75,549	Weekly close above the 50-week MA	**CONFIRMED** — the completed Nov 1 bar closed +3.3% above its 50-week MA; price sits +2.7% above it now, trend repair intact
~Aug 31, 2026	Historical average-bottom month (28.4) has now passed (we're at month 30.45)	Price sits well off the June 30 low (+32.6%, up slightly from +32.4% yesterday); a higher low + improving monthly momentum after this date = basing confirmed — September's completed monthly bar (+15.7) was such a sign, but October's completed bar softened to +7.8 (monthly MACD histogram still negative), so the monthly confirmation is not yet improving
Jan–Jul 2027	Projected 1-yr momentum turn window (point: ~Apr 2027)	Arriving without new lows = cycle thesis on track; re-rate 1-year up
$50,000	Weekly close below	−60% from ATH; the dampened-cycle story is failing — see the flip line

The flip line: a decisive weekly close below **$50,000** breaks the base case and the golden pocket both — treat the dampened-cycle thesis as broken and put the historic trough zone ($18.7K–$28.7K) back on the table. Above it, a bearish quarter is the plan, not a surprise.

My Decision

COMMITTED — AUTO-STAMPED NOVEMBER 2, 2026 · STAMPED BY: ALEX (AUTO-STAMPED) · COMPUTED OUTPUT — NO STAMP OF ITS OWN FOR THE QUANT PILLAR (it is never hand-edited) · THE QUALITATIVE SET IT BLENDS WITH IS 2026-11-02_draft (COMMITTED, AUTO-STAMPED NOVEMBER 2, 2026) — A LIGHT DAILY TOUCH: TOKENIZATION RE-RATED UP ON 1mo/3mo, THE OTHER THREE QUALITATIVE PILLARS HELD FLAT; THIS PILLAR'S OWN FIGURES MOVED ON TODAY'S LOCAL RUN — NOV 2 INTRADAY READ $77,604.41 (BITSTAMP DIRECT), WEEKLY AND MONTHLY BARS ROLLED OVER, MODEL P 60/61/61/69/69; ONE-WINDOW QUANT MOVE THIS CYCLE (1mo 61→60)

Computed P: 60 / 61 / 61 / 69 / 69 · Quality: 0.75 / 0.70 / 0.55 / 0.60 / 0.50 · Impact: 8 (uniform) · This pillar's signals: 1mo +1.20 · 3mo +1.23 · 6mo +0.97 · 1yr +1.82 · 3yr +1.52 · Model P MOVED DOWN on one window (1mo 61→60, on the weekly rollover's one-day bar; 3mo/6mo held at 61) · Master (equal-weight), this cycle's blend: 1mo −1.96 · 3mo −1.68 · 6mo −0.60 · 1yr +1.16 · 3yr +2.84 · THE FINAL NUMBER (this blend): −0.05 equal-weight (Neutral) / +0.49 horizon-weighted (Neutral), from −0.06 / +0.48 — the Tokenization re-rate more than offset this pillar's 1mo dip; no call-band flip anywhere · Leave-one-out: −0.09 / +0.67 / −0.76 / +0.33 / −0.40 (drop CLARITY / Iran / Tokenization / Fed / TA), range −0.76 to +0.67 (sign still flips — fragile) · BTC $77,604.41 (Nov 2 intraday read, local Bitstamp fetch, via run.py numbers)

This is the quantitative sleeve of the thesis — the same five windows, same formula, same table as every qualitative pillar, but computed instead of judged. The weekly bar DID roll over this cycle — the bar dated Nov 1 completed at +31.3 (down from +42.0 on the bar dated Oct 25), and the new bar dated Nov 8 has about one day of data, reading +24.0 as-is (4-of-7). The monthly bar rolled over too — October completed at +7.8 (down from September's +15.7) and the new November bar reads +8.3 as-is; Q4's quarterly bar continues forming at +31.5, with Q3's completed bar at +31.1. Model P moved down on one window: the 1-month window eased to P 60 (Mild Bull, was 61), mostly because the fresh one-day weekly bar reads lower than the six-day bar it replaced — the cycle-month clock advanced to 30.45, and the cycle analogs stayed unanimous 3-of-3, so this is a bar-rollover effect, not a new analog alignment shift. The 3-month and 6-month windows (P 61, Mild Bull) and the 1-year (P 69, Bull) and 3-year (P 69, Bull) windows all held exactly. The near-term read sits at 1mo (60, Mild Bull), 3mo (61, Mild Bull) and 6mo (61, Mild Bull) — the direction, not the level, is the signal; and with weekly and monthly as-is bars only one and two days old, quote the completed-bar figures (+31.3 / +7.8 / +31.1) alongside.

These numbers enter the master blend exactly as computed — this pillar has no override/re-stamp step of its own. Unlike the four qualitative pillars, this pillar carries no draft/committed status of its own: this cycle's active qualitative score set is 2026-11-02_draft (COMMITTED, AUTO-STAMPED NOVEMBER 2, 2026), a light daily touch on top of 2026-10-31_draft (FULL WEEKLY refresh, still DRAFT, awaiting Alex's stamp) and the last committed set, 2026-10-29_draft. Tokenization RWA RE-RATED UP on 1mo/3mo (58→59, 65→66) on DTCC's primary Oct 28 go-live release; CLARITY Act, Iran War Risk and Fed & Macro HELD FLAT. This pillar's own computed output is unaffected by qualitative status and enters the master blend the same way it does every cycle; this cycle it eased on one window on the weekly rollover, with price near-flat ($77,604.41 intraday, up 0.17% from $77,476.37).

What Changed Since Last Check

LIGHT DAILY touch, November 2, 2026 — local run, on a Nov 2 intraday read (Bitstamp direct); Tokenization re-rated up on 1mo/3mo — active_qual_set is 2026-11-02_draft (COMMITTED, AUTO-STAMPED NOVEMBER 2, 2026).

- **November 2, 2026 — LIGHT DAILY touch (local run, run.py quant, Bitstamp direct):** BTC **$77,604.41** is an INTRADAY Nov 2 read (the Nov 2 daily bar is partial; not the GitHub Actions relay, not a finalized close), up 0.17% from last cycle's $77,476.37 (Oct 31 relay close) and +32.6% off the June 30 low (from +32.4%). Basis note: the local Bitstamp-direct series prints the Oct 31 close at $77,429.98 and the Nov 1 close at $78,233.25. **The weekly bar ROLLED OVER:** the bar dated 2026-11-01 completed at **+31.3** (from +42.0 on the bar dated Oct 25); the new bar dated 2026-11-08 has about one day of data, +24.0 as-is (Slight bullish, 4-of-7). **The monthly bar ROLLED OVER too:** October completed at **+7.8** (from September's +15.7); the new November bar reads +8.3 as-is (Neutral, 2-of-7). Quarterly +31.5 as-is (unchanged), Q3 completed +31.1. **Model P moved DOWN on one window: 1mo 61→60** (Signal +1.32→+1.20, still Mild Bull), mostly the rollover: the 1-month window is 70% weekly tape, and the one-day bar reads +24.0 versus +28.9 on the six-day bar it replaced; cycle-month 30.39→30.45, analogs still unanimous 3-of-3 (medians 1mo +9.0% / 3mo +44.3% / 6mo +88.3% / 1yr +142.0% / 3yr +920.3%). 3mo/6mo held at P 61/61; 1yr/3yr at 69/69. Power-law fair $144,597 (−1σ $72,285, −2σ $36,136; fit-start range $121,626–$148,470; price still −46% vs fair). No level flipped membership ($81,685 still resistance, +5.3% above price). Master 1mo −1.97→**−1.96**, 3mo −1.71→**−1.68**; 6mo/1yr/3yr unchanged at −0.60 / +1.16 / +2.84. **THE FINAL NUMBER −0.06→−0.05 equal-weight (Neutral) / +0.48→+0.49 horizon-weighted (Neutral)**; leave-one-out −0.09 / +0.67 / −0.76 / +0.33 / −0.40, range −0.76 to +0.67 (sign still flips). No call band flipped. Qualitative: **Tokenization RE-RATED UP 1mo 58→59, 3mo 65→66** on DTCC's Oct 28 "Tokenization Service Goes Live" release (primary; 4 independent outlets), correcting the "unconfirmed" wording of the Oct 29–Nov 1 cycles; CLARITY Act, Iran War Risk and Fed & Macro HELD FLAT. New active set: 2026-11-02_draft (COMMITTED, AUTO-STAMPED NOVEMBER 2, 2026).
- **November 1, 2026 — LIGHT DAILY touch (cloud routine, fresh git clone):** Preflight (Step 0) found no same-day duplicate "daily"/"weekly" commit on origin/master — proceeded normally. data/btc_usd_daily.csv's last bar is now the FINALIZED October 31 close, **$77,476.37** (GitHub Actions data relay), up 0.28% from the Oct 30 finalized close of $77,256.82 and +32.4% off the June 30 low (from +32.0%). The weekly bar did NOT roll over (still the bar dated Nov 1, now six days into forming, Oct 26–31), reading +28.9 as-is (Slight bullish, 5-of-7, up from +28.2); monthly +7.9 as-is (Neutral, 2-of-7, from +7.6); quarterly +31.5 as-is (Slight bullish, 4-of-7, from +31.4); completed bars unchanged at +42.0 / +15.7 / +31.1. **Model P moved UP on one window: 1mo 60→61** (Signal +1.20→+1.32, still Mild Bull) as the slightly higher finalized close lifted the near-term tape composite; the cycle-month clock advanced 30.35→30.39 with the analogs staying unanimous 3-of-3 across all five windows — a tape-level move, not a new alignment-shift event. 3mo/6mo held at P 61/61; 1yr/3yr held at P 69/69. Power-law fair $144,424 (−1σ $72,197, −2σ $36,091, price still −46% vs fair); no level flipped membership ($81,685 still resistance, +5.4% above price, from +5.7% yesterday). Master 1mo −1.99 → **−1.97**; 3mo/6mo/1yr/3yr unchanged at −1.71 / −0.60 / +1.16 / +2.84. **THE FINAL NUMBER holds at −0.06 equal-weight (Neutral) / +0.48 horizon-weighted (Neutral)** — the 1mo nudge is real but too small to move either headline off its 2-decimal rounding this cycle; leave-one-out −0.10 / +0.66 / −0.75 / +0.32 / −0.41, range −0.75 to +0.66 (from −0.76/+0.65, sign still flips). No call band flipped. Four independent WebSearch research passes, one per pillar, found nothing clearing the sufficiency rule on any pillar, against the active 2026-10-31_draft baseline (status DRAFT, FULL WEEKLY refresh still awaiting Alex's manual review, identical P values to the Oct 29 committed baseline): **CLARITY Act** (Senate still in its State Work Period recess through ~Nov 6, unchanged; no floor/committee/cloture action found dated Oct 31–Nov 1; no fresher CFTC/SEC action beyond the already-logged Oct 5 ANPRM; no fresher whip-count or White House statement found across 6 distinct WebSearch queries); **Iran War Risk** (all four flip-line clauses unfired: DCAS still 21 US deaths; Trump's pre-Nov-3-midterm no-strike pledge holds, two days out; no new state entering with confirmed attribution; Brent-vs-$100 status remains genuinely UNRESOLVED — two uncorroborated single-source-grade snippets found, excluded under the sufficiency rule, not treated as resolving the question either way; the Vance letter/Qatar mediation track is unchanged since Oct 30); **Tokenization RWA** (Fed R-1899 and FDIC stablecoin rules remain at proposal stage, no finalization found; OKXICE's issuer-objection count has no corroboration newer than the already-logged Oct 26-28 figures, still effectively single-source via onebullex.com; DTCC's October full launch remains unconfirmed either way; rwa.xyz still stale, no November data); **Fed & Macro** (no new Fed-official remarks found Oct 31-Nov 1; the stopgap CR through Dec 11, 2026 confirmed intact; December 9 FOMC hike odds now readable across

several MARKET-PRICE sources — CME FedWatch-derived ~85%, OIS-derived ~73%, a futures/Polymarket aggregator ~70% — but this sits within/around the already-priced ~74-79% band logged Oct 16, not a large, well-corroborated move by this pillar's own standing practice; contrast the Oct 16 Warsh-remarks re-rate, which required a primary-source remark corroborated by 7+ outlets, not odds alone; does not independently move P). No new score set: 2026-10-31_draft (status DRAFT) remains active and unedited, still awaiting Alex's manual review as a full weekly refresh (categorically excluded from auto-stamp).

- **October 31, 2026 — FULL WEEKLY refresh (cloud routine, run separately from and after this same day's light daily touch below):** this pillar's own figures are unchanged from this morning's light daily touch — data/btc_usd_daily.csv's last bar remains the FINALIZED October 30 close, **$77,256.82**, Model P 60/61/61/69/69, Master 1mo/3mo/6mo −1.99/−1.71/−0.60, 1yr/3yr +1.16/+2.84. The qualitative side ran four independent, deeper WebSearch research passes, one per pillar, against the committed 2026-10-29_draft baseline and found nothing clearing the sufficiency rule on any pillar: CLARITY Act, Iran War Risk, Tokenization and Fed & Macro all HELD FLAT. A new dated set, **2026-10-31_draft** (P values identical to 2026-10-29_draft), is now active_qual_set. **Per CLAUDE.md, a full weekly refresh is categorically excluded from auto-stamp regardless of research quality or how flat the result** — 2026-10-31_draft stays DRAFT, awaiting Alex's manual review. **THE FINAL NUMBER holds at −0.06 equal-weight / +0.48 horizon-weighted**, unchanged by this weekly checkpoint; no call band flipped anywhere.
- **October 31, 2026 — LIGHT DAILY touch (cloud routine), earlier today:** data/btc_usd_daily.csv's last bar is now the FINALIZED October 30 close, **$77,256.82** (GitHub Actions data relay), down 4.67% from the Oct 29 finalized close of $81,041.93 and +32.0% off the June 30 low (from +38.5%). The weekly bar did NOT roll over (still the bar dated Nov 1, now five days into forming, Oct 26–30), reading +28.2 as-is (Slight bullish, 5-of-7, down from +41.4); monthly +7.6 as-is (Neutral, 2-of-7, from +14.2); quarterly +31.4 as-is (Slight bullish, 4-of-7, from +35.3); completed bars unchanged at +42.0 / +15.7 / +31.1. **Model P moved DOWN on three windows: 1mo 62→60, 3mo/6mo 62→61** (Signals +1.44→+1.20 / +1.34→+1.23 / +1.06→+0.97, all still Mild Bull) as the sharply lower finalized close pulled down the near-term tape composite; the cycle-month clock advanced 30.32→30.35 with the analogs staying unanimous 3-of-3 across all five windows — a tape-level move, not a new alignment-shift event. 1yr/3yr held at P 69/69. Power-law fair $144,338 (−1σ $72,153, −2σ $36,068, price now −46% vs fair, from −44%); no level flipped membership ($81,685 still resistance, +5.7% above price, from +0.8% yesterday). Master 1mo −1.95 → **−1.99**; 3mo −1.69 → **−1.71**; 6mo −0.59 → **−0.60**; 1yr/3yr unchanged at +1.16 / +2.84. **THE FINAL NUMBER −0.04 → −0.06 equal-weight (Neutral) / +0.49 → +0.48 horizon-weighted (Neutral)**; leave-one-out −0.11 / +0.65 / −0.76 / +0.32 / −0.41, range −0.76 to +0.65 (sign still flips). No call band flipped. Four independent WebSearch research passes, one per pillar, found nothing clearing the sufficiency rule on any pillar, against the active 2026-10-29_draft baseline (status COMMITTED, AUTO-STAMPED, unchanged): CLARITY Act (Senate still in its State Work Period recess through ~Nov 6, unchanged; no floor/committee/cloture action found dated Oct 29–31; no CFTC/SEC rulemaking action beyond the already-logged Oct 5 ANPRM); Iran War Risk (DCAS still 21 US deaths, unchanged; no new US strike on Iran proper, no new state entering; Iran has still not accepted or rejected VP Vance's Oct 25 direct-talks offer on the record, and Trump's Oct 29 "medical supplies only" dispute remains unresolved); Tokenization RWA (no further GENIUS Act rule finalization beyond the already-logged OCC rule; this window's OKXICE objector-count sourcing is internally inconsistent and uncorroborated, excluded per the sufficiency rule; DTCC's October launch remains unconfirmed either way); Fed & Macro (October jobs report not due until ~Nov 6, October CPI not due until ~Nov 10 — neither has landed; no new Fed-official remarks this window moving December odds beyond what's already priced). No new score set: 2026-10-29_draft (committed, auto-stamped) remains active and unedited.
- **October 30, 2026 — LIGHT DAILY touch (cloud routine):** data/btc_usd_daily.csv's last bar is now the FINALIZED October 29 close, **$81,041.93** (GitHub Actions data relay), up 1.3% from yesterday's local-pass Oct 29 intraday read of $79,991.36 and +38.5% off the June 30 low. The weekly bar did NOT roll over (still the bar dated Nov 1, still four days into forming, Oct 26–29), reading +41.4 as-is (Slight bullish, 5-of-7, up from +37.4); monthly +14.2 as-is (Neutral, 2-of-7, from +12.4); quarterly +35.3 as-is (Slight bullish, 4-of-7, from +34.3); completed bars unchanged at +42.0 / +15.7 / +31.1. **Model P moved on three windows: 1mo/3mo/6mo 61 → 62** (Signals +1.32→+1.44 / +1.23→+1.34 / +0.97→+1.06, all still Mild Bull) as the higher finalized close lifted the near-term

tape composite; the cycle-month clock holds at 30.32 — no new cycle-analog flip, unlike yesterday's move. 1yr/3yr held at P 69/69. Power-law fair $144,254 (−1σ $72,111, −2σ $36,047); no level flipped membership ($81,685 still resistance, +0.8% above price, from +2.1% yesterday). Master 1mo −1.97 → **−1.95**; 3mo −1.71 → **−1.69**; 6mo −0.60 → **−0.59**; 1yr/3yr unchanged at +1.16 / +2.84. **THE FINAL NUMBER −0.06 → −0.04 equal-weight (Neutral) / +0.48 → +0.49 horizon-weighted (Neutral)**; leave-one-out −0.08 / +0.68 / −0.74 / +0.34 / −0.41, range −0.74 to +0.68 (sign still flips). No call band flipped. Four independent WebSearch research passes, one per pillar, found nothing clearing the sufficiency rule on any pillar: CLARITY Act (Senate.gov's own tentative calendar confirms the State Work Period recess runs Oct 5–Nov 6, unchanged; no floor/committee/cloture action found dated Oct 29–30; no further CFTC/SEC action beyond the already-logged Oct 5 Reg CTX/Reg CAM ANPRM); Iran War Risk (no on-record Iranian acceptance or rejection of the Vance/Qatari talks offer found; no further Trump/US-official clarification of the letter's content beyond the Oct 29 dispute already logged; no new CENTCOM/DCAS casualty update or attack reporting found); Fed & Macro (October jobs and October CPI are not yet due — roughly Nov 6 and Nov 10 per secondary calendars, not BLS primary — and no new Fed-speaker guidance was found; current government-shutdown status for this window could not be independently confirmed either way, an open research gap, not a finding); Tokenization RWA (a single-outlet claim, OneBullEx, that OKXICE's objector count climbed to 33 is internally inconsistent across that outlet's own articles on the count's date and uncorroborated by Reuters/Cointelegraph/CoinDesk — single-source, excluded per the sufficiency rule, logged as a watch item pending corroboration; DTCC's launch remains unconfirmed either way; no GENIUS Act agency beyond the OCC has finalized a rule). No new score set: 2026-10-29_draft (committed, auto-stamped) remains active and unedited.

- **October 29, 2026 — LIGHT DAILY touch, SECOND same-day pass (LOCAL run, Windows Task Scheduler, ~8:45 AM ET):** run.py quant ran locally (Bitstamp reachable), delivering an Oct 29 intraday read of **$79,991.36** (the Oct 29 daily bar is partial), down 0.46% from the finalized Oct 28 close of $80,362.80 and +36.7% off the June 30 low. Weekly bar (dated Nov 1, forming) +37.4 as-is (from +39.4); monthly +12.4 (from +13.1); quarterly +34.3 (from +34.7); completed bars unchanged at +42.0 / +15.7 / +31.1. Cycle-month clock 30.29 → 30.32 **flipped the 1-month cycle analog from 1-of-3 to 3-of-3 positive** (median −1.5% → +3.9%) — it flipped the other way on Oct 28; the disclosed n=3 alignment fragility, not a trend change. Model P 55/61/61/69/69 → **61/61/61/69/69** (1mo Signal +0.60 → +1.32, still Mild Bull). Power-law fair $144,253 (−1σ $72,110, −2σ $36,047); no level flipped membership ($81,685 still resistance, +2.1% above price). Master 1mo −2.11 → **−1.97** (still Bear); 3mo/6mo/1yr/3yr unchanged at −1.71 / −0.60 / +1.16 / +2.84. **THE FINAL NUMBER −0.09 → −0.06 equal-weight (Neutral) / +0.47 → +0.48 horizon-weighted (Neutral)**; leave-one-out −0.10 / +0.66 / −0.75 / +0.32 / −0.41, range −0.75 to +0.66 (sign still flips). No call band flipped. Second research pass (all four qualitative pillars) found nothing clearing the sufficiency rule: BEA released September Personal Income & Outlays and the Q3 GDP advance estimate at 8:30 AM ET today (bea.gov, primary) — core PCE +0.3% m/m / 3.1% y/y and headline +0.5% m/m / 3.6% y/y, both at the pre-release consensus; Q3 real GDP +3.4% annualized, above the ~2.8–3.2% consensus range — an in-line inflation print plus a growth beat, logged in the Fed & Macro report, not scored. FRED DCOILBRENTEU re-read directly from this machine: Brent $123.10 on Oct 27 (latest observation; Oct 23 $128.30) — the Iran pillar's Brent >$100 flip-line clause (d) stays CONFIRMED FIRING, already priced. No new score set: 2026-10-29_draft (committed, auto-stamped by the cloud pass) remains active and unedited.

★ **October 29, 2026 — LIGHT DAILY touch:** data/btc_usd_daily.csv's last bar is now the FINALIZED October 28 close, **$80,362.80** (GitHub Actions data relay), down 0.40% from yesterday's Oct 28 intraday read of $80,686.94 and +37.3% off the June 30 low. The weekly bar did NOT roll over (still the bar dated Nov 1, now four days into forming, Oct 26–29), reading +39.4 as-is (Slight bullish, 5-of-7); monthly +13.1 as-is (Neutral, 2-of-7); quarterly +34.7 as-is (Slight bullish, 4-of-7); completed bars unchanged at +42.0 / +15.7 / +31.1. **Model P moved on one window: 3mo 62 → 61** (Signal +1.34 → +1.23, still Mild Bull) as the finalized close ticked the 3-month cycle analog back slightly (median +45.2%, still unanimous 3-of-3) — the disclosed n=3 alignment fragility, not a new finding; 1mo/6mo/1yr/3yr held at P 55/61/69/69. Power-law fair value $144,164 (unchanged; −1σ $72,064, −2σ $36,023); no level flipped membership ($81,685 still resistance, +1.6% above price, from +1.2%). Master 1mo −2.11 (unchanged, still Bear); 3mo −1.71 (from −1.69, still Bear); 6mo −0.60 (from −0.63, Mild Bear); 1yr +1.16 (from +1.14, Mild Bull); 3yr +2.84 (unchanged, Bull); **THE FINAL NUMBER moved to −0.09 equal-weight /**

+0.47 horizon-weighted (from −0.09/+0.46 yesterday) — no call-band flip anywhere; leave-one-out −0.14 / +0.62 / −0.79 / +0.29 / −0.41, range −0.79 to +0.62 (sign still flips). Four independent WebSearch research passes, one per pillar, found: CLARITY Act and Iran War Risk **HELD FLAT** (a multi-sourced Oct 25 VP Vance letter to Iran proposing direct talks is logged in that pillar's report as a watch item, not scored — unaccepted by Iran, disputed by Trump himself). Fed & Macro **HELD FLAT**: the Oct 28 FOMC held rates 10-2 (Cook and Hammack dissenting for a hike) — primary federalreserve.gov, multiply corroborated — but this confirms, rather than exceeds, the consensus already priced in the baseline, so it is logged but not scored. Tokenization **RE-RATED UP on 6mo/1yr only (70/77 → 71/78)**: the OCC finalized its GENIUS Act stablecoin rule Oct 21 (primary OCC/Federal Register, corroborated by 8+ independent outlets) — the first of six agencies to finalize, front-running this pillar's own Jan 2027 resolution point. **config/scores.json gained a new dated set this cycle** (**2026-10-29_draft**, now active, **AUTO-STAMPED** per Alex's delegated daily authority — status committed, stamped_by "Alex (auto-stamped)"). Master, 00_START_HERE and the three other qualitative pillar reports' quoted-number lines were resynced in the same pass.

★ **October 28, 2026 — LIGHT DAILY touch, SECOND same-day pass (LOCAL run, Windows Task Scheduler, ~8:45 AM ET):** run.py quant ran locally (Bitstamp reachable), delivering an Oct 28 intraday read of **$80,686.94** (the Oct 28 daily bar is partial), up 0.29% from the $80,453.34 Oct 27 close via GitHub Actions (this morning's cloud reading) and +37.9% off the June 30 low. The weekly bar did NOT roll over (still the bar dated Nov 1, now three days into forming, Oct 26–28), reading +40.2 as-is (Slight bullish, 5-of-7, from +39.5); monthly +13.7 as-is (Neutral, 2-of-7, from +13.3); quarterly +35.1 as-is (Slight bullish, 4-of-7, from +34.9); completed bars unchanged at +42.0 / +15.7 / +31.1. **Model P moved on one window: 1mo 58 → 55** (Signal +0.96 → +0.60, still Mild Bull) as the 1-month cycle analog flipped from 2-of-3 positive (median +0.4%) to 1-of-3 positive (median −1.5%) with the cycle-month clock advancing 30.26 → 30.29 — the disclosed n=3 alignment fragility, not a new finding; 3mo/6mo/1yr/3yr held at P 62/61/69/69 (medians +45.2% / +73.4% / +144.4% / +1084.9%, all still 3-of-3). Power-law fair value $144,164 (from $144,075; −1σ $72,064, −2σ $36,023); no level flipped membership ($81,685 still resistance, +1.2% above price, from +1.5%). Master 1mo −2.04 → −2.11 (still Bear), the other four master windows unchanged (−1.69 / −0.63 / +1.14 / +2.84); **THE FINAL NUMBER moved to −0.09 equal-weight / +0.46 horizon-weighted** (from −0.08/+0.47 this morning) — no call-band flip anywhere; leave-one-out −0.14 / +0.62 / −0.78 / +0.28 / −0.43, range −0.78 to +0.62 (sign still flips). A second research pass re-checked all four qualitative pillars (WebSearch and WebFetch both working from this machine, access NOT degraded): all four **HELD FLAT**, **config/scores.json again NOT touched** — active_qual_set remains **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review. One standing fact corrected: the Brent >$100 flip-line clause behind Iran War Risk, carried as “unverifiable in this sandbox” since Oct 10, was re-verified directly on FRED DCOILBRENTEU (primary, EIA Europe Brent spot FOB) from this machine — Oct 20 $115.22, the latest observation (Oct 8 high $130.18) — so it is CONFIRMED still firing (already priced since it first fired) and the multi-week open item is closed; the Kalshi-implied ~$92–97 read cited this morning is contradicted by the primary spot series. Master, 00_START_HERE and the four qualitative pillar reports' quoted-number lines were resynced in the same pass.

★ **October 28, 2026 — LIGHT DAILY touch (cloud routine, earlier this morning, on the Oct 27 close — its figures superseded by the local pass above):** four independent WebSearch research passes, one per pillar, primary-source-first, against the active 2026-10-24_draft baseline. All four pillars **HELD FLAT**, a twelfth straight cycle with no qualitative move: CLARITY Act (no reporting dated Oct 24-28 found on Senate floor/committee action, negotiator statements, or CFTC/SEC action; recess through ~Nov 6 stands); Iran War Risk (a single-source Oct 24 Shafaq News claim of another struck tanker in the Strait found no independent corroboration and no casualties reported, not scored; none of the four flip-line clauses fired; a Kalshi Oct-30-expiry market now implies Brent ~$92-97, market-priced, the first indirect signal in weeks suggesting Brent sits below the $100 flip-line, though the primary spot-price access gap remains open); Tokenization RWA (OKXICE's issuer-objection count grew further to 22, Reuters Oct 24, 16 Nasdaq + 6 NYSE-listed issuers led by Wells Fargo — continuation of the already-scored friction pattern, not a status change; a single-source, internally-inconsistent claim of 25 objectors excluded as unreliable; a single-source claim of three new SEC Innovation Exemption filers found but uncorroborated against SEC.gov, excluded per the sufficiency rule; DTCC's October launch remains unconfirmed); Fed & Macro (today, Oct 28, IS the FOMC decision date itself, due at 2:00/2:30pm ET, after this cycle's research

pass — no outcome exists yet to score; pre-meeting consensus ~80-87% hold/~13-20% hike unchanged from the Warsh-driven baseline; tomorrow's cycle must pick up the actual outcome once public). **config/scores.json was NOT touched** — active_qual_set remains **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review. This quant pillar's own output MOVED this cycle (GitHub Actions' Oct 27 daily bar, $80,453.34, up from $80,225.46; the weekly bar did NOT roll over, still the bar dated Nov 1, now reading +39.5 as-is, up from +38.7; Model P moved on one window, 58/62/61/69/69 from 58/61/61/69/69, as the 3-month cycle analog firmed further, still unanimous 3-of-3 positive). THE FINAL NUMBER moved to −0.08 equal-weight / +0.47 horizon-weighted (from −0.08/+0.46) — no call-band flip, entirely on the quant side.

★ **October 27, 2026 — LIGHT DAILY touch:** four independent WebSearch research passes, one per pillar, primary-source-first, against the active 2026-10-24_draft baseline. All four pillars **HELD FLAT**, an eleventh straight cycle with no qualitative move: CLARITY Act (Senate still in recess through ~Nov 6, no floor/committee action found dated Oct 26-27); Iran War Risk (no new confirmed Strait-of-Hormuz incident dated Oct 26-27; none of the four flip-line clauses fired; the Brent >$100 flip-line clause remains independently unverifiable in this sandbox, a standing multi-week gap); Tokenization RWA (WebSearch again surfaced only the Oct 19 objector notice, 16 objectors; no newer count or go-live confirmation found; DTCC's October launch target remains unconfirmed either way); Fed & Macro (the Oct 27-28 FOMC meeting is underway today, decision due tomorrow; FOMC blackout continues, no new primary data print or Fed-speaker remark found). **config/scores.json was NOT touched** — active_qual_set remains **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review. This quant pillar's own output MOVED this cycle (GitHub Actions' Oct 26 daily bar, $80,225.46, down from $80,532.72; the weekly bar also ROLLED OVER this cycle, the bar dated Oct 25 closing at a final +42.0; Model P moved on one window, 58/61/61/69/69 from 56/61/61/69/69, as the 1-month cycle analog flipped back from 1-of-3 to 2-of-3 positive). Also corrected a stale pair of weekly trendline figures quoted in prose ($37,084/$75,151) that had drifted out of sync with data/trendlines.csv; now reads $36,135/$74,373, matching the data exactly. THE FINAL NUMBER moved to −0.08 equal-weight / +0.46 horizon-weighted (from −0.09/+0.46) — no call-band flip, entirely on the quant side.

★ **October 26, 2026 — LIGHT DAILY touch:** four independent WebSearch research passes, one per pillar, primary-source-first, against the active 2026-10-24_draft baseline. All four pillars **HELD FLAT**, a tenth straight cycle with no qualitative move: CLARITY Act (Senate still in recess through ~Nov 6, no floor/committee action found dated Oct 25-26); Iran War Risk (no new confirmed Strait-of-Hormuz incident dated Oct 25-26; none of the four flip-line clauses fired; the Brent >$100 flip-line clause remains independently unverifiable in this sandbox, a standing multi-week gap); Tokenization RWA (WebSearch surfaced only the stale Oct 15 objector notice, no newer count or go-live confirmation found beyond the baseline's own Oct 19 figure of 16); Fed & Macro (the Oct 27-28 FOMC decision is now two days out, current hold/hike odds ~83-87%/~13-17% sit within the band the Oct 24 weekly already priced off Chair Warsh's Oct 16 remarks; FOMC blackout continues). **config/scores.json was NOT touched** — active_qual_set remains **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review. This quant pillar's own output MOVED sharply this cycle (GitHub Actions' Oct 25 daily bar, $80,532.72, up from $80,035.37; Model P moved on one window, 56/61/61/69/69 from 62/61/61/69/69, as the 1-month cycle analog flipped from unanimous 3-of-3 positive to 1-of-3). THE FINAL NUMBER moved to −0.09 equal-weight / +0.46 horizon-weighted (from −0.06/+0.47) — no call-band flip, entirely on the quant side.

★ **October 25, 2026 — LIGHT DAILY touch:** four independent WebSearch research passes, one per pillar, primary-source-first, against the active 2026-10-24_draft baseline. All four pillars **HELD FLAT**, a ninth straight cycle with no qualitative move: CLARITY Act (Senate still in recess through ~Nov 6, nothing beyond the Oct 24 weekly's own findings); Iran War Risk (attack tempo stays elevated, latest confirmed incidents unchanged since the Oct 24 weekly; EIA's own October STEO data — Brent averaged $114/bbl in September, Q4 forecast $104.69/bbl — corroborates but does not newly fire this pillar's already-"last confirmed FIRED" sustained->$100 flip-line clause; Petro Dolphin's 2 missing crew remain unresolved; none of the four flip-line clauses fired fresh); Tokenization RWA (OKXICE's objector count unchanged at 16; still not live; DTCC's October launch remains unconfirmed); Fed & Macro (Oct 28 FOMC three days out, current hold/hike odds ~84-87%/~13-16% sit within the band the Oct 24 weekly already priced off Chair Warsh's Oct 16 remarks; FOMC blackout continues). **config/scores.json was NOT touched** — active_qual_set remains **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review. This

quant pillar's own output MOVED this cycle (GitHub Actions' Oct 24 daily bar, $80,035.37, down from $81,500.31; Model P moved on three windows, 62/61/61/69/69 from 61/61/62/68/69). THE FINAL NUMBER moved to −0.06 equal-weight / +0.47 horizon-weighted (from −0.07/+0.47) — no call-band flip, entirely on the quant side.

- **October 24, 2026 — FULL WEEKLY refresh:** four independent parallel WebSearch research passes, one per pillar, primary-source-first. CLARITY Act, Iran War Risk and Tokenization all **HELD FLAT**: CLARITY Act (Senate still in its State Work Period through ~Nov 6, no floor/committee action found; a second, firmer-sourced read on the CFTC-ANPRM's Dec 14 comment deadline is procedural, not scored); Iran War Risk (attack tempo stays elevated but eased in the back half of October, no new deaths; Petro Dolphin's 2 missing crew remain unresolved with no new reporting either way; none of the four flip-line clauses fired); Tokenization RWA (OKXICE still not live under its 30-day issuer-notice clock; its disclosed objector count grew from 9 to 16, including Microsoft, Alphabet and Goldman Sachs — friction, not a launch; DTCC's launch remains unconfirmed). **Fed & Macro RE-RATED UP, 1mo only, 31→34:** Fed Chair Kevin Warsh's Oct 16 remarks at an IMF event in Bangkok (primary, 7+ independent outlets) declined to preview remaining 2026 FOMC decisions; Oct 28 hike odds then collapsed from ~33-47% to ~13-15%/~14% (market-priced). This quant pillar's own output is unchanged this cycle (GitHub Actions' Oct 23 daily bar, $81,500.31, same as this morning's sync; Model P 61/61/62/68/69 unchanged). **config/scores.json updated** — active_qual_set now points to **2026-10-24_draft**, still status DRAFT, awaiting Alex's manual review (a full weekly refresh, categorically never auto-stamped). THE FINAL NUMBER moved to −0.07 equal-weight / +0.47 horizon-weighted (from −0.08/+0.46 this morning) — no call-band flip, entirely on the qualitative side.
- **October 24, 2026 — LIGHT DAILY touch (earlier this morning, superseded by the full weekly above):** GitHub Actions' price-data relay delivered the October 23, 2026 daily bar, closing at **$81,500.31**, down 0.12% from the $81,597.19 Oct 22 close. This nudges the three tape composites and the weekly/monthly/quarterly SMA/RSI/MACD readings slightly (see below) and moves Model P on the 1-month window only (64→61), nudging THE FINAL NUMBER. All four qualitative pillars were independently re-checked via WebSearch this cycle and again **HELD FLAT**, an eighth straight cycle with no qualitative move — nothing cleared the sufficiency rule: CLARITY Act (Senate still in recess through Nov 9, no floor/committee action found; a dated Oct 23 report notes CLARITY backers cut Q3 lobbying spend, immaterial); Iran War Risk (an Oct 22 IRGC claim of 7 more tankers damaged, and Brent reportedly above $111/bbl around the same date, were both reported but neither independently confirmed nor verifiable against this pillar's own primary-source Brent threshold in this sandbox; none of the four flip-line clauses fired; the Petro Dolphin crew and Al Maqam claim remain unresolved/unconfirmed); Tokenization RWA (OKXICE still not live under its 30-day issuer-notice clock; its disclosed objector count grew to 16, including Microsoft, Alphabet and Goldman Sachs, more friction but no change to not-live status; DTCC's launch remains unconfirmed); Fed & Macro (FOMC blackout period, Oct 17-29, continues ahead of the Oct 27–28 meeting; no verifiable new data prints; no shutdown/funding status change). **config/scores.json was NOT touched** — active_qual_set remains **2026-10-17_draft**, still status DRAFT, awaiting Alex's manual review. THE FINAL NUMBER moved to −0.08 equal-weight / +0.46 horizon-weighted (from −0.07/+0.47) — no call-band flip.
- **October 23, 2026 refresh (prior cycle) in one line:** a routine daily tape sync on GitHub Actions' finalized Oct 22 close ($81,597.19, revised down from the $81,694.28 intraday read); Model P, this pillar's signals and THE FINAL NUMBER were unchanged by that revision, though the $81,685 level read back as resistance. Qualitative research again found nothing material on any of the four pillars.
- **Qualitative research today — a light daily touch, WebSearch against all four pillars, nothing material:** CLARITY Act: searched for Senate floor/committee action — found none; recess through Nov 9 stands. Iran War Risk: searched for new Strait-of-Hormuz developments — an Oct 22 IRGC claim of 7 tankers damaged is Iran's own unconfirmed claim; Brent reportedly above $111/bbl around the same date could not be independently verified against a primary series in this sandbox; the Petro Dolphin crew's status and the Al Maqam claim remain unresolved/unconfirmed; none of the four flip-line clauses fired. Tokenization RWA: OKXICE's objector count grew to 16 (from 9) per an Oct 19 update, including Microsoft, Alphabet and Goldman Sachs — friction, not a launch; DTCC's October target remains unconfirmed. Fed & Macro: confirmed the FOMC blackout period (Oct 17-29) continues; no Fed speakers, no verifiable new data prints. Nothing cleared the sufficiency rule on any pillar, so

all four HELD FLAT and **config/scores.json was NOT touched** — active_qual_set remains **2026-10-17_draft**, still status DRAFT, awaiting Alex's manual review of the Oct 17 full weekly checkpoint.

- **Price: $81,500.31 close (Oct 23), down 0.12% from the $81,597.19 Oct 22 close.** This pillar scores the tape, not the day's qualitative news.

★ **Repair signal #1 remains CONFIRMED:** price sits +21.3% above the 200-week average ($67,166).

- **The weekly bar (dated Oct 25) continues forming this cycle — no rollover.** Its as-is composite eased to **+46.3** (agreement 6/7), essentially flat vs. yesterday's +46.7 and below the just-closed bar dated Oct 18 at +49.9.
- **Monthly and quarterly bars remain in the bars opened by the Oct 1 rollover** — no new rollover this cycle. October (monthly) reads **+15.5** as-is (agreement 2/7, Neutral); Q4 (quarterly) reads **+36.3** as-is (agreement 4/7, down from 5/7, Slight bullish); the completed September and Q3 bars hold at **+15.7** and **+31.1**.

★ **Model P moved on one window: 1mo 64 → 61** (Signal +1.68 → +1.32); 3mo 61, 6mo 62, 1yr 68, 3yr 69 all held (Signals +1.23 / +1.06 / +1.73 / +1.52). The cycle-month clock advanced to **30.12**; the 1-month cycle-analog median eased from +9.0% (unanimous 3-of-3) to +7.3% (back to 2-of-3) — the driver of the P move; the other analogs ticked too (3mo +33.6%→+31.4%; 6mo +65.1%→+63.8%; 1yr +123.7%→+126.2%; 3yr +1052.1%→+1081.5%) without crossing a new rounded P value. Honesty note: analogs rest on **n=3 completed cycles** and single windows flip when alignment shifts by days — the direction is the signal, the levels are soft.

- **Power-law fair value: $143,721** (up from $143,632; price now −43% vs. fair). Fit-window sensitivity spans $120,950 (2013 start) to $147,815 (2015 start): quote it as a range, never a target.
- **Froth unchanged at z = −0.87**, still dated 2026-05-23 — Coin Metrics community data lags ~6 weeks, so this stays a robustness tilt, never a score input.
- **Levels note: no classification flip this cycle** — $81,685 (2x touch) remains resistance, price pulling further below it (+0.2%, up from +0.1%). The next resistance up is $88,269 (+8.3%, 2x). The falling trendlines are unchanged (support $37,084, resistance $75,151).
- **Data refreshed:** daily price data through the October 23, 2026 close via the GitHub Actions data relay; indicators/levels/scores/cycle/mapping read via `run.py numbers` (run.py quant itself is not run in this sandbox — its fetch step hits bitstamp.net, which this environment's egress proxy blocks).
- **Context:** this cycle's active qualitative score set is **2026-10-17_draft**, a FULL WEEKLY refresh built on the Oct 15 committed baseline (2026-10-15_draft, which re-rated Fed & Macro and Iran War Risk; CLARITY Act and Tokenization RWA held flat). All four qualitative pillars confirmed held flat again this cycle; status remains DRAFT, awaiting Alex's manual review. This quant pillar is computed fresh every run regardless of qualitative status.

★ **Master blend MOVED this cycle, on the quant side only:** THE FINAL NUMBER moved from −0.07 to −0.08 equal-weight (still Neutral); horizon-weighted moved from +0.47 to +0.46 (still Neutral). Only the 1-month master window moved (−1.98→−2.05, still Bear), tracking this pillar's own signal move — no qualitative pillar re-rated, no call-band flip anywhere. **Because THE FINAL NUMBER itself moved (even though config/scores.json did not), the Master report, 00_START_HERE and the four qualitative pillar reports' own quoted-number lines were updated this cycle too** — to keep run.py selfcheck's prose-consistency guard passing — while their qualitative research content stays untouched; this TA report resyncs fully every cycle per the standing rule.

Method & Sources

Everything is reproducible — the scripts and data live in the BTC-TA folder. Run order below.

- **Price data:** Bitstamp OHLC API (daily, 2011–2026, no key) via fetch_btc_history.py · Coin Metrics community reference price (2010–2011 close-only) via build_master_history.py — 5,838 days total, each row tagged by source.
- **Indicator stack:** indicators.py — SMA 20/50/200, EMA 12/26, RSI-14 (Wilder), MACD 12/26/9, Bollinger 20/2, OBV — on weekly (W-SUN), monthly, quarterly bars. levels.py — swing-cluster S/R + least-squares trendlines.

- **Scoring:** score.py — each indicator → conviction in [−100, +100] (bounded inputs mapped linearly, unbounded squashed with tanh); composite = fixed weights (MA .20, RSI .15, MACD .15, BB .15, S/R .15, OBV .10, TL .10); agreement = indicators sharing the composite's sign.
- **Cycle & value:** cycle_analysis.py — halving-aligned tops/bottoms/momentum turns, projections from C1–C3 · downside.py / downside_map.py — power-law bands (R^2 0.96) + historical troughs + 6-method bottom-zone synthesis · test_altcoin_froth.py — froth quartiles vs forward drawdowns, block-bootstrap CI.
- **The mapping (new):** pillar_mapping.py — window scores from tape composites + cycle analogs + power-law value; P = 50 + 25×(S/100); Quality rubric per window; writes data/pillar_scores.json for the master blend.
- **Run order:** fetch_btc_history → build_master_history → fetch_altcoin_data → indicators → levels → score → charts → cycle_analysis → downside → downside_map → pillar_mapping.
- **Honesty notes:** the weekly AND monthly bars rolled over this cycle — the weekly bar dated Nov 1 closed at +31.3 and the new bar dated Nov 8 (about one day of data) reads +24.0 as-is; October's monthly bar closed at +7.8 and the new November bar (two days of data) reads +8.3 as-is; the quarterly bar rolled over Oct 1, closing out Q3 (completed-bar composite +31.1), with Q4 still forming · today's price ($77,604.41) is an INTRADAY Nov 2 read from a local Bitstamp-direct fetch, not a finalized close; Bitstamp-direct and the GitHub Actions relay can differ slightly on the same day's close (Oct 31: $77,429.98 vs $77,476.37) · the multi-signal crash model failed out-of-sample (AUC 0.44) and is excluded · the AUC figures are the pipeline's own attestation · froth data lags ~6 weeks · n=3 on all cycle claims, and analog windows can cross into the next cycle · the 2024 halving is dated Apr 19 (US ET; block 840,000 hit Apr 20 00:09 UTC — 0.03 cycle-month effect) · S/R levels are algorithmic swing-clusters with 1–2 touches each and can change membership day to day (as $81,685 has over recent cycles, resistance ↔ support) · the bottom-odds split (40/35/17/8) is a judgment synthesis, not a model output.
