

Master Direction Report

Five Pillars, One Table, One Number — Updated & Re-verified August 29, 2026 (full weekly refresh) · Draft, awaiting Alex's manual review

*This is a FULL WEEKLY refresh against the committed Aug 22 baseline (2026-08-22_draft2, stamped by Alex Aug 23, 2026) — four independent research passes, one per qualitative pillar, each primary-source-first, followed by a dedicated adversarial-verification pass that fact-checked the four highest-stakes new claims directly against primary sources. This supersedes the 2026-08-28_draft daily catch-up cycle, which was written but never rendered, selfchecked, archived, or committed — treated as not-delivered and independently re-verified rather than trusted. CLARITY Act held flat at 32/47/58/82/92: the Sept 15 cloture vote and both binding disputes (ethics, stablecoin-yield) are unchanged. Iran War Risk held flat at 14/22/38/54/76 on a genuinely two-sided ledger — a real new escalation (Treasury's "Operation Economic Outcast" sanctions, Aug 24, explicitly naming digital assets for the first time) roughly offsets a real de-escalation upgrade (Oman's own Foreign Ministry co-confirmed a Hormuz corridor framework Aug 25, plus rising transit volume and a second straight week of falling Brent). Tokenization RWA held flat at 52/60/66/74/85: Coinbase's Aug 24 tokenized-stock launch on Base matches the same narrow, non-US-eligible pattern already ruled insufficient via the Robinhood Chain precedent. **Fed & Macro re-rated down further** than the abandoned Aug 28 draft, to 36/35/45/55/61 from the committed 43/41/48/56/62: Fed Chair Warsh's Aug 28 Jackson Hole speech is confirmed verbatim via the federalreserve.gov transcript, and adversarial re-verification of CME FedWatch found the actual September hike-odds jump was ~35% to roughly 56-58% — materially more hawkish than the ~45.7% figure the abandoned draft used. Bitcoin TA (computed) moved with today's tape: BTC \$77,666.16 (Aug 29) vs. \$77,266.84 (Aug 22), quant draft P 54/46/56/67/69. Left as draft at delivery — this is a full weekly refresh, which the runbook's delegated auto-stamp authority categorically excludes regardless of move size; **flagged for Alex's manual review**. Full score lineage (June committed → Aug 22 committed → Aug 28 draft, abandoned → Aug 29 draft) preserved in every report.*

THE FINAL NUMBER · AUGUST 29, 2026 · EQUAL-WEIGHT MODEL (DRAFT — AWAITING ALEX'S REVIEW)

+0.64

Mild Bull overall, time-arbitraged — down slightly from Aug 22's committed +0.70 on the Fed & Macro re-rate. Equal-weight mean of the five window signals (–10 max bear ... +10 max bull). Horizon-weighted 6 months, Bull at 1 year, Strong Bull at 3 years — no call band flipped versus the last committed reading. This reading is a DRAFT this cycle — flagged for Alex's manual review because this is a full weekly refresh (new data).

COINPICKS MASTER BLEND · ALL FIVE PILLARS EQUAL-WEIGHTED · 20% EACH

Compiled August 29, 2026 (full weekly refresh) · BTC \$77,666.16 (Bitstamp, August 29, 2026) · Engine: engine/blend.py — run.py blend (equal-weight, August 29 draft set, awaiting Alex's manual review) · Not Financial Advice

The Master Table

The whole thesis in five rows, on the August 29 draft set (a full weekly refresh vs. the committed Aug 22 baseline). Signal range -10 (max bear) to +10 (max bull).

WINDOW	MASTER (EQUAL-WT)	AUG 22 MASTER (COMMITTED)	THE CALL
1 month	-1.41	-1.34	Mild Bear — Fed & Macro's deeper re-rate down offsets a st
3 months	-0.88	-0.72	Mild Bear — the September FOMC still sits inside this window
6 months	+0.36	+0.40	Neutral — CLARITY and Tokenization still carry this window; l
1 year	+2.05	+2.06	Bull — all five pillars still positive; the thesis window
3 years	+3.05	+3.07	Strong Bull — law + adoption + cycle + value

Formula: per pillar, Signal = ((P - 50) ÷ 50) × Quality × Impact, with Impact a uniform 8 for every pillar. MASTER = the simple mean of all five pillar signals — equal weight, 20% each (add a pillar and it auto-rebalances to 1/N). For exact comparison. Machine-verified two ways (hand recompute of every pillar signal and every master window, cross-checked against run.py blend's own output).

THE FINAL NUMBER — HOW IT'S BUILT, AND WHAT MOVED THIS CYCLE

+0.64 = the equal-weight mean of the five MASTER signals above ((-1.41 - 0.88 + 0.36 + 2.05 + 3.05) ÷ 5). Weighting the longer windows harder (10/15/20/30/25%) gives **+1.18**, down s

reading. Three pillars (CLARITY, Iran, Tokenization) were independently re-researched this cycle and held flat on a two-sided evidence ledger; Fed & Macro re-rated down further than the aban

the specific checks run). Left as draft at delivery: this is a full weekly refresh, which the runbook's delegated daily auto-stamp authority categorically excludes regardless of how small the move

The Trend — Final Number, Cycle by Cycle

Every committed reading of THE FINAL NUMBER, in sequence — the record of how the call has actually moved, not just where it sits today. (Today's reading joins this history once archived.)

Generated by engine/history.py from every committed master_blend snapshot in reports/archive/. Rebuilt automatically on every run.py archive (or manually via run.py history).

The Full Pillar Matrix

Every pillar's signal on every window — August 29 draft scores, a full weekly refresh (each report shows the full June → Aug 22 → Aug 28 (abandoned) → Aug 29 lineage).

PILLAR (WEIGHT · IMPACT)	1 MO	3 MO	6 MO	1 YR	3 YR	
CLARITY Act (20% · 8)	−2.45	−0.41	+1.09	+4.61	+6.38	Held
Iran War Risk (20% · 8)	−3.46	−2.91	−1.34	+0.42	+2.29	Held
Tokenization RWA (20% · 8)	+0.29	+1.41	+2.18	+3.00	+3.92	
Fed & Macro (20% · 8)	−1.90	−2.04	−0.64	+0.60	+1.14	
Bitcoin TA — quant (20% · 8)	+0.48	−0.45	+0.53	+1.63	+1.52	
MASTER — mean of the five	−1.41	−0.88	+0.36	+2.05	+3.05	

P lineage (June → Jul 8 → ... → Aug 16 → 22 draft2 → 28 draft, abandoned → 29 draft) — CLARITY 55/60/65/85/92 → 52/56/61/83/92 → ... → 32/47/58/82/92 (Aug 7, committed) → **32/47/58/82/92** (Aug 29 — held flat since Aug 7, committed) → **14/22/38/54/76** (Aug 29 — held flat) · Tokenization 53/57/62/72/85 → 52/56/62/73/85 → ... → 52/60/66/74/85 (Aug 8, committed) → **52/60/66/74/85** (Aug 29 — held flat) · Fed 38/40/46/54/61 → 35/36/42/52/61 → (Aug 29 — RE-RATED DOWN further on corrected CME hike-odds data, draft) · Bitcoin TA (computed each run) 37/37/46/67/70 → ... → 49/46/54/66/69 (Aug 22 draft2) → 52/46/56/67/69 (Aug 28, abandoned) → **54/46/56/67/69** (Aug 29, committed) · MASTER row is the simple mean of the five. Full lineage back to June preserved in each pillar's own report.

The Story, Window by Window

What the blend is saying on August 29, 2026, a full weekly refresh (comparisons below are vs. the committed Aug 22 baseline, 2026-08-22_draft2)

- 1 month — Mild Bear (−1.41, down slightly from −1.34).** Iran War Risk (−3.46) and CLARITY (−2.45) held at their Aug 22 levels; Tokenization (+0.29) held; Fed & Macro fell further to −1.90 from −1.22 — Fed's deeper move drives the net change.
- 3 months — Mild Bear (−0.88, down slightly from −0.72).** Iran (−2.91), CLARITY (−0.41), and Tokenization (+1.41) held; Fed & Macro fell to −2.04 from −1.22 — the Sept 15 FOMC decision pushed the net down (−0.45).
- 6 months — Neutral (+0.36, essentially unchanged from +0.40).** Iran (−1.34), CLARITY (+1.09), and Tokenization (+2.18) held; Fed & Macro eased to −0.64 from −0.26; Bitcoin TA firmed to +0.53 from +0.48.
- 1 year — Bull (+2.05, essentially unchanged from +2.06).** All five pillars still positive: CLARITY +4.61, Tokenization +3.00, Bitcoin TA +1.63, Iran +0.42, Fed +0.60 (down from +0.72). Price net unchanged.
- 3 years — Strong Bull (+3.05, essentially unchanged from +3.07).** Every pillar still positive: CLARITY +6.38, Tokenization +3.92, Iran +2.29, Bitcoin TA +1.52, Fed +1.14 (down from +1.25). Net unchanged.

Where the Two Lenses Agree — and Where They Fight

The point of running qualitative and quantitative on the same standard

THE INDEPENDENT CONFIRMATION

Fed & Macro (judged) re-rated down further this cycle while Bitcoin TA (computed) firmed up — a real, not manufactured, divergence: P 36/35/45/55/61 (Fed, judged, re-rated down further this cycle; Bitcoin TA, computed, firmed up) — the qualitative macro read keeps turning more cautious even as the tape holds up — a genuine short-term tension this report doesn't resolve by adjusting one pillar to match the other. Iran War Risk remains the clearest risk-off vote in the set (P 14). The master resolves it honestly: Mild Bear at 1 month, unchanged in call band from Aug 22 — Fed's deeper move down and Bitcoin TA's firmed up — sanctions escalation and a real Oman-confirmed de-escalation both landed this cycle and roughly offset each other, independent of what BTC's tape is doing.

THE REAL DISAGREEMENT

Near-term: Bitcoin TA's computed near-term read (P 54/46) is now the strongest near-term pillar; Tokenization (P 52) follows; Fed & Macro (P 36/35) fell further below both this cycle on the computed tape; Iran remains the clearest risk-off vote in the set (P 14). The master resolves it honestly: Mild Bear at 1 month, unchanged in call band from Aug 22 — Fed's deeper move down and Bitcoin TA's firmed up —

Long-term: the four story pillars average about +3.4 at 3 years (CLARITY +6.38, Tokenization +3.92, Iran +2.29, Fed +1.14) versus the Bitcoin-TA pillar's +1.52 — still roughly 2.2× higher. Remember, Equal weight lets that gap show through honestly instead of burying it in a blend.

Trigger Watch — The Next Six Weeks, Re-Dated

Four independent primary-source research passes plus a dedicated adversarial-verification pass ran this cycle. Fed & Macro's Jackson Hole trigger fired and was corrected larger; Iran's ledger turned genuinely two-sided; CLARITY and Bitcoin TA's

DATE / LEVEL	EVENT
FIRE Aug 28, 10:00am ET — CONFIRMED & CORRECTED this cycle	Fed Chair Warsh's first Jackson Hole speech as Chair, adversarially re-verified verbatim against the federalreserve.gov primary transcript: cooler summer inflation prints "do not think we have meaningfully improved." Adversarial re-pull of CME FedWatch found the real September hike-odds move was ~35%→~56-58% (Motley Fool's direct 57.5% quote, CNBC's convergent 55.7% read) — larger than the ~45.7% figure used in the abandoned Aug 28 draft
FIRE Aug 24 — CONFIRMED primary	Treasury/State launched "Operation Economic Outcast" (home.treasury.gov sb0613/sb0614, OFAC action dated 20260824): ~60 entities/vessels designated across six countries; Iran named as a sanctionable sector (30 crypto addresses listed)
FIRE Aug 25 — CONFIRMED primary	Oman's own Foreign Ministry co-issued a joint statement with Iran (fm.gov.om/en/53722) on a temporary Hormuz corridor and joint mine-clearing project — a genuine upgrade; Iran claimed a deal
Checked, unchanged	CLARITY cloture vote remains dated 2:15pm ET Tuesday, Sept 15; no WH sign-off on the ethics text found; CFTC Chair Selig's Aug 20 fallback-rulemaking remarks don't touch ethics
Checked Aug 24, comparable pattern	Coinbase launched tokenized-stock trading (NVDAc/METAc/AAPLc/GOOGLc) on Base under an ADGM permission — narrow, non-US-eligible, matching the Robinhood Chain pattern; insufficient
Sept 15, 2026	Next FOMC, with SEP/dot plot — now repriced toward hike-more-likely-than-not per the corrected CME FedWatch data; also the first CLARITY Act cloture vote, precisely dated
~Aug 31	Historical average cycle-bottom month (cycle month 28.32 currently) passes

Power-law fair value \$138,805	BTC \$77,666.16 sits 44% below fair value, essentially flat vs. \$77,266.84 on Aug 22 after an intervening round trip through \$79,613 (Aug 28)
--------------------------------	---

The master flip line, unchanged from Aug 16: a confirmed new US combat death, a resumption of direct US strikes on Iran proper, independent confirmation the conflict has widened to a further new state, or a the September FOMC delivering a hike, which would confirm and extend this cycle's Fed re-rate (Fed); or the Senate returning from recess with cloture failing and no released, WH-confirmed CLARITY ethics text (C) or the US State Department releasing a full clean week would be the equivalent upside flip for Iran — not yet met despite Oman's Aug 25 confirmation. The TA flip line (weekly close under \$50,000) remains unchanged and

Robustness — Does Any One Pillar Drive the Call?

Equal weight is now the fixed model — there is no qual/quant mix knob to tune. The test that matters instead: drop any single pillar and see whether the conclusion holds.

— drop CLARITY Act	+0.33
— drop Iran War Risk	+1.04
— drop Tokenization RWA	+0.25
— drop Fed & Macro	+0.94
— drop Bitcoin TA	+0.61
all five in (headline)	+0.64

Every leave-one-out final number stays **positive** (+0.25 to +1.04) — the sign never flips negative — but two of the five drops (removing CLARITY or Tokenization, the two least-positive near-term pillars) still round down to **Neutral** or **Mild Bull** throughout. **The honest read: the "Mild Bull" headline call still leans more heavily on CLARITY and Tokenization than the other three pillars** — this cycle's deeper Fed re-rate didn't change that structure. This robustness

My Decision

DRAFT — AUGUST 29, 2026 · AWAITING ALEX'S MANUAL REVIEW · FULL WEEKLY REFRESH

MASTER: -1.41 / -0.88 / +0.36 / +2.05 / +3.05 · THE FINAL NUMBER: +0.64 (Mild Bull, time-arbitraged, draft)

This is a FULL WEEKLY refresh against the committed Aug 22 baseline (2026-08-22_draft2, stamped by Alex Aug 23, 2026) — four independent research passes, one per qualitative pillar, followed by a decision rendered, selfchecked, archived, or committed and is treated as not-delivered. Three pillars were independently re-researched and **held flat**, each on a genuinely checked (not rubber-stamped) ledger. CLARITY House sign-off on the Tillis-Gallego ethics text was found; CFTC Chair Selig's Aug 20 remarks about a fallback crypto-market-structure rulemaking (adversarially confirmed via cftc.gov) don't touch either bit of Treasury/State launched "Operation Economic Outcast" Aug 24 (adversarially confirmed directly via treasury.gov press releases and an OFAC action dated 20260824), designating ~60 entities/vessels and, for the US, offset by Oman's own Foreign Ministry co-issuing a joint statement with Iran Aug 25 on a temporary Hormuz corridor (adversarially confirmed by direct fetch of fm.gov.om/en/53722) — a genuine upgrade w/w per Lloyd's List Intelligence) and a second straight week of falling Brent (~\$87-91, down from ~\$93-95). The pillar's own upside flip line (a US-accepted deal holding a full clean week) is still not met since the windows, consistent with its standing discipline against chasing mixed single-cycle signals. Tokenization RWA at 52/60/66/74/85: Coinbase launched tokenized-stock trading (NVDaC/METaC/AAPLc/GOOGLc) on a narrow/non-US-eligible profile already established as insufficient alone via the Robinhood Chain precedent, so it's treated the same way for consistency; no new SEC/DTCC/Nasdaq dated developments or IRLs since 36/35/45/55/61 from the committed 43/41/48/56/62: Fed Chair Warsh's Aug 28 Jackson Hole speech is confirmed verbatim via the primary transcript at federalreserve.gov ("while this summer's PCE and CPI are corroborated by CNBC, PBS, Reuters, CNN, the Washington Post, and Yahoo Finance. Critically, adversarial re-verification of CME FedWatch data found the abandoned draft's cited move (~35.4%→~45.7%) to be a CNBC's "nearly 56%", a third convergent 55.7% read) cluster tightly in the high-50s, meaning the actual repricing moved further into hike-more-likely-than-not territory than previously priced. This justifies the Bitcoin TA's computed reading moved with today's tape: BTC closed at \$77,666.16 (Aug 29) vs. \$77,266.84 (Aug 22) — essentially flat after an intervening round trip through \$79,613.44 (Aug 28) — and the call is categorically: it is a full weekly refresh, and the runbook's delegated daily auto-stamp authority excludes full weekly refreshes regardless of how small or clean the moves are. No window moved more than this status here.

Read as an investment posture: don't chase the bounce this month; the windows that pay are 6-plus months out; the levels and dates that would change this are printed above — and note that this is a DRAFT awaiting Alex's manual review — the last official stamped position remains Aug 22's +0.70 (2026-08-22_draft2, stamped August 23, 2026) until reviewed.
