

Master Direction Report

Five Pillars, One Table, One Number — Updated & Re-verified August 20, 2026 (catch-up cycle, DRAFT — awaiting my stamp)

*This cycle covers the Aug 16-20 gap: an Aug 17 draft was written but never delivered (no report/render/archive/commit followed it), and an Aug 18 draft was also written but never delivered. No cycle ran Aug 19. Today independently re-verifies both undelivered drafts against fresh primary sources and lands a new dated set rather than editing either stale draft in place. CLARITY Act HELD FLAT at 32/47/58/82/92 (unchanged since Aug 7): the Sept 15 cloture vote is unchanged; Sen. Gallego said Aug 20 the White House's ethics-proposal responses "have come back blank, weaker than before, or not at all" — reaffirming, not worsening, the known stalemate. Tokenization HELD FLAT at 52/60/66/74/85 (unchanged since Aug 8): rwa.xyz's total RWA value is flat at \$38.07B; an Aug 17 SEC/White House/CFTC meeting floated an exploratory tokenized-stock exemption, explicitly non-final, logged not scored. Fed & Macro HELD FLAT at 43/41/48/56/62 (unchanged since Aug 13): the Jul 28-29 FOMC minutes (published Aug 19) show a hawkish bloc broader than the three known dissenters, offset by CME FedWatch's September-hold odds rising to ~65% post-minutes — two signals that roughly cancel; jobless claims and H.4.1 (due today) were unconfirmed as of this run. **Iran War Risk RE-RATED DOWN to 16/24/38/54/76** (from the Aug 16 committed 20/28/41/56/77): the 60-day Hormuz MoU window lapsed Aug 18 without a signed deal, and the UAE reported Iran fired two ballistic missiles at its territory Aug 18 (Iran denies it) — the first direct attack reported on the UAE since May — with the UAE suspending all economic ties with Iran in response. Bitcoin TA (computed) improved sharply on a BTC surge to \$71,882.92 (+14.2% vs Aug 16). **Left as a DRAFT this cycle, not auto-stamped:** although no window moved more than 8 points and no call band flipped, Iran War Risk's evidence includes a genuinely novel escalation (a new state directly targeted for the first time) that doesn't cleanly fit the routine pattern Alex's standing delegated auto-stamp authority (in effect since 2026-08-06) is meant to cover — flagged prominently for manual review rather than auto-stamped. Full score lineage (June committed → every draft through August 20, still awaiting stamp) preserved in every report.*

THE FINAL NUMBER · AUGUST 20, 2026 · EQUAL-WEIGHT MODEL (DRAFT — AWAITING MY STAMP)

+0.68

Mild Bull overall, time-arbitraged — the 1-month window remains Mild Bear, same call band as Aug 16, even as Iran War Risk re-rated down and Bitcoin TA improved sharply. Equal-weight mean of the five call bands underneath: Mild Bear at 1 month, Mild Bear at 3 months, Neutral at 6 months, Bull at 1 year, Strong Bull at 3 years — every call band identical to Aug 16's committed reading. The number holds because Bitcoin TA's evidence is novel, not routine — see My Decision below.

COINPICKS MASTER BLEND · ALL FIVE PILLARS EQUAL-WEIGHTED · 20% EACH

Compiled August 20, 2026 · BTC \$71,882.92 (Bitstamp, last completed daily close, August 20, 2026) · Engine: engine/blend.py — run.py blend (equal-weight, August 20 draft set, awaiting stamp) · Not Financial Advice

The Master Table

The whole thesis in five rows, on the August 20 draft set (a catch-up cycle covering the Aug 16-20 gap). Signal range -10 (max bear) to +10 (max bull).

WINDOW	MASTER (EQUAL-WT)	AUG 16 MASTER	THE CALL
1 month	-1.40	-1.41	Mild Bear — unchanged call band; Iran's re-rate down and Bitcoin TA's sharp improvement
3 months	-0.74	-0.82	Mild Bear — the September FOMC still sits inside this window
6 months	+0.37	+0.31	Neutral — CLARITY and Tokenization still carry this window; Iran still drags harder
1 year	+2.07	+2.14	Bull — all five pillars still positive; the thesis window
3 years	+3.09	+3.12	Strong Bull — law + adoption + cycle + value

Formula: per pillar, Signal = ((P - 50) ÷ 50) × Quality × Impact, with Impact a uniform 8 for every pillar. MASTER = the simple mean of all five pillar signals — equal weight, 20% each (add a pillar and it auto-rebalances to 1/N). For exact comparison. Machine-verified two ways.

THE FINAL NUMBER — HOW IT'S BUILT, AND WHAT MOVED

+0.68 = the equal-weight mean of the five MASTER signals above ((-1.40 - 0.74 + 0.37 + 2.07 + 3.09) ÷ 5). Weighting the longer windows harder (10/15/20/30/25%) gives **+1.22**, unchanged, even though two of the five pillars moved for real this cycle: Iran War Risk re-rated down (60-day Hormuz MoU lapsed, UAE directly targeted for the first time) while Bitcoin TA's computed bearish to Neutral). These two real moves happen to land on roughly opposite sides and largely cancel at the MASTER level — CLARITY, Tokenization, and Fed & Macro all held flat after independence (Changed for the specific checks run). **Left as a DRAFT this cycle, not auto-stamped — flagged for Alex's manual review — because Iran War Risk's evidence includes a genuinely novel the routine daily-move pattern the standing delegated auto-stamp authority (2026-08-06) is meant to cover, even though no window moved more than 8 points and no call band**

The Trend — Final Number, Cycle by Cycle

Every committed reading of THE FINAL NUMBER, in sequence — the record of how the call has actually moved, not just where it sits today. (Today's draft reading is not yet in this history — it will join once stamped.)

Generated by engine/history.py from every committed master_blend snapshot in reports/archive/. Rebuilt automatically on every run.py archive (or manually via run.py history).

The Full Pillar Matrix

Every pillar's signal on every window — August 20 draft scores, a catch-up cycle covering the Aug 16-20 gap (each report shows the full June → ... → August 20 lineage).

PILLAR (WEIGHT · IMPACT)	1 MO	3 MO	6 MO	1 YR	3 YR	
CLARITY Act (20% · 8)	-2.45	-0.41	+1.09	+4.61	+6.38	
Iran War Risk (20% · 8)	-3.26	-2.70	-1.34	+0.42	+2.29	
Tokenization RWA (20% · 8)	+0.29	+1.41	+2.18	+3.00	+3.92	
Fed & Macro (20% · 8)	-0.95	-1.22	-0.26	+0.72	+1.25	
Bitcoin TA — quant (20% · 8)	-0.60	-0.78	+0.18	+1.63	+1.60	
MASTER — mean of the five	-1.40	-0.74	+0.37	+2.07	+3.09	

P lineage (June → Jul 8 → ... → Aug 13 → 16 → 20) — CLARITY 55/60/65/85/92 → 52/56/61/83/92 → ... → 32/47/58/82/92 (Aug 7, committed) → **32/47/58/82/92** (Aug 20, draft — held flat for a thirteenth straight touch) · Iran 50/55/16/24/38/54/76 (Aug 20, draft — re-rated down: MoU lapsed, UAE targeted) · Tokenization 53/57/62/72/85 → 52/56/62/73/85 → ... → 52/60/66/74/85 (Aug 8, committed) → **52/60/66/74/85** (Aug 20, draft — held flat) · Fed 38/40/45/50/55/60/65/70/75 (Aug 20, draft — held flat, FOMC minutes mixed) · Bitcoin TA (computed each run) 37/37/46/67/70 → ... → 41/36/45/68/71 (Aug 16) → **45/43/52/67/70** (Aug 20 — near-term P up sharply on the tape's improvement, 1yr/3yr P ticked down slightly as the MASTER row is the simple mean of the five. Full lineage back to June preserved in each pillar's own report.

The Story, Window by Window

What the blend is saying on August 20, 2026, a catch-up cycle (comparisons below are vs. the Aug 16 committed baseline)

- 1 month — Mild Bear (−1.40, was −1.41).** Two real moves this cycle largely offset: Iran War Risk fell further (−2.88 → −3.26) on the lapsed Hormuz MoU and the UAE missile-attack report, v (−2.45), Tokenization (+0.29), and Fed & Macro (−0.95) all held flat.
- 3 months — Mild Bear (−0.74, was −0.82).** Same pattern: Iran (−2.29 → −2.70) and Bitcoin TA (−1.57 → −0.78) move opposite directions and roughly cancel; CLARITY (−0.41), Tokenization (+0.29), and Fed & Macro (−0.95) all held flat.
- 6 months — Neutral (+0.37, was +0.31).** Iran (−1.01 → −1.34) and Bitcoin TA (−0.44 → +0.18) again move opposite ways; CLARITY (+1.09), Tokenization (+2.18), and Fed (−0.26) held. Historically, the Fed & Macro pillar has been the most volatile.
- 1 year — Bull (+2.07, was +2.14).** All five pillars still positive: CLARITY +4.61, Tokenization +3.00, Bitcoin TA +1.63, Fed +0.72, Iran +0.42 (down from +0.62 — the dip-buy thesis at this pillar was before the surge. The window the whole thesis is built around, essentially unmoved in call band.
- 3 years — Strong Bull (+3.09, was +3.12).** Every pillar still positive: CLARITY +6.38, Tokenization +3.92, Iran +2.29, Bitcoin TA +1.60, Fed +1.25. A structural window this cycle's tactical news, and the tape's improvement, are pulling in opposite directions at the same time. This report does not resolve that tension by adjusting either pillar to match the other.

Where the Two Lenses Agree — and Where They Fight

The point of running qualitative and quantitative on the same standard

THE INDEPENDENT CONFIRMATION

Fed & Macro (judged) and Bitcoin TA (computed) diverged at the near end this cycle, worth noting honestly: P 43/41/48/56/62 (Fed, judged, held flat) vs 45/43/52/67/70 (Bitcoin TA, computed, held flat) — time in weeks, purely on price action rather than new macro data. Iran War Risk remains the worst 1-month signal in the set by a wide margin (−3.26), now further from CLARITY (−2.45, the deteriorating regional conflict) and the tape (a sharp BTC rally) are pulling in opposite directions at the same time. This report does not resolve that tension by adjusting either pillar to match the other.

THE REAL DISAGREEMENT

Near-term: Tokenization is still the strongest near-term pillar (P 52); Bitcoin TA's computed near-term read (P 45/43) is now essentially tied with Fed & Macro (P 43/41); CLARITY remains below the tape (P 32/47) and got worse this cycle (P 16, down from 20). The master resolves it honestly: Mild Bear at 1 month, unchanged in call band from Aug 16 only because two real moves offset — not because of the tape's improvement. **Long-term:** the four story pillars average about +3.5 at 3 years (CLARITY +6.38, Tokenization +3.92, Iran +2.29, Fed +1.25) versus the Bitcoin-TA pillar's +1.60 — still roughly 2.2× higher. Remember, Equal weight lets that gap show through honestly instead of burying it in a blend.

Trigger Watch — The Next Six Weeks, Re-Dated

Two named triggers fired this cycle (the Hormuz MoU lapse and the FOMC minutes); the UAE missile-attack report is a fresh, unresolved development, not a settled trigger. These are the forward triggers; each pillar report carries the full lineage.

DATE / LEVEL	EVENT
Fired Aug 18	The 60-day Hormuz MoU window lapsed without a signed deal; Iran says the US "began violating the memorandum"; Trump threatens Oman
Fired Aug 18, disputed	UAE reports Iran fired two ballistic missiles at its territory — first direct attack on the UAE since May; Iran denies it, calls it a possible false-flag; UAE suspends all economic ties with Iran
Fired Aug 19	FOMC minutes from the Jul 28-29 meeting: hawkish bloc broader than the 3 known dissenters, offset by CME FedWatch's September-hold odds rising to ~65%
Checked, unchanged	CLARITY cloture vote remains dated 2:15pm ET Tuesday, Sept 15; Sen. Gallego (Aug 20) reaffirms the ethics-proposal stalemate, not new deterioration
Checked, not found	rwa.xyz total RWA value flat at \$38.07B; Aug 17 SEC/White House meeting on tokenized-stock exemptions remains explicitly non-final
Aug 20 (today)	Jobless claims (week ended Aug 15) and Fed H.4.1 balance-sheet release (week ended Aug 19) — both due, neither confirmed published as of this run
Aug 21	GENIUS Act joint CIP (Customer Identification Program) rulemaking comment period closes
Pending	Actual signing of a Hormuz agreement the US accepts — the compensation/blockade/sanctions disputes are the thing to watch, not either side's unilateral announcements; independent refutation) of the UAE missile-attack claim
Sept 15	First CLARITY Act procedural (cloture) vote, precisely dated 2:15pm ET; zero confirmed Democratic yes votes as of Aug 20
~Aug 31	Historical average cycle-bottom month (cycle month 28.0 currently) passes

Power-law fair value \$138,020

BTC \$71,882.92 sits 48% below fair value (was 54% below on Aug 16)

The master flip line, unchanged from Aug 16: a confirmed new US combat death, a resumption of direct US strikes on Iran proper, independent confirmation the conflict has widened to a further new state, or a would reverse the Fed read (Fed); or the Senate returning from recess with cloture failing and no released, WH-confirmed CLARITY ethics text (CLARITY) — any one of these firing would be a genuine escalation, not upside flip for Iran. The TA flip line (weekly close under \$50,000) remains unchanged and is now far from current price.

Robustness — Does Any One Pillar Drive the Call?

Equal weight is now the fixed model — there is no qual/quant mix knob to tune. The test that matters instead: drop any single pillar and see whether the conclusion holds.

— drop CLARITY Act	+0.39
— drop Iran War Risk	+1.08
— drop Tokenization RWA	+0.31
— drop Fed & Macro	+0.87
— drop Bitcoin TA	+0.75
all five in (headline)	+0.68

Every leave-one-out final number stays positive (+0.31 to +1.08) — the sign never flips negative — but two of the five drops (removing CLARITY or Tokenization, the two least-positive near-term pillars) still round down to Neutral or Mild Bull throughout. The honest read: the "Mild Bull" headline call still leans more heavily on CLARITY and Tokenization than the other three pillars — this cycle's real moves in Iran War Risk (down) and Bitcoin TA (up) didn't specifically to catch a single pillar (or two) quietly driving the whole call; and it continues to flag the same two.

My Decision

DRAFT — AUGUST 20, 2026 (CATCH-UP CYCLE) · AWAITING MY STAMP — FLAGGED FOR MANUAL REVIEW

MASTER: -1.40 / -0.74 / +0.37 / +2.07 / +3.09 · THE FINAL NUMBER: +0.68 (Mild Bull, time-arbitraged, draft)

This cycle covers the Aug 16-20 gap. An Aug 17 draft was written but never delivered (no report/render/archive/commit followed it). An Aug 18 draft was also written but never delivered. No cycle ran Aug 19-20 as ground truth, and lands a new dated set per the runbook's new-day rule. CLARITY Act held at 32/47/58/82/92: the Senate remains in August recess, the cloture vote remains dated 2:15pm ET Tuesday Aug 18 (no "come back blank, weaker than before, or not at all") reaffirm rather than worsen the known ethics stalemate. Tokenization held at 52/60/66/74/85: a direct rwa.xyz pull shows total RWA value flat at \$38.07B as of Aug 18. SEC/White House/CFTC meeting floated an exploratory tokenized-stock exemption with explicitly no final framework or date announced — logged as a watch item, not scored. Fed & Macro held at 43/41/47/58/69/77: broader than the three known dissenters ("many participants assessed that policy tightening would likely be necessary if inflation did not decline"), offset by CME FedWatch's September-hold probability rising to 80% (consistent with this pillar's discipline against chasing single prints; jobless claims (week ended Aug 15) and H.4.1 (week ended Aug 19), both due today, were unconfirmed published as of this run and carry no weight). Aug 20/28/41/56/77: the report's own 60-day Hormuz MoU window (dated from the June 18 signing) lapsed Monday Aug 18 without a signed deal, with Iran's foreign ministry now saying the US "began violating international law" after firing two ballistic missiles at its territory Aug 18 — the first direct attack reported on the UAE since May — which Iran denies, calling it a possible false-flag, and the UAE responded by suspending all trade, and suspending all flights to and from the UAE. Bitcoin TA's computed reading improved sharply on BTC's surge to \$71,882.92 (+14.2% vs Aug 16) — the weekly composite flipped from bearish (−29.0, 5-of-7 bearish indicators) to Neutral (+9.9, 4-of-7), and the weekly bar has not yet closed. This score set is left as a DRAFT this cycle and flagged prominently for my manual review, rather than auto-stamped, even though no window moved more than 8 points. The escalation vector — a state (the UAE) reportedly targeted directly for the first time in this conflict, with a live, unresolved dispute over attribution (Iran denies it) — that does not cleanly fit the routine, well-trodden path to cover. Per the runbook's own guidance, when a situation is genuinely novel or ambiguous, the default is to leave it as a draft and say why, not to lean on the delegation as a blanket license to skip judgment. The report does not adjust Iran's score to match the tape, and flags the divergence rather than resolving it quietly.

Read as an investment posture: don't chase the bounce this month; the windows that pay are 6-plus months out; the levels and dates that would change this are printed above — and note that this is awaiting Alex's manual review and stamp — it is not yet the system's official stamped position.
