

CoinPicks Market Direction

Research Package

Five pillars — four researched narratives and one pure-math read of the Bitcoin chart — scored on one standard, blended into one table, and distilled to one number. Everything in this folder is current as of **August 29, 2026** — a full weekly refresh cycle against the committed Aug 22 baseline. **This cycle's score set is a DRAFT, not yet stamped by Alex — full weekly refreshes are never auto-stamped — see the note below.**

⚠ **DRAFT — not yet stamped by Alex, August 29, 2026 (full weekly refresh).** Three qualitative pillars (CLARITY Act, Iran War Risk, Tokenization RWA) were independently re-checked and held flat — nothing found cleared the sufficiency bar to move a score. Fed & Macro re-rated down (43/41/48/56/62 → 36/35/45/55/61) on Fed Chair Warsh's hawkish Aug 28 Jackson Hole speech, confirmed via the federalreserve.gov transcript, plus a CME September hike-odds move that adversarial re-verification found was larger than first estimated (~35%→~56–58%). This is a **full weekly refresh, not a daily light-touch run** — per house rules, full weekly refreshes are never auto-stamped regardless of move size, so this draft is left for Alex's manual review independent of how any individual move would otherwise score under the delegated daily auto-stamp criteria. (A daily catch-up pull dated 2026-08-28 was run in the interim but never rendered, selfchecked, or delivered — it is abandoned and superseded by this cycle's numbers.) See the Master Report's "My Decision" section for the full rationale. The last officially stamped position remains Aug 22's +0.70 (2026-08-22_draft2, stamped by Alex August 23, 2026) until this draft is reviewed.

THE FINAL NUMBER · AUGUST 29, 2026 (DRAFT, FULL WEEKLY REFRESH) · BTC \$77,666.16

+0.64 Mild Bull — down slightly from Aug 22's committed +0.70 on the Fed & Macro re-rate

Equal-weight mean of the five window signals below — every pillar counts 20% (scale -10 to +10; horizon-weighted variant +1.18, down from Aug 22's +1.22). Positive because the far windows outweigh the near ones — **not a buy-today signal**. It is a "the storm is priced, the recovery isn't" number. Three qualitative pillars held flat this cycle; Fed & Macro re-rated down on a hawkish Jackson Hole surprise; Bitcoin TA (computed) held its confirmed near-term signal through a price round-trip — BTC \$77,666.16, essentially flat versus \$77,266.84 on Aug 22 after touching \$79,613.44 on Aug 28.

THE FIVE WINDOWS UNDERNEATH IT

WINDOW	MASTER SIGNAL	CALL
1 month	-1.41	Mild Bear — unchanged call band; Fed's deeper re-rate down and TA's firming roughly cancel
3 months	-0.88	Mild Bear — the September FOMC still sits inside this window, now repriced toward hike-more-likely-than-not
6 months	+0.36	Neutral — CLARITY/Tokenization structural strength vs. Iran's drag
1 year	+2.05	Bull — all five pillars still positive
3 years	+3.05	Strong Bull — law + adoption + cycle + valuation

Bands: |s| < 0.5 Neutral · < 1.5 Mild · < 3 Bull/Bear · < 5 Strong · else Very Strong. The Mild Bull conclusion stays positive under every leave-one-out drop (+0.25 to +1.04); dropping CLARITY or Tokenization still rounds down to **Neutral**, unchanged in structure from Aug 22. See the Master Report's Robustness section.

Reading order

Twenty minutes to the whole picture; each report stands alone and can be checked independently — every fact is dated with sources on its last page.

#	FILE	WHAT IT IS
1	CoinPicks_Master_Direction_Report.pdf	The summary. The final number, the five-window table, the full pillar matrix, where the lenses agree/fight, six weeks of dated triggers, sensitivity.
2	CoinPicks_Bitcoin_TA_Quant_Pillar_Report.pdf	The math pillar. 7 indicators on 16 years of data, halving-cycle analogs, power-law valuation — with charts. Fully reproducible from code.
3	reports/current/pdf/ — the four pillar PDFs	The story pillars. CLARITY Act · Iran War Risk · Tokenization RWA · Fed & Macro. Each: thesis, dated facts, honest bear case, dated triggers, and the full score lineage (June committed → Aug 22 committed → Aug 29 draft, this full weekly refresh cycle).
4	reports/archive/ + prior-work/	Every earlier version, preserved untouched — the score history is fully auditable.
—	run.py · engine/blend.py · data/master_blend.json	The blend engine (runnable Python — reproduce any score set with <code>run.py blend --set NAME</code>), its output, and README.md for regeneration.

How the scoring works — one paragraph

Every pillar answers the same question on five windows (1 month / 3 months / 6 months / 1 year / 3 years): **P** = the odds (0–100) that this force is *good for crypto* by then, **Quality** = how trustworthy the evidence is (0–1), and **Impact** = how hard this force moves the whole market (0–10). These combine into a **Signal = ((P – 50) ÷ 50) × Quality × Impact** (Impact is a uniform 8 for every pillar), so a coin-flip view scores zero no matter how loud the headlines are, and weak evidence can't shout. **All five pillars are equal-weighted** — the master for each window is the simple mean of the five signals (20% each; add a pillar and it auto-rebalances to 1/N) — and the Final Number averages the five master windows.

The five pillars at a glance (August 29 draft P's — full weekly refresh, three pillars held flat, Fed & Macro re-rated down)

PILLAR	1MO	3MO	6MO	1YR	3YR	ONE-LINE READ
CLARITY Act (law)	32	47	58	82	92	Held flat: Sept 15 2:15pm ET cloture vote remains the only scheduled action; no White House sign-off on the ethics text found; Polymarket drifted to 14% (price alone, not sufficient)
Iran War Risk	14	22	38	54	76	Held flat: a real new Treasury sanctions escalation named digital assets for the first time, roughly offset by Oman's own Foreign Ministry confirming a Hormuz corridor framework — nets to no score move
Tokenization (RWA)	52	60	66	74	85	Held flat: Coinbase launched non-US tokenized-stock trading, matching an already-insufficient pattern — not enough alone to move a score
Fed & Macro	36	35	45	55	61	RE-RATED DOWN: Warsh's Aug 28 Jackson Hole speech turned hawkish (confirmed via federalreserve.gov transcript) — adversarial re-verification found CME Sept hike odds moved ~35%→~56-58%, larger than first estimated; draft, flagged for review
Bitcoin TA (quant)	54	46	56	67	69	Quant pillar recomputed on today's price (BTC \$77,666.16, essentially flat vs Aug 22's \$77,266.84 after round-tripping through \$79,613 on Aug 28) — weekly composite +31.4 (Slight bullish, 5-of-7), monthly Neutral

P values shown (50 = coin flip). Three qualitative pillars held flat this cycle; Fed & Macro re-rated down on a primary-sourced, market-confirmed hawkish surprise and is left as a draft pending Alex's review.

Status & honesty notes

- **Score status:** August 29 draft (2026-08-29_draft) — a **full weekly refresh** against the committed Aug 22 baseline (2026-08-22_draft2, stamped by Alex Aug 23, 2026) — was **left as a draft at delivery**, not auto-stamped, and **flagged for Alex's manual review**. (A daily catch-up pull dated 2026-08-28 was run in the interim but never rendered, selfchecked, or delivered — it is abandoned and superseded by this cycle's numbers.) Three qualitative pillars (CLARITY Act, Iran War Risk, Tokenization RWA) were independently re-checked and held flat. Fed & Macro re-rated down on Fed Chair Warsh's hawkish Aug 28 Jackson Hole speech plus a confirmed CME September hike-odds move. This is a full weekly refresh, not a daily light-touch run — per house rules, full weekly refreshes are **never auto-stamped regardless of move size**, so it is left as a draft for Alex's manual review independent of how any individual move would otherwise score under the delegated daily auto-stamp criteria. Every report prints the full lineage (June committed → Aug 22 committed → Aug 29 draft, this cycle).
- **Verification:** facts researched with primary-source discipline (federalreserve.gov, bea.gov, sec.gov, rwa.xyz direct pulls, UKMTO-sourced reporting, U.S. Treasury OFAC releases) corroborated by 2+ independent outlets per claim. Results: Warsh's Jackson Hole hawkish tone is confirmed via the federalreserve.gov transcript and multiple independent outlets, with a clean, quantified market reaction — adversarial re-verification found the CME September hike-odds move was larger than first estimated (~35%→~56–58%, not the smaller initial read); a new Treasury sanctions escalation naming digital assets for the first time was confirmed, but its Iran War Risk impact was found to be roughly offset by Oman's own Foreign Ministry confirming a Hormuz corridor framework — net, insufficient to move the score; Coinbase's launch of non-US tokenized-stock trading was checked and found to match an already-insufficient pattern, not enough alone to move Tokenization RWA; Polymarket's CLARITY drift to 14% was checked and logged as a market price only, not sufficient alone to move a score.
- **Known limits, in print inside the reports:** cycle-analog claims rest on 3 completed cycles, a disclosed fragility this report has repeatedly flagged; the TA pillar caps its own conviction at $P = 50 \pm 25$; single-source items are labeled in-line; current chart bars are partial and the completed-bar numbers are printed; the Robustness section shows dropping CLARITY or Tokenization still lands at the Neutral/Mild-Bull boundary, unchanged in structure from Aug 22.
- **The near-term calendar is the test:** the next FOMC (with SEP/dot plot), Sept 15, 2026 — now leaning toward a hike per CME FedWatch post-Jackson-Hole (~56–58%, up from ~35% pre-speech, per this cycle's adversarial re-verification) · the first CLARITY cloture vote, precisely dated 2:15pm ET Sept 15 · an actual signed, operating Hormuz agreement the US accepts (Oman's Foreign Ministry framework so far is a corridor confirmation, not a signed US-accepted agreement) · GENIUS Act 18-month backstop effective Jan 18, 2027. Each pillar's trigger table says in advance what each outcome does to the scores.

This is research and education, not financial advice. The scores are probabilistic opinions with dated evidence — built to be argued with. If you check one thing manually, check the trigger tables: they are the falsifiable part.
