

COINPICKS · RESEARCH & EDUCATION

Bitcoin Technical Analysis Quant Pillar Report

The Tape Itself — Measured, Scored, and Mapped to the Pillar Standard

*Machine-computed from 16 years of daily price data through a 7-indicator scoring stack, halving-cycle analogs, and a power-law valuation model. Every number is reproducible from the scripts in the BTC-TA folder. **These numbers are computed, not judged, so they carry no draft/committed status of their own — they enter the master blend directly. This cycle's active qualitative score set is 2026-09-26_draft3, a FULL WEEKLY refresh — Iran War Risk, Fed & Macro and Tokenization were all re-rated on primary-sourced developments through Sept 26; CLARITY Act held flat — status COMMITTED BY ALEX, September 27, 2026, after his own manual review (weekly refreshes are categorically excluded from auto-stamp). Today's daily check found nothing that clears the sufficiency rule beyond what that set already prices in, so it was left untouched. See those pillar reports for the full research trail. This quant pillar's own output is unaffected by qualitative status and enters the master blend the same way regardless.***

COINPICKS QUANT PILLAR REPORT · THE QUANTITATIVE SLEEVE OF MY THESIS

Data through September 26, 2026 (BTC \$84,015.60) · Pipeline data refreshed via GitHub Actions; digest read via run.py numbers & verified September 27, 2026 (qualitative set: 2026-09-26_draft3, FULL WEEKLY refresh, committed by Alex September 27, 2026) · Not Financial Advice

The Scores — September 26 Model Output

Computed from the daily close through September 26, 2026 (full report resync September 27, 2026; previous full sync September 23, 2026) — same standard as every qualitative pillar. Weekly, monthly, and quarterly bars all remain PARTIAL this cycle; both as-is and completed-bar readings are quoted together throughout.

WINDOW	MODEL P	QUALITY	IMPACT	SIGNAL	CALL
1 month	57	0.75	8	+0.84	Mild Bull — the weekly close above the 200-week MA remains confirmed; the newly-forming week reads +55.4 as-is, +46.5 on completed bars; 1mo analog reads 1-of-3 positive, median −5.0%
3 months	60	0.70	8	+1.12	Mild Bull — the 3mo analog reads unanimous 3-of-3 positive, median +17.1%
6 months	61	0.55	8	+0.97	Mild Bull — unanimous 3-of-3 positive, median +62.7%
1 year	68	0.60	8	+1.73	Bull — the cycle turn; every prior cycle at this exact month was higher a year later (3-of-3), median +93.6%
3 years	68	0.50	8	+1.44	Mild Bull — value + cycle (36-month analog 3-of-3 positive, median +1430.4%)

Impact: 8 (the tape aggregates every driver, but adds no causal force of its own) · **Formula:** Signal = ((P − 50) ÷ 50) × Quality × Impact · **Honesty cap:** P = 50 + 25 × (window score ÷ 100) — pure TA never claims odds more than 25 points from a coin flip, because its measured out-of-sample edge is modest. Math machine-verified.

THE THREE INPUTS, IN PLAIN ENGLISH

P — the odds the tape is *good for Bitcoin* by then. Near-term still confirmed on a completed-bar basis, and the newly-forming week reads \$84,015.60 (weekly composite as-is +55.4/100, Moderate bullish, agreement 6-of-7; completed-bar weekly composite holds at +46.5); long-term still high (at this exact point in prior cycles, the next 12 months were positive 3-for-3, median +93.6%, and price sits ~40% below its power-law fair value).

Quality — how trustworthy the evidence is. Highest near-term (weekly bars of history feeding the indicator stack), lowest at 3 years (only 3 completed cycles to learn from, and this cycle is already breaking the old pattern).

Impact — 8 out of 10, now the uniform value shared by every pillar; the TA pillar carries an equal 20% weight in the master, same as each qualitative pillar. Price is the thing itself — but a mirror, not an engine.

The Claim

The thesis, and where the numbers differ from the mood

The crowd: today's daily check found nothing across the four qualitative pillars that clears the sufficiency rule beyond what the active weekly draft already prices in, so config/scores.json was left untouched — and the tape itself has drifted lower since this report's last full sync. (Price sits at \$84,015.60 on the Sept 26 close, down from \$85,488.24 on Sept 23 — a net −1.7% move over the intervening sessions, and +43.5% off the June 30 low; the tape doesn't know why price moved, only that it did.)

The model: the short-term tape eased with the price move — the weekly composite (as-is) reads Moderate bullish (+55.4, agreement 6-of-7), the monthly composite reads Neutral (+16.4, agreement 3-of-7), and the quarterly composite reads Slight bullish (+31.4, agreement 5-of-7). All three bars (weekly, monthly, quarterly) remain unclosed

this cycle, so their completed-bar composites are unchanged: weekly +46.5, monthly +1.8, quarterly +7.7. Repair Signal #1 (a weekly close above the 200-week MA) stays confirmed, though price eased against the 50-week MA (\$78,168, +7.5%, down from +9.3%). The 1-month window holds Mild Bull (P 57) with its cycle analog at 1-of-3 positive (median -5.0%); 3 months holds Mild Bull (P 60) as its analog eased slightly (3-of-3 positive, median +17.1%, down from +17.7%). The 6-month window reads Mild Bull (P 61) with the analog still unanimous (3-of-3 positive, median +62.7%, up from +59.1%). The long read sits at 1yr (68) and 3yr (68): every prior cycle at this exact month was higher 12 months later (median +93.6%, up from +89.1%), price is ~40% below fair value (\$141,272), and the froth that precedes real crashes remains absent.

The edge: the model reads three separate clocks that don't take a position on the news cycle — tape (confirmed at the weekly level, easing with the recent pullback), cycle clock (bottoming window: prior cycles bottomed at months 26–30; we're at month 29.24, past the average-bottom date), and valuation (~40% below the power-law fair line, with price sitting above the -1σ "cheap" band at \$70,568). All three clocks point the same direction on the medium-to-long horizon — the near-term clock is the one doing the day-to-day flexing, exactly as its lower Quality input says it should.

The Facts — The Tape

Computed from daily data through September 26, 2026 (BTC \$84,015.60, daily close as of September 26; report resynced September 27).

*Weekly, monthly, and quarterly bars are all still forming — scores use them as-is. Quantified: on completed bars only, weekly is **+46.5** (bar closing 2026-09-27), monthly +1.8 and quarterly +7.7 (both bars closing 2026-09-30) — all unchanged since the last full sync. Both readings are quoted deliberately — the as-is figure includes a bar that has not finished.*

- **Weekly composite +55.4/100 (Moderate bullish), agreement 6-of-7 indicators** — eased with the price drift; on completed bars only it reads +46.5, and both must be quoted together because the current bar is still forming. Price is above the 20-week (\$70,298, +19.5%) and well above the **200-week average (\$65,834, +27.6%)**; price sits above the 50-week (\$78,168, +7.5%). RSI 61.2; MACD line 835 with histogram positive (+2,763) — momentum repair continuing; %B 0.95.
- ★ **Repair signal #1 (a weekly close above the 200-week MA) remains CONFIRMED.** Price (\$84,015.60) sits +27.6% above the 200-week average (\$65,834). The weekly bar remains unclosed, still forming, closing 2026-09-27 (today); the completed-bar weekly composite holds at **+46.5**.
- **Monthly composite +16.4/100 (Neutral), agreement 3-of-7** — eased with price. Below the 20-month average (\$87,301, -3.8%), above the 50-month (\$62,265, +34.9%); RSI 53.5; monthly MACD line 755 with histogram -3,378 — still negative; %B 0.45. Completed-bar monthly composite (August's closed bar) holds at +1.8, unchanged.
- **Quarterly composite +31.4/100 (Slight bullish), agreement 5-of-7** — eased with price. Comfortably above the 20-quarter average (\$58,423, +43.8%) and the 50-quarter (\$28,846, +191.3%); RSI 58.6, MACD line 16,665 with histogram -83. Completed-bar quarterly composite is +7.7, unchanged (current bar dated 2026-09-30, still forming).
- **Levels that matter:** price (\$84,015.60) sits just below overhead resistance at \$89,164 (+6.1%, 1x touch) — the nearest test on the board — then \$98,090 (+16.8%, 2x) and \$108,330 (+28.9%, 3x). Support sits at \$81,685 (-2.8%, 2x touch), then \$74,434 (-11.4%, 1x) and \$59,930 (-28.7%, 1x) further below. The falling weekly support trendline sits at \$40,880; the falling resistance trendline sits at \$73,991, now well below current price.
- ★ **June 30 remains the cycle low: \$58,526 close** — the flush tagged the Fib golden pocket (\$54,257–\$57,802 = 61.8–65% retrace of the \$15,479 → \$126,272 run) and has since built a **+43.5% bounce to \$84,015.60. \$58,526 is still the line in the sand** — a decisive break back below it would undo this entire recovery leg.

Weekly tape, scored +55.4/100 as-is (Moderate bullish, +46.5 on completed bars only) with agreement 6 of 7 indicators: the weekly close above the 200-week MA remains confirmed, MACD histogram remains positive, price above the 50-week MA. Machine-annotated from the same data that feeds the scores.

The Facts — The Cycle Clock & The Value Floor

The two slower clocks. Same data, longer lenses.

- The halving clock says "bottoming window."** The three completed cycles topped 12–18 months after their halving (avg 15.8) and bottomed at months 26–30 (avg 28.4). This cycle topped at month 18 (Oct 6, 2025 — \$124,728) and printed its low-so-far at month 26 (June 30, \$58,526, –53% from the top). **We are at month 29.24 — past the average-bottom date.**
- ★ The cycle analogs are the spine of the long-window scores.** Standing at this exact cycle-month in C1/C2/C3: next 1 month positive **1-of-3** (median –5.0%) · next 3 months positive **3-of-3** (median +17.1%) · next 6 months positive **3-of-3** (median +62.7%) · next 12 months positive **3-of-3** (median +93.6%) · next 36 months positive **3-of-3** (median +1430.4%). *Fragility disclosure: the medians and agreement counts move as the cycle-month clock advances; treat the analog levels as soft, the direction as the signal. And know what the 36-month number is: from month ~29 that window reaches month ~65 — it contains the NEXT halving's rally.*
- 1-year momentum turned positive at months 34–37 in every completed cycle (avg 35.5) → still projects to ~April 2027 for this cycle.**
- The power-law floor:** a log-log fit over the full price series puts fair value at **\$141,272** — price is **–40%** versus fair. Fit-window honesty: starting the fit in 2011, 2012, 2013, or 2015 instead moves fair value materially (\$130,938 / \$135,850 / \$119,022 / \$145,880) — the level is soft, but the **"well below fair" verdict holds across every window tested**. Price (\$84,015.60) sits above the **–1σ band (\$70,568)** — out of the "cheap" zone (the –2σ band sits at \$35,250, far below). Every halving-era cycle trough was –77% to –85% from ATH (\$18.7K–\$28.7K

equivalent today) — the pre-halving 2011 bear went $\sim -93\%$ ($\sim \$8.7K$ equivalent), excluded from the range but in the data; this cycle's low-so-far was -53% from the ATH.

- **No froth in the system:** the altcoin-froth index reads $z = -0.87$ — the opposite of the euphoric signature that preceded prior deep crashes. Validated on 16 years of data: high-froth days led to -39% average 12-month drawdowns vs -23% for low-froth days (gap significant, 95% CI excludes zero). *Data lags ~ 6 weeks (through May 23, unchanged)* — used as a tilt, not a score input.
- ★ **What we rejected:** a 5-feature logistic crash model was tested leave-one-cycle-out and **failed** (AUC 0.44 vs 0.58 for froth alone; 0.70 = useful). It is not in this report's numbers. The scores rest only on what survived out-of-sample testing.

All four halving cycles aligned (log scale, price ÷ price-at-halving). Triangles mark where 1-year momentum turned positive in each prior cycle — months 34–37, projecting to $\sim$ April 2027 for this one. The red dot is today: month 29.24, past the historical bottoming window.

The downside map, updated after the June 30 flush: the projected \$54K–\$61K bottom zone was hit (\$58,526 close / \$57,735 intraday, inside the golden pocket's doorstep) and bounced. Odds re-weighted accordingly: ~40% the low is in, ~35% one more flush to \$54–\$58K, ~17% deeper bear, ~8% tail.

The Prize

Illustrative only — not price targets, not advice

From \$84,015.60: the 20-week average (~\$70.3K) is well behind us — price sits **+19.5%** above it; the 50-week average (\$78,168) is further behind, price sitting **+7.5%** above it. A retest of the \$124,728 ATH is **+48.5%**; the power-law fair line is **+68.1%**. The median 12-month analog from this cycle-month is now **+93.6%**; the median 36-month analog is +1430.4% — **discount that one hard**, it leans on regimes (2017 mania, post-COVID ZIRP) that don't repeat on demand.

The Prize doesn't feed the math — it tells you what the lean is worth acting on. Here it says: the near-term signal remains confirmed on a completed-bar basis and holds Mild Bull (1mo P 57) in a cycle where no qualitative pillar was re-rated today — the active weekly draft (Iran War Risk, Fed & Macro and Tokenization all moved, awaiting Alex's stamp) already prices in what's known, and this stretch's drift lower is the tape's own; the near quarter holds Mild Bull (3mo P 60), and the 6-month-and-beyond case remains unanimous (3-of-3) and firm (6mo P 61).

The Other Side

The strongest honest case the model is wrong

- **n = 3.** Every long-window claim rests on three completed cycles. Three coin flips landing heads is not a law of nature.
- **This cycle already broke the pattern.** A -53% drawdown at month 26 vs -77/-85% in prior cycles could mean dampened cycles (bullish read) — or it could mean *the bottom isn't in*: a historic-depth trough from this ATH is \$18.7K–\$28.7K, far below every level in this report.

- **The ETF era changed the machine.** Prior cycles had no spot-ETF flow channel, no CME basis trade at this scale, no corporate treasuries. Analogs may simply not transfer.
- **The power law is a curve fit, not a promise.** R^2 0.96 in-sample says nothing about a structural break — a fit like this "said cheap" through most of 2022's decline too. It bounds scenarios; it doesn't time anything.
- **The tape's edge is small by construction.** The honesty cap exists because measured predictive validity is modest (froth AUC 0.58). If you removed the cap, this report would be louder — and less true.

The Triggers

Price and dated events — some prove the read right, some prove it wrong

WHEN / LEVEL	EVENT	MEANS
\$58,526	Daily close below the June 30 low	Flush scenario live — golden pocket \$54.3–57.8K is the target; re-rate 1/3-month down
~\$65,834	Weekly close above the 200-week MA	CONFIRMED — price sits +27.6% above this level; the weekly bar remains unclosed, still forming, closing Sept 27 (today); the completed-bar weekly composite holds at +46.5
~\$78,168	Weekly close above the 50-week MA	CONFIRMED — price sits +7.5% above it, trend repair intact despite the recent drift lower
~Aug 31, 2026	Historical average-bottom month (28.4) has now passed (we're at month 29.24)	Price sits well off the June 30 low (+43.5%); a higher low + improving monthly momentum after this date = basing confirmed — August's completed monthly bar (+1.8) is an early such sign
Jan–Jul 2027	Projected 1-yr momentum turn window (point: ~Apr 2027)	Arriving without new lows = cycle thesis on track; re-rate 1-year up
\$50,000	Weekly close below	–60% from ATH; the dampened-cycle story is failing — see the flip line

The flip line: a decisive weekly close below **\$50,000** breaks the base case and the golden pocket both — treat the dampened-cycle thesis as broken and put the historic trough zone (\$18.7K–\$28.7K) back on the table. Above it, a bearish quarter is the plan, not a surprise.

My Decision

QUALITATIVE SET: COMMITTED BY ALEX — SEPTEMBER 27, 2026 (2026-09-26_draft3, FULL WEEKLY REFRESH) · THIS PILLAR: COMPUTED SEPTEMBER 26, 2026 (NO DRAFT/COMMITTED STATUS OF ITS OWN)

Computed P: 57 / 60 / 61 / 68 / 68 · Quality: 0.75 / 0.70 / 0.55 / 0.60 / 0.50 · Impact: 8 (uniform) · This pillar's signals: 1mo +0.84 · 3mo +1.12 · 6mo +0.97 · 1yr +1.73 · 3yr +1.44 · Prior computed read (Sept 23, BTC \$85,488.24): 58 / 61 / 62 / 67 / 68 · Master (equal-weight), this cycle's blend: 1mo -2.15 · 3mo -1.63 · 6mo -0.59 · 1yr +1.15 · 3yr +2.82 · THE FINAL NUMBER (this blend): -0.08 equal-weight (Neutral) / +0.47 horizon-weighted (Neutral), versus +0.02 / +0.55 on the Sept 23 committed baseline · Leave-one-out range: -0.76 to +0.59 · BTC \$84,015.60 (run.py quant, local refresh, September 26, 2026)

This is the quantitative sleeve of the thesis — the same five windows, same formula, same table as every qualitative pillar, but computed instead of judged. Weekly, monthly, and quarterly bars all remain unclosed this cycle (completed-bar composites unchanged: weekly +46.5, monthly +1.8, quarterly +7.7), and the as-is weekly composite eased to +55.4 (6-of-7) with the recent drift lower. The 1-month window holds Mild Bull (P 57) with its cycle analog at 1-of-3 positive (median -5.0%) as the cycle-month clock advanced to 29.24. The 6-month window reads Mild Bull (P 61) with its analog still unanimous (3-of-3 positive, median +62.7%). The 3-month window holds Mild Bull (P 60), its analog easing slightly (3-of-3 positive, median +17.1%, down from +17.7%). The long read sits at 1yr (68) and 3yr (68) — the direction, not the level, is the signal.

These numbers enter the master blend exactly as computed — this pillar has no override/re-stamp step of its own. Unlike the four qualitative pillars, this pillar carries no draft/committed status of its own: this cycle's active qualitative score set is 2026-09-26_draft3, a FULL WEEKLY refresh — Iran War Risk, Fed & Macro and Tokenization were re-rated on primary-sourced developments through Sept 26; CLARITY Act held flat — status COMMITTED BY ALEX, September 27, 2026, after his own manual review (weekly refreshes are categorically excluded from auto-stamp, independent of move size, which is exactly why his own review and stamp were required). Today's daily check (Sept 27) found nothing beyond what that set already prices in, so it was left untouched. This pillar's own computed output is unaffected by qualitative status and enters the master blend the same way it does every cycle.

What Changed Since Last Check

Full report resync September 27, 2026, on data through the September 26, 2026 daily close (previous full sync of this report's narrative content: September 23, 2026; the intervening 2026-09-26 weekly cycle updated only this report's My Decision box, the known staleness gap fixed that same day).

- **Today's refresh in one line:** this is an unconditional full resync of this pillar's report content, which had lagged the last three days of price data while only the decision box was kept current. BTC moved from \$85,488.24 (Sept 23) to **\$84,015.60** (Sept 26), a net -1.7% move, and the model P moved from 58/61/62/67/68 to **57/60/61/68/68**.
- **No qualitative re-rate today:** today's trigger-table check across all four qualitative pillars (CLARITY Act, Iran War Risk, Tokenization RWA, Fed & Macro) found nothing that clears the sufficiency rule beyond what the active weekly draft already prices in, so config/scores.json was left untouched. active_qual_set remains **2026-09-26_draft3** (FULL WEEKLY refresh, status COMMITTED BY ALEX, September 27, 2026).
- **No data revision this cycle:** this cycle read the current GitHub Actions relay data already committed to the repo — no conflicting prior-close values to disclose.

- **Price: \$85,488.24 (Sept 23) → \$84,015.60 (Sept 26).** A net -1.7% move over the intervening sessions; this pillar scores the tape, not the day's qualitative news.
- ★ **Repair signal #1 remains CONFIRMED:** price sits +27.6% above the 200-week average (\$65,834), despite the drift lower.
- **Weekly, monthly, and quarterly bars all remain unclosed this cycle.** Completed-bar composites: weekly +46.5, monthly +1.8, quarterly +7.7 — all unchanged since the last full sync. The now-forming (as-is) composites read: weekly +55.4 (agreement 6/7, bar closes Sept 27, today), monthly +16.4 (agreement 3/7, Neutral), quarterly +31.4 (agreement 5/7, Slight bullish). Both readings must be quoted together because the current bars are PARTIAL.
- **Model P vs Sept 23: 58/61/62/67/68 → 57/60/61/68/68.** The cycle-month clock advanced to **29.24**; the 1-month analog reads 1-of-3 positive (median -5.0%), the 3-month analog reads 3-of-3 positive (median +17.1%, down from +17.7%), and the 6-month analog remains unanimous (3-of-3, median +62.7%, up from +59.1%). Honesty note, unchanged: analogs rest on **n=3 completed cycles** and single windows flip when alignment shifts by days — the direction is the signal, the levels are soft.
- **Power-law fair value: \$140,999 (Sept 23) → \$141,272 (Sept 26)** (price now -40% vs. fair) — normal drift as new daily bars extend the fit. Fit-window sensitivity this cycle spans \$119,022 (2013 start) to \$145,880 (2015 start): quote it as a range, never a target.
- **Froth unchanged at z = -0.87**, still dated 2026-05-23 — Coin Metrics community data lags ~6 weeks, so this stays a robustness tilt, never a score input.
- **Data refreshed:** daily price data through September 26, 2026 via the GitHub Actions relay; indicators/levels/scores/cycle/mapping read via `run.py` numbers.
- **Context:** this cycle's active qualitative score set is **2026-09-26_draft3**, a FULL WEEKLY refresh, status COMMITTED BY ALEX, in which Iran War Risk, Fed & Macro, and Tokenization RWA were all re-rated on primary-sourced developments through Sept 26 while CLARITY Act held flat. That set was COMMITTED BY ALEX SEPTEMBER 27, 2026, after his own manual review — weekly refreshes are categorically excluded from auto-stamp regardless of move size, and the set's own note flagged open questions for Alex (including three competing 2026-09-26-dated score sets needing reconciliation), which his review resolved. This quant pillar is computed fresh every run regardless of qualitative status.

Method & Sources

Everything is reproducible — the scripts and data live in the BTC-TA folder. Run order below.

- **Price data:** Bitstamp OHLC API (daily, 2011–2026, no key) via [fetch_btc_history.py](#) · Coin Metrics community reference price (2010–2011 close-only) via [build_master_history.py](#) — 5,838 days total, each row tagged by source.
- **Indicator stack:** [indicators.py](#) — SMA 20/50/200, EMA 12/26, RSI-14 (Wilder), MACD 12/26/9, Bollinger 20/2, OBV — on weekly (W-SUN), monthly, quarterly bars. [levels.py](#) — swing-cluster S/R + least-squares trendlines.
- **Scoring:** [score.py](#) — each indicator → conviction in [-100, +100] (bounded inputs mapped linearly, unbounded squashed with tanh); composite = fixed weights (MA .20, RSI .15, MACD .15, BB .15, S/R .15, OBV .10, TL .10); agreement = indicators sharing the composite's sign.
- **Cycle & value:** [cycle_analysis.py](#) — halving-aligned tops/bottoms/momentum turns, projections from C1–C3 · [downside.py](#) / [downside_map.py](#) — power-law bands (R^2 0.96) + historical troughs + 6-method bottom-zone synthesis · [test_altcoin_froth.py](#) — froth quartiles vs forward drawdowns, block-bootstrap CI.
- **The mapping (new):** [pillar_mapping.py](#) — window scores from tape composites + cycle analogs + power-law value; $P = 50 + 25 \times (S/100)$; Quality rubric per window; writes `data/pillar_scores.json` for the master blend.
- **Run order:** `fetch_btc_history` → `build_master_history` → `fetch_altcoin_data` → `indicators` → `levels` → `score` → `charts` → `cycle_analysis` → `downside` → `downside_map` → `pillar_mapping`.
- **Honesty notes:** weekly/monthly/quarterly bars are all partial as of Sept 26 (completed-bar composites: weekly +46.5, bar closing Sept 27 / monthly +1.8, August's bar having closed / quarterly +7.7, current bar still forming) · the multi-signal crash model failed out-of-sample (AUC 0.44) and is excluded · the AUC figures are the pipeline's own attestation · froth data lags ~6 weeks · n=3 on

all cycle claims, and analog windows can cross into the next cycle · the 2024 halving is dated Apr 19 (US ET; block 840,000 hit Apr 20 00:09 UTC — 0.03 cycle-month effect) · S/R levels are algorithmic swing-clusters with 1–2 touches each · the bottom-odds split (40/35/17/8) is a judgment synthesis, not a model output.
